Gold Miners: Our Coverage Is Expensive Despite Raising Our Near-Term Gold Price Assumptions Again

Analyst Note Jon Mills, CFA, Equity Analyst, 15 Apr 2026

After reaching another historical high around USD 5,400 per ounce in January, gold belied its safe haven status by falling 20% in response to the Iran war, before recovering to around USD 4,800 now. The fall was driven by ETF outflows: ETFs tend to be procyclical and the marginal buyers or sellers.

Why it matters: But gold is still up since we last updated our assumed prices. We now assume it averages USD 4,900 to 2028, from USD 4,700, based on the futures curve. Our assumed midcycle price remains about USD 2,050 from 2030 based on our estimate of the marginal cost of production.

- We also raise our Uncertainty Ratings for no-moat Newmont, Barrick, and Agnico Eagle to High, from Medium, consistent with our High ratings for no-moat Kinross, Northern Star, Evolution, and Perseus. All are highly leveraged to the gold price, which is the biggest driver of their fair values.

The bottom line: Increased near-term gold price assumptions drive no-moat Kinross's fair value estimate up 5% to USD 10 per share. Our fair value estimates for no-moat Newmont, Barrick, and Agnico Eagle each rise 3% to USD 72, USD 31, and USD 93 per share, respectively.

- But foreign-exchange movements since our last update have broadly offset higher near-term gold prices for no-moat Northern Star and Evolution. Their fair values are unchanged at AUD 15 and AUD 4.70, respectively.
- Perseus's estimate rises by 7% to AUD 3.20 per share after it surprised us by selling its troubled

Business Description

Agnico Eagle is a gold miner with mines in Canada, Mexico, Finland, and Australia. Agnico operated just one mine, LaRonde, as recently as 2008 before bringing its other mines online in rapid succession in the following years. It merged with Kirkland Lake Gold in 2022, acquiring the Detour Lake and Macassa mines in Canada along with the high-grade, low-cost Fosterville mine in Australia. It sold around 3.4 million gold ounces in 2025 and had about 15 years of gold reserves at end 2025. Agnico Eagle is focused on increasing gold production in lower-risk jurisdictions and bought the remaining 50% of its Canadian Malartic mine along with the Wasamac project and other assets from Yamana Gold in 2023.

Meyas Sand project in Sudan for more than double our valuation, despite the ongoing civil war in the country.

Big picture: Our gold coverage is materially overvalued by about 40% to 240% as the market projects the very strong gold bull market in recent years to continue. Spot gold has tripled since September 2022, and is more than double our assumed long-term or midcycle price of around USD 2,050.

- It is also significantly above both historical prices and cost support.

Business Strategy & Outlook Jon Mills, CFA, Equity Analyst, 15 Apr 2026

Agnico Eagle is one of the world's largest gold miners by production, operating mines in Canada, Mexico, Finland, and Australia, reflecting the company's focus on lower-risk jurisdictions. Its four cornerstone assets each produce roughly 350,000-700,000 ounces of gold annually, consisting of Detour Lake, Canadian Malartic, Meadowbank, and Meliadine. All four are in Canada. These mines accounted for around 60% of the company's sales of 3.4 million ounces of gold in 2025, with the company also producing minor amounts of copper, zinc, and silver. Agnico Eagle had about 15 years of gold reserves at the end of 2025.

While Agnico's portfolio has some low-cost mines led by Macassa, LaRonde, and Detour Lake, these are more than offset by its remaining, higher-cost mines. The company's average all-in sustaining cost, including byproduct credits, of roughly USD 1,340 per ounce in 2025 places Agnico at around the 25th percentile of the gold industry cost curve.

Agnico Eagle has expanded from one operating mine in 2008 to 11 mines in four countries. The merger of equals with Kirkland Lake Gold in 2022 added the high-grade, low-cost Fosterville mine in Australia along with the Detour Lake and Macassa mines in Canada. Agnico Eagle further expanded in 2023 by purchasing the remaining 50% of its Canadian Malartic mine in Canada along with the Wasamac project and various exploration assets from Yamana Gold.

The company has numerous development projects that will likely see it materially increase production by the early-to-mid-2030s. We forecast gold sales volumes rising to around 4 million ounces midcycle, from 3.4 million in 2025, led by expansions at Canadian Malartic and Detour Lake along with the likely development of its Hope Bay project.

Bulls Say Jon Mills, CFA, Equity Analyst, 15 Apr 2026

- Agnico Eagle has around 15 years of reserves at end December 2025, with various opportunities to increase gold production in coming years.
- For investors seeking gold miners with lower geopolitical risk, Agnico Eagle's mines are in relatively stable and mining-friendly countries of Canada, Mexico, Finland, and Australia.
- Gold stocks tend not to follow general economic cycles. They can also provide a hedge to inflation risk.

