Boralex: Dropping Coverage

Analyst Note Joshua Aguilar, Director, 20 Apr 2026

We will discontinue analyst coverage of Boralex on or about May 11, 2026.

We provide analyst research and ratings on over 1,600 companies globally and periodically adjust our coverage according to investor interest and staffing.

Business Strategy & Outlook Joshua Aguilar, Director, 27 Mar 2026

Boralex is an independent power producer focused on the development and operation of renewable energy projects in Canada, US, UK, and France.

We view Boralex as a strong renewable energy developer amid increasing competition. We credit the company for its historical focus on under-the-radar and generally smaller projects compared with peers.

Boralex's 2030 strategic plan relies primarily on organic growth to meet its target for 7 gigawatts of capacity. We see growth opportunities across its focus geographies, including Canada, the US, the UK, and France. We expect it to pursue a diversified mix of onshore wind, solar, and battery storage projects to achieve its growth plan.

Boralex's growth has traditionally been split evenly between organic and inorganic investment. We expect this split to largely remain consistent over the next few years, with a slight shift toward organic

Sector Utilities

Industry Utilities - Renewable

Business Description

Boralex is a power producer whose core business is dedicated to the development and operation of renewable energy projects in Canada, France, the United States, and the United Kingdom. Boralex owns power generation assets across four technologies: wind, solar, hydroelectric, and thermal. Substantially all of its operating assets are subject to indexed fixed-price energy sales contracts.

development over time. We prefer renewable developers to focus on organic growth, since it generally produces stronger returns than acquisitions.

Consistent with the broader renewable energy industry, Boralex is targeting an increasing percentage of its offtake contracts to be with corporate customers. Historically, renewable energy projects have been underwritten by governments or utilities. However, increasing interest from corporate customers is expected to account for a growing proportion of project offtake. Further, we expect the vast majority of Boralex's power output (approximately 90%) to be contracted as opposed to merchant.

Bulls Say Joshua Aguilar, Director, 27 Mar 2026

- Boralex has a history of being a disciplined developer of renewable energy projects.
- The company employs a conservative capital structure and low payout ratio relative to peers.
- Boralex offers investors exposure to the growing worldwide adoption of renewable energy.

Bears Say Joshua Aguilar, Director, 27 Mar 2026

- Boralex's long-term strategy seeks to expand its solar presence, where it has limited experience.
- The large amounts of money looking to invest in renewable projects increases competition for projects, compressing returns.
- Boralex lacks the scale of larger industry peers.

Economic Moat Joshua Aguilar, Director, 27 Mar 2026

We do not believe that Boralex possesses an economic moat. We view the company as a strong developer of renewable energy projects, particularly onshore wind, but see limited competitive advantages in renewable energy development overall.

Development of renewable energy assets can be characterized by fierce competition and thin returns above cost of capital. Potential moat sources include intangible assets via long-term contracts and scale advantages but are reserved for a select few companies, in our view.

The renewable energy industry enjoyed robust returns in its early days as competition was sparse and subsidies were high. However, much more competition has compressed returns in recent years. This is coupled with limited barriers to entry—particularly for onshore renewables such as wind and solar—where the average project size and complexity is much smaller than traditional thermal power plants.

Boralex lacks the scale of renewable giants such as NextEra but attempts to compensate for this with a focus on niche development. The company has 2 gigawatts of operating wind assets across Canada and France, which gives it top-five market share in each country, albeit in a highly fragmented landscape.

The French wind market highlights Boralex's strategy: French wind projects can take five to seven years

to become operational, given lengthy regulatory requirements. We view this under-the-radar focus favorably and expect legacy assets to generate excess returns thanks to intangible assets in the form of long-term contracts (average of 13 years across its portfolio). However, given Boralex's ambitious growth trajectory, including doubling its wind portfolio by 2030, we do not view this advantage for legacy projects as extending to new development.

We do not believe Boralex's solar segment warrants an economic moat. The company has only entered the solar market within the past few years. However, Boralex's long-term growth targets are heavily focused on solar. The company expects solar to account for nearly 50% of its total capacity in 2030, up from less than 10% in 2020. We view solar development as generally less moaty compared with onshore wind, given fewer barriers to entry. Solar projects tend to be simple to construct and have smaller average project sizes. Boralex's increasing long-term focus on solar gives us further pause with regard to its moat characteristics.