Bears Say Jon Mills, CFA, Equity Analyst, 15 Apr 2026

- While it is located around the 25th percentile of the gold cost curve, it is still meaningfully leveraged to changes in the gold price.
- We think the company paid a full price for the remaining 50% of the Canadian Malartic mine and other assets acquired from Yamana Gold in 2023.
- Gold is subject to the whims of investors' sentiment, who can move as a herd and impact the gold price.

Economic Moat Jon Mills, CFA, Equity Analyst, 15 Apr 2026

As a commodity producer, Agnico Eagle is a price-taker and needs low-cost mines with long lives and a low installed capital base to support the longer-term excess returns needed to justify an economic moat. We assign a no-moat rating to Agnico Eagle.

MORNINGSTAR®

Agnico Eagle Mines Ltd AEM ★ 15 Apr 2026 06:01, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
302.65 CAD 14 Apr 2026	130.00 CAD 15 Apr 2026 05:56, UTC	2.33	151.62 CAD Bil 14 Apr 2026	None	Large Blend	High	Standard	14 Apr 2026 05:00, UTC

Its gold all-in sustaining cost of around USD 1,340 per ounce in 2025 places it around the 25th percentile of the gold AISC curve. Due to the flatness of the industry cost curve, only miners in the lowest quartile tend to enjoy a material operating cost advantage. And that would need to be paired with an efficiently invested capital base and long reserve life to warrant a moat. Agnico Eagle's costs are not low enough to justify a moat, and so we don't think the company exhibits a low-cost advantage.

Agnico Eagle's adjusted return on invested capital is below its weighted average cost of capital, or WACC. We have included around USD 1.1 billion in asset and intangibles writedowns on the basis that the impairments relate to assets developed or acquired in the ordinary course of business and so should be included when calculating ROIC as they are a normal part of doing business as a gold miner. Agnico's inflated invested capital base makes it unlikely that the firm will maintainably generate economic returns in excess of its cost of capital, even if operating costs were to materially fall. However, if the company were able to move into the lowest quartile of the cost curve, we would consider revisiting its moat rating.

The company averaged ROIC in the 10 years ended Dec. 31, 2025, of about 7.5%. ROIC averaged around 10% in the five years ended Dec. 31, 2025, and we estimate that Agnico Eagle will generate a ROIC in the mid-single digits in 2030, below its WACC of about 7%. Forecast below WACC returns support our qualitative no-moat assessment.

In terms of commodity prices used for our forecasts, our respective midcycle assumptions for gold and copper are about USD 2,050 per ounce and USD 3.80 per pound from 2030, based on our estimate of the marginal costs of production. We also assume silver prices of about USD 37 per ounce midcycle from 2030, being 1/55th of our assumed midcycle gold price. We assume zinc averages about USD 1.55 per pound from 2027 based on spot.

Fair Value and Profit Drivers Jon Mills, CFA, Equity Analyst, 15 Apr 2026

We increase our fair value estimate for no-moat Agnico Eagle to CAD 130 per share, from CAD 125, due to higher gold prices and currency movements since our last update.

We now assume gold averages around USD 4,900 per ounce from 2026 to 2028 based on the futures curve, up from about USD 4,700. Our assumed midcycle price is about USD 2,050 per ounce from 2030. This is based on our estimate of the long run marginal cost of production.

Cuing off the futures curve, our assumed average copper price from 2026 to 2028 falls to about USD 5.65 per pound, from around USD 5.85. Based on our estimate of the long run marginal cost of production, we assume a midcycle price of about USD 3.80 per pound from 2030.

We also assume silver averages about USD 65 per ounce from 2027 based on spot, reverting to around

MORNINGSTAR®

Agnico Eagle Mines Ltd AEM ★ 15 Apr 2026 06:01, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
302.65 CAD 14 Apr 2026	130.00 CAD 15 Apr 2026 05:56, UTC	2.33	151.62 CAD Bil 14 Apr 2026	None	Large Blend	High	Standard	14 Apr 2026 05:00, UTC

USD 37 per ounce midcycle from 2030, 1/55th of our assumed midcycle gold price.

Cash flow is discounted at a 7.6% weighted average cost of capital, based on a long-term capital structure comprising 25% debt and 75% equity. We assume an 8.9% long-term cost of equity, reflecting gold's lack of systematic risk and correlation to GDP. We apply a 5.4% pretax cost of debt, reflecting what we expect Agnico Eagle's long-term cost of debt will be in a normalized interest-rate environment. Our implied enterprise value/EBITDA terminal multiple of 8 is in line with that of its senior gold-mining peers.