MORNINGSTAR®

Boralex Inc Class A BLX ★★★ 17 Apr 2026 22:34, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
36.64 CAD 17 Apr 2026	37.00 CAD 25 Mar 2026 23:45, UTC	0.99	3.78 CAD Bil 20 Apr 2026	None	Small Growth	Medium	Standard	14 Apr 2026 05:00, UTC

We do think Boralex's hydro assets have a narrow moat. We believe hydro power plants have attractive moat characteristics thanks to their long useful lives (100 years), relatively low operating costs, and dispatch capabilities (in the case of pumped hydro). In addition, new hydro assets are extremely difficult to build, given needed regulatory approvals, supporting an efficient scale moat source. However, hydro represents less than 10% of company EBITDA with limited growth opportunities.

Fair Value and Profit Drivers Joshua Aguilar, Director, 27 Mar 2026

Our fair value estimate is CAD 37 per share. We recently raised it to reflect Brookfield Renewable's proposed all-cash acquisition of Boralex.

Our five-year explicit forecast assumes financial results in line with management's 2030 targets. We expect broad-based growth across technologies and geographies, consistent with Boralex's strategic priorities.

We forecast average revenue per megawatt-hour to decline modestly as new projects are placed into service, with generally lower contracted rates than legacy projects.

Long-term key profit drivers for Boralex include power prices and the efficiency of its capital investment program. We project declining capital expenditures per megawatt in our forecast period, consistent with past experience with renewable energy.

Risk and Uncertainty Joshua Aguilar, Director, 27 Mar 2026

We assign Boralex a Medium Morningstar Uncertainty Rating. Its largest risks relate to wind resource, interest rates, long-term power prices, and foreign exchange.

Boralex has a concentrated asset base in Canadian and French onshore wind projects. Onshore wind projects have high resource variability, which can cause volatility in Boralex's financial results. For example, Boralex's results in 2016 and 2018 were adversely affected by low wind resource, which resulted in a payout ratio well above its target range.

Long-term power prices and interest rates are risks for owners of long-duration power generation assets, such as Boralex. Boralex's near-term cash flow generation is protected from contracts (power purchase agreements), but cash flow beyond the contracted term will be exposed to prevailing power prices.

Boralex is exposed to foreign-exchange risks via its global footprint. We expect this consideration to grow in the future as the company's Canadian portfolio shrinks relative to its European and US operations.

Boralex's primary environmental, social, and governance risk relates to social risks pertaining to

renewable project development. Renewable projects are subject to local community support, but we do not view this as having a material risk to our fair value estimate.

Capital Allocation Joshua Aguilar, Director, 27 Mar 2026

We assess Boralex's Capital Allocation Rating as Standard based on its balance sheet strength, investment record, and shareholder distribution policy.

Boralex has taken a conservative approach to financing its business, resulting in a strong balance sheet. The company largely utilizes project-level debt to finance capital expenditures and has largely eschewed extensive use of corporate debt financing. Available liquidity as of year-end 2025 was CAD 681 million.

Boralex typically pursues development projects that are smaller in size or have elongated development timelines. This has led to returns on invested capital above those of similar-size peers. However, this approach may need to evolve as the company seeks to expand its geographic and technology presence. Therefore, acquisitions are likely to continue as part of the company's growth strategy. We generally expect lower returns from acquisitions than from organic development.

We view Boralex's approach to equity distributions to be appropriate. The company takes a conservative approach toward its dividend payout ratio relative to peers. It targets a payout ratio of 30%-50%, well below peers that are generally above 60%-70%. This allows the company to retain a greater percentage of cash flows for reinvestment.

In addition to internal cash flow, Boralex has historically utilized equity issuance as an additional source of funds.

Analyst Notes Archive

Boralex: Strategic Review Corroborates Our Undervalued View Brett Castelli,Senior Equity Analyst,24 Mar 2026

Boralex shares rose 8% on March 23 after media reports, including by Bloomberg, indicated the company is exploring going private. Boralex published a press release last night confirming a strategic review by its board of directors, while mentioning that such a review may not result in a transaction. Why it matters: We have viewed Boralex as undervalued for much of the past 18 months as the market's interest in renewable energy firms has fizzled. As such, we applaud the strategic review by the board and see merit in going private given the unaccommodating public markets. It's worth noting Boralex's peer Innergex was taken private in 2025 by CDPQ (La Caisse). La Caisse is also the largest shareholder in Boralex, with an approximate 15% stake. The bottom line: We are maintaining our CAD 32 for Boralex as we await further details on a potential transaction. With shares up more than 15% in the past two days, we now view shares as fairly valued.