Risk and Uncertainty Jon Mills, CFA, Equity Analyst, 15 Apr 2026

Our Uncertainty Rating for Agnico Eagle is High, reflecting cyclical gold prices, operating leverage, and high capital intensity, partly offset by a strong balance sheet. It is highly leveraged to gold prices, which are a key determinant of future returns for shareholders. Another key driver is likely to be the company's investments, given the capital-intensive nature of the industry and the challenges of investing with a backdrop of cyclical gold prices.

All-in sustaining costs, including byproduct credits, at end-December 2025 are USD 1,340 per gold ounce, below the industry average and around the 25th percentile of the gold cost curve. A strong balance sheet provides further support as gold prices fluctuate.

Investment and jewelry make up most of global gold demand, and a demand slowdown is the key risk to cash flows. Gold prices tend to be relatively uncorrelated to the broader economic cycle. Gold has perceived countercyclical, safe-haven investment attributes and is seen as an inflation hedge. The key risk for gold is that, unlike most commodities that are consumed, virtually all the gold ever mined still exists. This makes gold subject to the whims of investors' sentiment, who can move as a herd.

With its exposure exclusively in Canada, Mexico, Finland, and Australia, Agnico's geographic exposure is limited to generally stable, mining-friendly jurisdictions. As a result, we think it faces less geopolitical risk than many of its peers. Furthermore, with most of its development projects located in Canada, we anticipate Agnico's exposure to Canada to only increase, cementing its lower level of geopolitical risk.

Gold mining carries many ESG risks, including risks from labor strikes, disagreements with local governments and communities, and the ever-present risk of mine accidents. In the longer term, the threat of environmental and community groups to new mining approvals could risk Agnico's social license.

Capital Allocation Jon Mills, CFA, Equity Analyst, 15 Apr 2026

We assign a Standard Capital Allocation Rating to Agnico Eagle based on our framework that assesses the balance sheet, investment decisions, and shareholder distributions.

We view its balance sheet as very strong, with net cash of about USD 2.7 billion at the end of December

MORNINGSTAR®

Agnico Eagle Mines Ltd AEM ★ 15 Apr 2026 06:01, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
302.65 CAD 14 Apr 2026	130.00 CAD 15 Apr 2026 05:56, UTC	2.33	151.62 CAD Bil 14 Apr 2026	None	Large Blend	High	Standard	14 Apr 2026 05:00, UTC

2025. We think its balance sheet will remain strong over our forecast period.

We see Agnico Eagle's investments as fair. However, operating in an industry where companies struggle to create moats weighs on its ability to strengthen its competitive advantage and generate economic profits through investment.

Finally, we think distributions are appropriate. The company has paid dividends since 1983 and also has a share repurchase program. Agnico pays a regular quarterly dividend of USD 0.45 as of Dec. 31, 2025. We think the combination of dividends and share repurchases is an appropriate way to return cash to shareholders.

Ammar Al-Joundi became CEO shortly after the completion of the Kirkland Lake Gold merger in February 2022. Under longtime CEO Sean Boyd, who was CEO from 1998-2022, Agnico transformed from a one-mine company into a multiple-mine gold producer with an attractive geographic profile and relatively low political risk. Up until recently, the company generally focused acquisitions on earlier-stage projects rather than mines already in operation, which helps minimize the risk of overpaying for assets. However, the merger with Kirkland Lake Gold in 2022 increased Agnico Eagle's gold production by 70%. Despite Kirkland Lake Gold being one of the lowest-cost gold producers in the industry and increasing Agnico's gold reserves by nearly 80%, we think Agnico Eagle overpaid for the company, with former Kirkland Lake Gold shareholders owning 46% of the combined entity. In our view, the acquisition of various assets from Yamana in 2023 was also at a full price. However, we see the logic in gaining full control of Canadian Malartic and the potential to further increase production in Canada, one of the most stable mining jurisdictions in the world.

Analyst Notes Archive

Gold Miners: We Raise Our Near-Term Gold Price Assumptions, but Our Coverage Is Overvalued Jon Mills, CFA,Equity Analyst,13 Jan 2026

After a brief pullback in October, the gold price resumed its relentless rise and is now trading at yet another historical high of around USD 4,600 per ounce. Concerns over the Fed's independence add to strong ETF and central bank purchases and ongoing US fiscal deficits as major tailwinds. Why it matters: Based on the futures curve, we now assume average prices of about USD 4,700 per ounce from 2026 to 2028, up from USD 4,000. We also roll forward our assumed midcycle price to 2030, from 2029, being about USD 2,050 based on our estimate of the long-run marginal cost of production. The bottom line: Higher assumed near-term gold prices see the fair value estimates for our gold coverage rise by between 9% and 14%. But the higher gold price is more than reflected in the shares, and our coverage is materially overvalued by between 60% and 265%. Our fair value estimate for no-moat Agnico Eagle rises 14% to USD 80 per share. Our fair value estimates for no-moat Newmont, Kinross, and Evolution increase 13% to USD 70, USD 9, and AUD 4.50, respectively. Our updated estimate for no-moat Barrick is

MORNINGSTAR®

Agnico Eagle Mines Ltd AEM ★ 15 Apr 2026 06:01, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
302.65 CAD 14 Apr 2026	130.00 CAD 15 Apr 2026 05:56, UTC	2.33	151.62 CAD Bil 14 Apr 2026	None	Large Blend	High	Standard	 14 Apr 2026 05:00, UTC

now USD 30, up 11%, while no-moat Northern Star's and Perseus' estimates rise 9% to AUD 15 and AUD 3, respectively. Between the lines: Even with unit cash costs increasing across the industry in recent years due to inflation, the historically high gold price means we forecast higher near-term margins across our coverage compared to their historical averages. However, we assume margins return to around their historical averages midcycle, albeit adjusted where applicable for forecast changes in production volumes of existing mines and the company's mine portfolio. Along with our assumption that the gold price returns to being driven by fundamentals based on supply and demand rather than by price-insensitive central bank purchases and pro-cyclical ETF flows, this accounts for the material overvaluation of our gold coverage.

Agnico Eagle Earnings: Almost Double a Year Ago as the Gold Bull Market Continues Jon Mills, CFA,Equity Analyst,30 Oct 2025

Agnico Eagle's 2025 third-quarter adjusted net profit after tax of USD 1.1 billion, or USD 2.16 per share, is roughly double last year. Higher average realized gold prices are the driver, more than offsetting increased unit cash costs on steady volumes. Why it matters: The firm declared an unchanged quarterly USD 0.40 dividend. Guidance is maintained, though due to stronger gold prices, unit cash costs are likely to be toward the top end of the guided range due to increased royalties (which are a cost despite being based on revenue). Along with the result, this broadly met our expectations. The bottom line: We retain our fair value estimate for no-moat Agnico Eagle of USD 70 per share, with shares screening as materially overvalued, trading on a forward price/earnings ratio of 20. This seems a rich multiple to us given the stratospheric gold price and flat production outlook. Elevated gold prices are a major driver—spot gold is about USD 4,000 per ounce, about 10% below recent historical highs, but way above where it has traditionally traded. We also think the market likes its solid production and unit cost control record, unlike say Newmont and Barrick. Between the lines: We like its focus on internal rather than inorganic growth but believe there's room to raise cash returns to shareholders—most obviously the quarterly dividend of USD 0.40, steady since early 2022 despite spot gold more than doubling, and earnings more than tripling. The balance sheet is very strong with net cash of USD 2.2 billion at end-September 2025. For example, doubling the quarterly dividend to USD 0.80 would cost an additional USD 800 million per year, easily manageable, though the 2% forward yield would still be mediocre. We think increased dividends are better for shareholders than continuing to repurchase shares trading at more than twice fair value in a record bull market for gold.

Our Coverage of Miners Is Expensive Despite Increasing Our Near-Term Gold Price Assumptions Jon Mills, CFA,Equity Analyst,3 Oct 2025

The gold bull market continues. Now around USD 3,850 per ounce, gold is up 47% so far in 2025 and near historical highs. Safe-haven buying is a major driver, led by strong ETF and central bank purchases, with ongoing US fiscal deficits, a weaker US dollar, and lower real interest rates assisting.

Agnico Eagle Mines Ltd AEM ★ 15 Apr 2026 06:01, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
302.65 CAD 14 Apr 2026	130.00 CAD 15 Apr 2026 05:56, UTC	2.33	151.62 CAD Bil 14 Apr 2026	None	Large Blend	High	Standard	14 Apr 2026 05:00, UTC

Why it matters: We now assume gold averages about USD 3,700 per ounce from 2025 to 2027 based on the futures curve, up from around USD 3,450. However, our assumed midcycle gold price is unchanged, at about USD 2,000 per ounce from 2029, based on our estimate of the marginal cost of production. The bottom line: Despite increases to our fair value estimates driven by higher near-term gold price assumptions, our gold miners' coverage is materially overvalued. We raise our fair value for no-moat Newmont to USD 62 and for no-moat Kinross Gold to USD 8 per share, both up 7%. Our updated estimates for no-moat Agnico Eagle, Barrick, and Perseus Mining are USD 70, USD 27, and AUD 2.75, respectively, up 6%. We also increase our fair value estimates for no-moat Evolution Mining and Northern Star by 5% to AUD 4.00 and AUD 13.70 per share, respectively. Big picture: After generally lagging the rising gold price, miner shares have risen dramatically in 2025, from 55% for Northern Star to 175% for Kinross as investors project historically high gold prices far into the future. We acknowledge that the short-term tailwinds supporting prices, exacerbated by exchange-traded fund purchases, tend to be procyclical, and central banks are generally not price-sensitive. We also acknowledge gold's other attributes of being a store of value and medium of exchange, unlike most other commodities. However, in the longer term, we expect the price of gold to return to its fundamentals, based on supply/demand. Higher prices incentivize new supply and dampen demand, pushing gold toward the long-run marginal cost of production, which we view as about USD 2,000 per ounce midcycle from 2029.