36.64 CAD 17 Apr 2026	37.00 CAD 25 Mar 2026 23:45, UTC	0.99	3.78 CAD Bil 20 Apr 2026	None	Small Growth	Medium	Standard	14 Apr 2026 05:00, UTC

Boralex Earnings: Lower Pricing Continues To Weigh on Results Brett Castelli,Senior Equity Analyst,2 Mar 2026

Boralex reported fourth-quarter EBITDA of CAD 203 million, up 7% year over year. The increase was driven by higher French wind production, partially offset by lower pricing. Why it matters: Lower pricing associated with its French wind portfolio continues to weigh on results as pricing normalizes from elevated levels in recent years. The firm sees further pricing headwinds in 2026, before they abate. Despite the increase year on year, production in the quarter was 7% below anticipated levels, driven by general weakness across the portfolio. Boralex's portfolio growth continued in the quarter with two battery storage projects in Ontario, totaling 380 megawatts, beginning operations. The firm added to its secured projects pipeline with a 200-megawatt solar project in New York and a 125-megawatt storage project in Ontario. The bottom line: We are lowering our fair value estimate to CAD 32 from CAD 35 for no-moat Boralex. The primary driver of our lower valuation is decreased pricing assumptions. We view Boralex as a disciplined developer of renewable energy projects within its core markets of the US, Canada, the UK, and France. Coming up: The firm announced the appointment of Philippe Bonin as its new CFO, effective March 16. On the development front, we will be watching results in Canada and the US as the firm looks to progress toward its 2030 capacity target of 7 gigawatts, compared to 3.8 gigawatts at year-end 2025.

Boralex Earnings: Lower Pricing Weighs on Results; Shares Undervalued Brett Castelli,Senior Equity Analyst,10 Nov 2025

Boralex reported third-quarter EBITDA of CAD 108 million, down 1% year over year. The modest decline was due to lower power prices in its French portfolio. Why it matters: Lower-than-anticipated generation was also a headwind in the quarter, which saw generation 13% below anticipated levels due to weakness in the North American wind and solar assets. Boralex's portfolio growth continued in the quarter with the 100 megawatt Apuiat wind farm in Quebec beginning operations. Additionally, two storage projects in Ontario are slated for commissioning in the fourth quarter. The firm added to its development pipeline with 125 megawatts of projects awarded in the latest French onshore wind auction, the most of any participant. The bottom line: We are maintaining our CAD 35 fair value estimate for no-moat Boralex. We view shares as undervalued. Boralex remains a disciplined developer of renewable energy projects, but we think the market is overlooking its value currently as it focuses on a resurgence of traditional generation technologies. Key stats: Boralex's growth path grew by approximately 150 megawatts sequentially, ending at approximately 1 gigawatt. The main addition was a 250 megawatt solar project in New York, which is slated to begin operations beyond 2027.

Boralex Earnings: CFO Departure Overshadows Results Brett Castelli,Senior Equity Analyst,8 Aug 2025

Boralex reported second-quarter EBITDA of CAD 145 million, down 7% year over year. The decline was

MORNINGSTAR®

Boralex Inc Class A BLX ★★★ 17 Apr 2026 22:34, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
36.64 CAD 17 Apr 2026	37.00 CAD 25 Mar 2026 23:45, UTC	0.99	3.78 CAD Bil 20 Apr 2026	None	Small Growth	Medium	Standard	14 Apr 2026 05:00, UTC

due to weaker-than-expected wind generation in France and the US, as well as lower pricing in France. Why it matters: Shares sank 5% on Aug. 8 as the market reacted to CFO Bruno Guilmette's departure. Stéphane Milot, vice president of investor relations and financial planning and analysis, will assume the interim CFO role starting Sept. 13. Boralex has built a reputation as a disciplined developer of renewable projects under Guilmette, but we believe it is well positioned to continue advancing against its long-term growth targets. Results were plagued by weaker-than-expected wind generation in France, but also lower pricing as above-market contracts signed a few years ago began to expire, resetting at lower rates. The bottom line: We are lowering our fair value estimate for no-moat Boralex to CAD 35 from CAD 36 due to weaker France pricing. We view shares as undervalued. Between the lines: Boralex's financial position puts it in a solid position to continue its organic development plan. The company recently concluded a sales process for its Canadian hydro assets, but failed to reach an agreement with a buyer and is now considering other capital recycling alternatives. During the quarter, Boralex was awarded two contracts with New York State for solar projects totaling 450 megawatts.

Boralex: Investor Day Targets Doubling Installed Capacity by 2030 Brett Castelli,Senior Equity Analyst,18 Jun 2025

Boralex unveiled 2030 business and financial targets at its June 17 investor day. The firm plans to double installed capacity to approximately 7 gigawatts and increase EBITDA and discretionary cash flow per share at an 8%-10% compound annual growth rate.Why it matters: We view the 8%-10% CAGR for key financial metrics as achievable and broadly in line with our expectations. We think the financing plan is reasonable, as it expects the majority of required equity investment from excess cash flow (CAD 1.3 billion) and capital recycling (CAD 900 million). Equity issuance is expected to be a modest CAD 500 million. The growth plan unveiled relies primarily on organic growth across Boralex's four key markets: Canada, France, the US, and the UK.The bottom line: We are maintaining our CAD 36 fair value estimate after making only minor adjustments to our financial model. We consider the shares to be slightly undervalued, trading approximately 8% below our fair value estimate.

Boralex Earnings: Weak Wind Conditions Weigh on Results; Maintaining CAD 36 Fair Value Estimate Brett Castelli,Senior Equity Analyst,14 May 2025

Boralex reported first-quarter EBITDA of CAD 199 million, down 9% year over year. The decline was due to weaker-than-expected wind generation in France, which was more than 20% below anticipated levels. This was partially offset by stronger-than-expected results at the Canadian wind assets.Why it matters: First-quarter results continued a string of weaker-than-expected generation from Boralex's French wind portfolio. However, we still expect generation fluctuations to balance out over the long term and don't place much emphasis on near-term variances. The firm's growth path consists of nearly 900 megawatts primarily in North America wind and battery storage projects. During the first quarter, Boralex commissioned a 104-megawatt wind farm in the UK. Construction activities have generally

continued on plan and within budget with the exception of the Apuiat wind project in Quebec, which faced delays following a harsh winter.The bottom line: We are maintaining our CAD 36 fair value estimate for no-moat Boralex after making minor adjustments to our forecast. The shares currently trade in 4-star territory, approximately 15% below our fair value estimate. We believe our undervalued view is supported by take-private transactions in the publicly traded renewable industry in recent months, including Boralex's peer Innergex in February.Coming up: Boralex plans to host an investor day and provide its 2025-30 strategic plan on June 17. We do not expect significant strategic shifts but believe there could be a greater emphasis on capital recycling as a way to finance growth and highlight asset value. Boralex appears likely to fall short of its 2025 long-term targets for megawatts of capacity and EBITDA, partially due to fewer acquisitions than originally planned.

Boralex Inc Class A BLX ★★★ 17 Apr 2026 22:34, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
36.64 CAD 17 Apr 2026	37.00 CAD 25 Mar 2026 23:45, UTC	0.99	3.78 CAD Bil 20 Apr 2026	None	Small Growth	Medium	Standard	14 Apr 2026 05:00, UTC

ESG Risk Rating Breakdown

- Exposure represents a company's vulnerability to ESG risks driven by their business model
- Exposure is assessed at the Subindustry level and then specified at the company level
- Scoring ranges from 0-55+ with categories of low, medium, and high-risk exposure

- Management measures a company's ability to manage ESG risks through its commitments and actions
- Management assesses a company's efficiency on ESG programs, practices, and policies
- Management score ranges from 0-100% showing how much manageable risk a company is managing

ESG Risk Rating

ESG Risk Ratings measure the degree to which a company's value is impacted by environmental, social, and governance risks, by evaluating the company's ability to manage the ESG risks it faces.

1. A company's Exposure to material ESG issues 2. Unmanageable Risk refers to risks that are inherent to a particular business model that cannot be managed by programs or initiatives 3. Managed Risk = Manageable Risk multiplied by a Management score of 54.5% 4. Management Gap assesses risks that are not managed, but are considered manageable 5. ESG Risk Rating Assessment = Overall Unmanaged Risk = Management Gap plus Unmanageable Risk

ESG Risk Rating Assessment[5]

ESG Risk Rating is of Apr 14, 2026. Highest Controversy Level is as of Apr 08, 2026. Sustainalytics Subindustry: Renewable Power Production. Sustainalytics provides Morningstar with company ESG ratings and metrics on a monthly basis and as such, the ratings in Morningstar may not necessarily reflect current Sustainalytics' scores for the company. For the most up to date rating and more information, please visit: sustainalytics.com/esg-ratings/.