Agnico Eagle Earnings: Again Strong on Elevated Gold Prices Jon Mills, CFA,Equity Analyst,31 Jul 2025

Agnico Eagle reported second-quarter adjusted EBITDA of USD 1.9 billion, up 63% from a year ago, as 40% higher gold prices more than offset lower volume and higher unit cash costs. Adjusted net profit after tax of USD 980 million, or USD 1.94 per share, was up about 80%.Why it matters: The company reiterated guidance and is tracking broadly in line with our unchanged forecast for volume of about 3.4 million ounces, which is the guidance midpoint and similar to last year. We also still forecast all-in sustaining costs including byproduct credits of USD 1,350 per ounce, at the top end of guidance, adjusted for the higher gold prices than Agnico's USD 2,500 estimate. This is 9% higher than 2024, driven by inflation and higher royalties due to increased gold prices.The bottom line: We retain our USD 66/CAD 90 fair value estimate for no-moat Agnico Eagle. The shares trade 87% above our fair value estimate as investors project gold prices staying near historical highs into perpetuity. We are more cautious, given the strong gold bull market recently. Gold is up 25% in 2025 and has doubled since October 2022. At around USD 3,300 per ounce, it is materially above our assumed midcycle price of about USD 2,000 from 2029 based on our estimate of the marginal cost of production.Key stats: The balance sheet is pristine, as it should be at this point in the cycle. Despite having net cash of USD 1 billion at the end of June, management is sensibly rejecting material mergers and acquisitions in favor of extending its existing mines while returning excess cash to shareholders. Our only quibble is that we would prefer the unchanged quarterly dividend of USD 0.40 per share be raised in place of share repurchases, given our view that the shares are materially overvalued.

Gold Miners: Barrick the Cheapest After Updating Our Gold Price Forecasts Jon Mills, CFA,Equity Analyst,8 Jul 2025

The gold price has been on a tear in 2025, rising 27% to USD 3,330 per ounce, close to historical highs. Safe-haven buying is likely the main driver, with investors concerned about tariffs and geopolitical uncertainty, as well as the US fiscal deficit. Why it matters: After updating our forecasts, we assume gold averages USD 3,460 per ounce from 2025 to 2027 based on the futures curve, up from around USD 3,170. Our assumed midcycle gold price from 2029 is about USD 2,000 per ounce based on our estimate of the marginal cost of production The bottom line: No-moat Barrick's fair value estimate rises 6% to USD 25.50 and it screens as the cheapest of our gold coverage, trading 15% below fair value. This is likely due to its ongoing dispute with the Mali government over the tax and regulatory framework governing its Loulo-Gounkoto operations. Higher gold prices see no-moat Perseus' fair value estimate increase by 9% to AUD 2.55 per share. We also incorporate recent five-year production guidance. No-moat Newmont and Kinross Gold's fair value estimates rise 5% and 7%, respectively, to USD 58.00 and USD 7.50, respectively. Our updated fair value for no-moat Agnico Eagle is USD 66 and for Evolution is AUD 3.80, both up 6%. However, no-moat Northern Star's fair value remains AUD 13. Higher gold prices are broadly offset by lower near-term volumes and increased unit cash costs and capital expenditure. Big picture: Other than Barrick and Newmont, which is modestly overvalued, the remainder of coverage is materially overvalued by between 29% and 114%. We think this is because investors are projecting elevated gold prices to continue. However, we think central bank purchases, which have been strong in recent years, will normalize and ETF flows, which tend to be procyclical, will likely return to broadly neutral. Along with increases in both mined and recycled supply in response to elevated prices, we expect a long-term price significantly below spot of USD 3,330.