Peer Analysis 14 Apr 2026

Peers are selected from the company's Sustainalytics-defined Subindustry and are displayed based on the closest market cap values

MORNINGSTAR®

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, indepth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss shortterm market-price movements), but we believe these negatives are mitigated by deep analysis and our longterm approach.

Morningstar's equity research group ("we," "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our singlepoint star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

When considering a company's moat, we also assess whether there is a substantial threat of value destruction, stemming from risks related to ESG, industry disruption, financial health, or other idiosyncratic issues. In this context, a risk is considered potentially value destructive if its occurrence would eliminate a firm's economic profit on a cumulative or midcycle basis. If we deem the probability of occurrence sufficiently high, we would not characterize the company as possessing an economic moat.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in workingcapital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

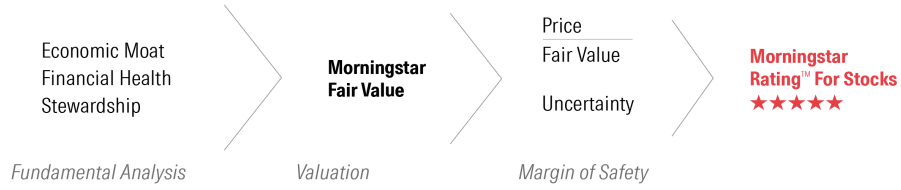

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total present value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty Around That Fair Value Estimate

Morningstar's Uncertainty Rating is designed to capture the range of potential outcomes for a company's intrinsic value. This rating is used to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating is aimed at identifying the confidence we should have in assigning a fair value estimate for a given stock.

Our Uncertainty Rating is meant to take into account anything that can increase the potential dispersion of future

MORNINGSTAR®

Research Methodology for Valuing Companies

outcomes for the intrinsic value of a company, and anything that can affect our ability to accurately predict these outcomes. The rating begins with a suggested rating produced by a quantitative process based on the trailing 12-month standard deviation of daily stock returns. An analyst overlay is then applied, with analysts using the suggested rating, historical rating data, and their own knowledge of the company to inform them as they make the final Uncertainty Rating decision. Ultimately, the rating decision rests with the analyst. Analysts take into account many characteristics when making their final decision, including cyclical factors, operational and financial factors such as leverage, company-specific events, ESG risks, and anything else that might increase the potential dispersion of future outcomes and our ability to estimate those outcomes.

Our recommended margin of safety—the discount to fair value demanded before we'd recommend buying or selling the stock—widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the potential dispersion of outcomes, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the Uncertainty Rating provides guidance in portfolio construction based on risk tolerance.

Our Uncertainty Ratings are: Low, Medium, High, Very High, and Extreme.

	Margin of Safety	
Qualitative Analysis Uncertainty Ratings	★★★★★Rating	★Rating
Low	20% Discount	25% Premium
Medium	30% Discount	35% Premium
High	40% Discount	55% Premium
Very High	50% Discount	75% Premium
Extreme	75% Discount	300% Premium