Mined Commodities: Barrick Undervalued; Most Other Gold Miners Expensive on High Gold Prices Jon Mills, CFA,Equity Analyst,28 May 2025

Demand from China has been the main driver of rising commodity prices in the past two decades. More recently, gold is close to historical highs on safe-haven demand. However, driven by weak China steel end-user demand and slower global growth, most other commodity prices have fallen. Why it matters: Prices nevertheless remain generally elevated versus the 20-year average, as well as relative to cost support. Costs tend to loosely track commodity price changes, albeit with a lag. Unit costs have risen in recent years, driven by rising commodity prices and cost inflation. After many years of focusing on returning excess cash to shareholders—with gold miners being the notable exception, instead focusing on mergers and acquisitions—elevated commodity prices are now encouraging miners to tilt toward growth, particularly in energy transition commodities. The bottom line: Our fair values are retained, with wide dispersion across our coverage. Coal miners are cheap, led by Glencore and Whitehaven, and so is minerals sands miner Iluka. However, driven by gold prices near historical highs, gold miners are

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
302.65 CAD 14 Apr 2026	130.00 CAD 15 Apr 2026 05:56, UTC	2.33	151.62 CAD Bil 14 Apr 2026	None	Large Blend	High	Standard	14 Apr 2026 05:00, UTC

generally expensive, with Barrick the exception. In our iron ore coverage, Mineral Resources and Vale trade at material discounts to fair value, while Deterra is also cheap. Lower near-term lithium prices see most of our lithium coverage significantly undervalued, led by Lithium Argentina and Albemarle. Big picture: Durable competitive advantages are rare in mining, and our coverage reflects this. Wide-moat Deterra Royalties and narrow-moat lithium miners, including Sociedad Quimica y Minera and Albemarle, are some exceptions. Long view: In the longer term, commodity prices should trade close to the marginal cost of production, which is generally around the 90th percentile of the industry cost curve. Between the lines: For further details, please see our "Industry Landscape: Mining" published May 27, 2025.

ESG Risk Rating Breakdown

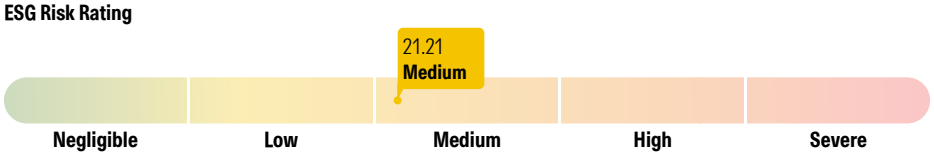

- Exposure represents a company's vulnerability to ESG risks driven by their business model
- Exposure is assessed at the Subindustry level and then specified at the company level
- Scoring ranges from 0-55+ with categories of low, medium, and high-risk exposure

- Management measures a company's ability to manage ESG risks through its commitments and actions
- Management assesses a company's efficiency on ESG programs, practices, and policies
- Management score ranges from 0-100% showing how much manageable risk a company is managing

ESG Risk Rating

ESG Risk Ratings measure the degree to which a company's value is impacted by environmental, social, and governance risks, by evaluating the company's ability to manage the ESG risks it faces.

1. A company's Exposure to material ESG issues 2. Unmanageable Risk refers to risks that are inherent to a particular business model that cannot be managed by programs or initiatives 3. Managed Risk = Manageable Risk multiplied by a Management score of 72.1% 4. Management Gap assesses risks that are not managed, but are considered manageable 5. ESG Risk Rating Assessment = Overall Unmanaged Risk = Management Gap plus Unmanageable Risk

ESG Risk Rating Assessment[5]

ESG Risk Rating is of Apr 14, 2026. Highest Controversy Level is as of Apr 08, 2026. Sustainalytics Subindustry: Gold. Sustainalytics provides Morningstar with company ESG ratings and metrics on a monthly basis and as such, the ratings in Morningstar may not necessarily reflect current Sustainalytics' scores for the company. For the most up to date rating and more information, please visit: sustainalytics.com/esg-ratings/.

Peer Analysis 14 Apr 2026

Peers are selected from the company's Sustainalytics-defined Subindustry and are displayed based on the closest market cap values

MORNINGSTAR®

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, indepth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss shortterm market-price movements), but we believe these negatives are mitigated by deep analysis and our longterm approach.

Morningstar's equity research group ("we," "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our singlepoint star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

When considering a company's moat, we also assess whether there is a substantial threat of value destruction, stemming from risks related to ESG, industry disruption, financial health, or other idiosyncratic issues. In this context, a risk is considered potentially value destructive if its occurrence would eliminate a firm's economic profit on a cumulative or midcycle basis. If we deem the probability of occurrence sufficiently high, we would not characterize the company as possessing an economic moat.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in workingcapital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

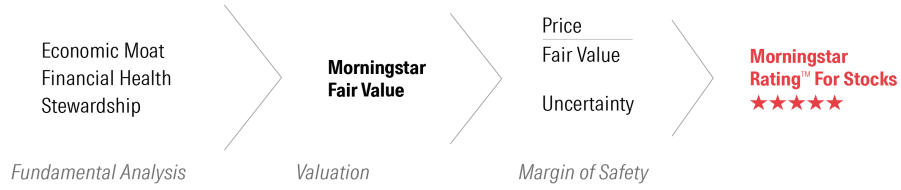

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total present value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty Around That Fair Value Estimate

Morningstar's Uncertainty Rating is designed to capture the range of potential outcomes for a company's intrinsic value. This rating is used to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating is aimed at identifying the confidence we should have in assigning a fair value estimate for a given stock.

Our Uncertainty Rating is meant to take into account anything that can increase the potential dispersion of future

MORNINGSTAR®

Research Methodology for Valuing Companies

outcomes for the intrinsic value of a company, and anything that can affect our ability to accurately predict these outcomes. The rating begins with a suggested rating produced by a quantitative process based on the trailing 12-month standard deviation of daily stock returns. An analyst overlay is then applied, with analysts using the suggested rating, historical rating data, and their own knowledge of the company to inform them as they make the final Uncertainty Rating decision. Ultimately, the rating decision rests with the analyst. Analysts take into account many characteristics when making their final decision, including cyclical factors, operational and financial factors such as leverage, company-specific events, ESG risks, and anything else that might increase the potential dispersion of future outcomes and our ability to estimate those outcomes.

Our recommended margin of safety—the discount to fair value demanded before we'd recommend buying or selling the stock—widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the potential dispersion of outcomes, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the Uncertainty Rating provides guidance in portfolio construction based on risk tolerance.

Our Uncertainty Ratings are: Low, Medium, High, Very High, and Extreme.

	Margin of Safety	
Qualitative Analysis Uncertainty Ratings	★★★★★Rating	★Rating
Low	20% Discount	25% Premium
Medium	30% Discount	35% Premium
High	40% Discount	55% Premium
Very High	50% Discount	75% Premium
Extreme	75% Discount	300% Premium

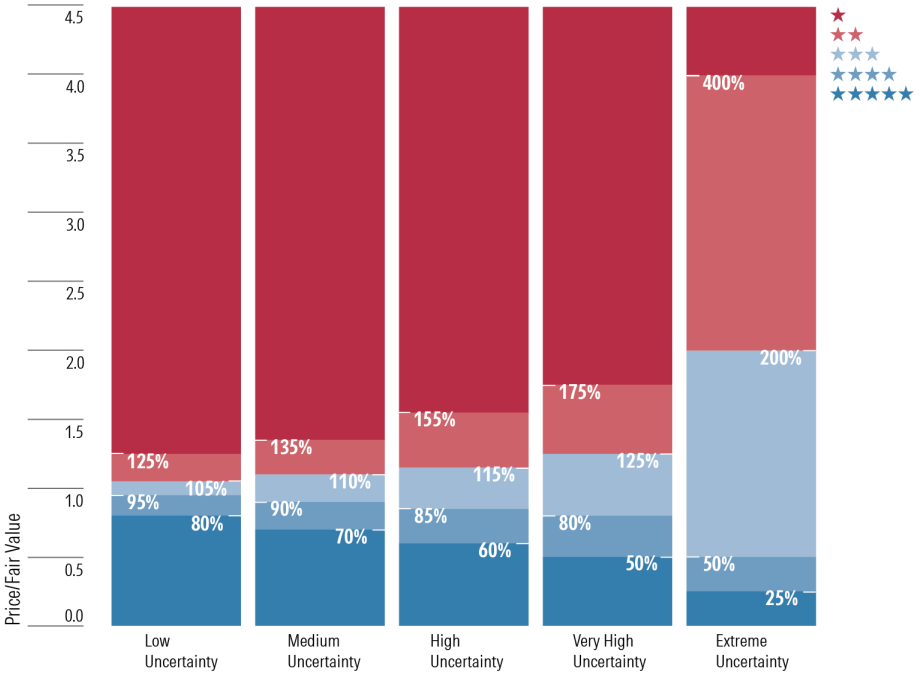

Our uncertainty rating is based on the interquartile range, or the middle 50% of potential outcomes, covering the 25th percentile–75th percentile. This means that when a stock hits 5 stars, we expect there is a 75% chance that the intrinsic value of that stock lies above the current market price. Similarly, when a stock hits 1 star, we expect there is a 75% chance that the intrinsic value of that stock lies below the current market price.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more details about our methodology, please go to https://shareholders.morningstar.com

Morningstar Equity Research Star Rating Methodology

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

★★★★★ We believe appreciation beyond a fair risk adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

★★★★ We believe appreciation beyond a fair risk-adjusted return is likely.

★★★ Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

★★ We believe investors are likely to receive a less than fair risk-adjusted return.

★ Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments,

Research Methodology for Valuing Companies

and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments, and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Sustainalytics ESG Risk Rating Assessment: The ESG Risk Rating Assessment is provided by Sustainalytics; a Morningstar company.

Sustainalytics' ESG Risk Ratings measure the degree to which company's economic value at risk is driven by environment, social and governance (ESG) factors.