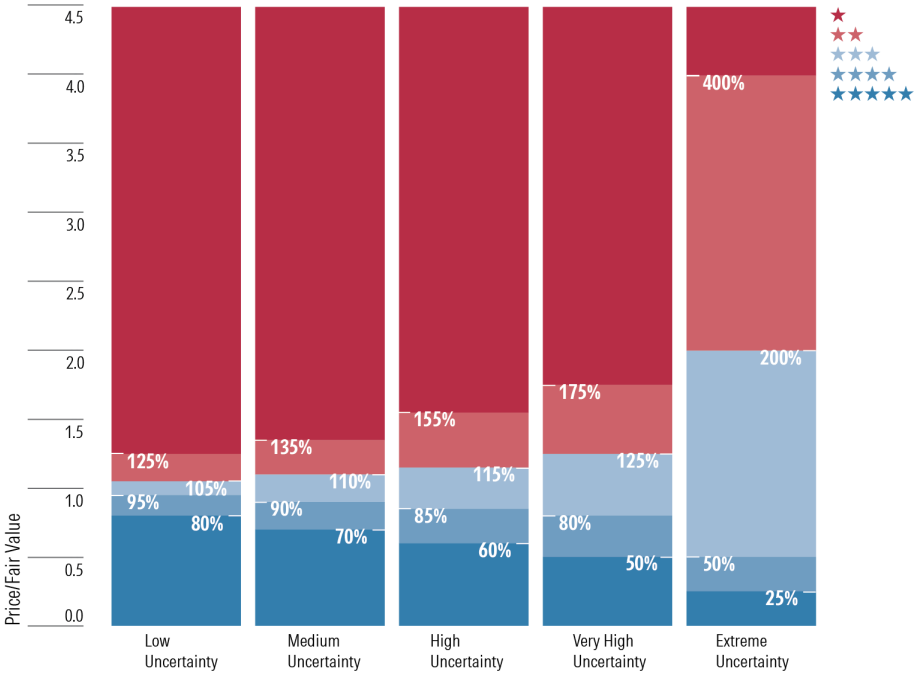

Our uncertainty rating is based on the interquartile range, or the middle 50% of potential outcomes, covering the 25th percentile–75th percentile. This means that when a stock hits 5 stars, we expect there is a 75% chance that the intrinsic value of that stock lies above the current market price. Similarly, when a stock hits 1 star, we expect there is a 75% chance that the intrinsic value of that stock lies below the current market price.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more details about our methodology, please go to https://shareholders.morningstar.com

Morningstar Equity Research Star Rating Methodology

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

★★★★★ We believe appreciation beyond a fair risk adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

★★★★ We believe appreciation beyond a fair risk-adjusted return is likely.

★★★ Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

★★ We believe investors are likely to receive a less than fair risk-adjusted return.

★ Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments,

MORNINGSTAR®

Research Methodology for Valuing Companies

and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments, and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Sustainalytics ESG Risk Rating Assessment: The ESG Risk Rating Assessment is provided by Sustainalytics; a Morningstar company.

Sustainalytics' ESG Risk Ratings measure the degree to which company's economic value at risk is driven by environment, social and governance (ESG) factors.

Sustainalytics analyzes over 1,300 data points to assess a company's exposure to and management of ESG risks. In other words, ESG Risk Ratings measures a company's unmanaged ESG Risks represented as a quantitative score. Unmanaged Risk is measured on an open-ended scale starting at zero (no risk) with lower scores representing less unmanaged risk and, for 95% of cases, the unmanaged ESG Risk score is below 50.

Based on their quantitative scores, companies are grouped into one of five Risk Categories (negligible, low, medium, high, severe). These risk categories are absolute, meaning that a 'high risk' assessment reflects a comparable degree of unmanaged ESG risk across all subindustries covered.

The ESG Risk Rating Assessment is a visual representation of Sustainalytics ESG Risk Categories on a 1 to 5 scale. Companies with Negligible Risk = 5 Globes, Low Risk = 4, Medium Risk = 3 Globes, High Risk = 2 Globes, Severe Risk = 1 Globe. For more information, please visit sustainalytics.com/esg-ratings/

Ratings should not be used as the sole basis in evaluating a company or security. Ratings involve unknown risks and uncertainties which may cause our expectations not to occur or to differ significantly from what was expected and should not be considered an offer or solicitation to buy or sell a security.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of the report is Morningstar Research Services LLC, a U.S.A. domiciled financial institution.

by local and/or regional regulatory bodies, including laws in connection with the distribution third-party research reports.

Conflicts of Interest

- No interests are held by the analyst with respect to the security subject of this investment research report.
- Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com
- Analysts' compensation is derived from Morningstar, Inc.'s overall earnings and consists of salary, bonus and in some cases restricted stock.
- Neither Morningstar, Inc. or the Equity Research Group receives commissions for providing research nor do they charge companies to be rated.
- Morningstar's overall earnings are generated in part by the activities of the Investment Management and Research groups, and other affiliates, who provide services to product issuers.
- Morningstar employees may not pursue business and employment opportunities outside Morningstar within the investment industry (including but not limited to, working as a financial planner, an investment professional or investment professional representative, a broker-dealer or broker-dealer agent, a financial writer, reporter, or analyst) without the approval of Morningstar's Legal and if applicable, Compliance teams.
- Neither Morningstar, Inc. or the Equity Research Group is a market maker or a liquidity provider of the security noted within this report.
- Neither Morningstar, Inc. or the Equity Research Group has been a lead manager or co-lead manager over the previous 12-months of any publicly disclosed offer of financial instruments of the issuer.
- Morningstar, Inc.'s investment management group does have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them.
- Morningstar, Inc. is a publicly traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section https://shareholders.morningstar.com/investor-relations/financials/sec-filings/default.aspx
- Morningstar, Inc. may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar, Inc.'s conflict of interest policies is available from http://global.morningstar.com/equitydisclosures. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

Risk Warning Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security's investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions.