Sustainalytics analyzes over 1,300 data points to assess a company's exposure to and management of ESG risks. In other words, ESG Risk Ratings measures a company's unmanaged ESG Risks represented as a quantitative score. Unmanaged Risk is measured on an open-ended scale starting at zero (no risk) with lower scores representing less unmanaged risk and, for 95% of cases, the unmanaged ESG Risk score is below 50.

Based on their quantitative scores, companies are grouped into one of five Risk Categories (negligible, low, medium, high, severe). These risk categories are absolute, meaning that a 'high risk' assessment reflects a comparable degree of unmanaged ESG risk across all subindustries covered.

The ESG Risk Rating Assessment is a visual representation of Sustainalytics ESG Risk Categories on a 1 to 5 scale. Companies with Negligible Risk = 5 Globes, Low Risk = 4, Medium Risk = 3 Globes, High Risk = 2 Globes, Severe Risk = 1 Globe. For more information, please visit sustainalytics.com/esg-ratings/

Ratings should not be used as the sole basis in evaluating a company or security. Ratings involve unknown risks and uncertainties which may cause our expectations not to occur or to differ significantly from what was expected and should not be considered an offer or solicitation to buy or sell a security.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of the report is Morningstar Research Services LLC, a U.S.A. domiciled financial institution.

This Report is for informational purposes, should not be the sole piece of information used in making an investment decision, and has no regard to the specific investment objectives, financial situation or particular needs of any specific recipient. This publication is intended to provide information to assist investors in making their own investment decisions, not to provide investment advice to any specific investor. Therefore, investments discussed herein may not be suitable for all investors; investors must exercise their own independent judgment as to the suitability of such investments and recommendations in the light of their own investment objectives, experience, taxation status and financial position. Morningstar encourages Report recipients to read all relevant issue documents (e.g., prospectus) pertaining to the security concerned, including without limitation, information relevant to its investment objectives, risks, and costs before making an investment decision and when deemed necessary, to seek the advice of a financial, legal, tax, and/or accounting professional. The information, data, analyses and opinions presented herein are not warranted to be accurate, correct, complete or timely. Unless otherwise provided in a separate agreement, neither Morningstar, Inc. or the Equity Research Group represents that the report contents meet all of the presentation and/or disclosure standards applicable in the jurisdiction the recipient is located.

Except as otherwise required by law or provided for in a separate agreement, the analyst, Morningstar, Inc. and the Equity Research Group and their officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions within the report.

The Report and its contents are not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Morningstar, Inc. or its affiliates to any registration or licensing requirements in such jurisdiction.

Where this report is made available in a language other than English and in the case of inconsistencies between the English and translated versions of the report, the English version will control and supersede any ambiguities associated with any part or section of a report that has been issued in a foreign language. Neither the analyst, Morningstar, Inc., or the Equity Research Group guarantees the accuracy of the translations.

This report may be distributed in certain localities, countries and/or jurisdictions ("Territories") by independent third parties or independent intermediaries and/or distributors ("Distributors"). Such Distributors are not acting as agents or representatives of the analyst, Morningstar, Inc. or the Equity Research Group. In Territories where a Distributor distributes our report, the Distributor is solely responsible for complying with all applicable regulations, laws, rules, circulars, codes and guidelines established

MORNINGSTAR®

Research Methodology for Valuing Companies

by local and/or regional regulatory bodies, including laws in connection with the distribution third-party research reports.

Conflicts of Interest

- No interests are held by the analyst with respect to the security subject of this investment research report.
- Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com
- Analysts' compensation is derived from Morningstar, Inc.'s overall earnings and consists of salary, bonus and in some cases restricted stock.
- Neither Morningstar, Inc. or the Equity Research Group receives commissions for providing research nor do they charge companies to be rated.
- Morningstar's overall earnings are generated in part by the activities of the Investment Management and Research groups, and other affiliates, who provide services to product issuers.
- Morningstar employees may not pursue business and employment opportunities outside Morningstar within the investment industry (including but not limited to, working as a financial planner, an investment professional or investment professional representative, a broker-dealer or broker-dealer agent, a financial writer, reporter, or analyst) without the approval of Morningstar's Legal and if applicable, Compliance teams.
- Neither Morningstar, Inc. or the Equity Research Group is a market maker or a liquidity provider of the security noted within this report.
- Neither Morningstar, Inc. or the Equity Research Group has been a lead manager or co-lead manager over the previous 12-months of any publicly disclosed offer of financial instruments of the issuer.
- Morningstar, Inc.'s investment management group does have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them.
- Morningstar, Inc. is a publicly traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section https://shareholders.morningstar.com/investor-relations/financials/sec-filings/default.aspx
- Morningstar, Inc. may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar, Inc.'s conflict of interest policies is available from http://global.morningstar.com/equitydisclosures. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

Risk Warning Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security's investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions.
