Alnylam Earnings: Amvuttra Uptake Drives Sales; Durability of Demand in Focus Amid Competition

Analyst Note Rachel Elfman, Equity Analyst, 1 May 2026

Alnylam posted first-quarter net product revenue above $1 billion, driven by $890 million in Amvuttra sales across ATTR-CM and ATTR-PN. Management reaffirmed 2026 guidance of $5.1 billion at the midpoint in total net product revenue, implying 71% growth versus 2025.

Why it matters: To achieve management's full-year net product revenue outlook, including $4.4 billion-$4.7 billion in TTR franchise sales from Amvuttra and Onpattro, Alnylam must deliver materially higher growth each quarter.

- The durability of Amvuttra's demand will be key. While strong patient uptake and international expansion following last year's ATTR-CM label expansion support the outlook, rising competition from BridgeBio, Pfizer, and pipeline candidates from Ionis and Intellia will likely pressure market share and pricing.
- We believe Alnylam's TTR product revenue target is achievable with strong execution and robust global uptake, but sales growth will be partially offset by a mid-single-digit decline in US net price driven by higher gross-to-net deductions.

The bottom line: We maintain our fair value estimate of $310 per share for narrow-moat Alnylam, and the stock is currently trading in 3-star territory. Despite viewing shares as fairly valued, we maintain a positive outlook and forecast a five-year compound annual growth rate exceeding 25%, even with

Business Description

Alnylam Pharmaceuticals is a leader in the study of RNA interference (RNAi) therapeutics. RNAi is a naturally occurring biological pathway within cells for sequence-specific silencing and regulation of gene expression. Alnylam's commercial RNAi therapeutic products include Onpattro and Amvuttra (for hATTR amyloidosis), Givlaari (for acute hepatic porphyria), and Oxlumo (for primary hyperoxaluria type 1), all developed and commercialized by Alnylam. Plus, Leqvio (for hypercholesterolemia) and Qfitlia (for hemophilia A or B), which are being commercialized by Alnylam's partners, Novartis and Sanofi, respectively. It also has several clinical programs across various therapeutic areas, including cardio-metabolic diseases, neuroscience, and hematology.

market share and pricing pressure factored into our Amvuttra assumptions.

- We assign a 65% probability of approval to Alnylam's next-generation TTR silencer, C, now in phase 3 trials evaluating biannual dosing and potential efficacy advantages over Amvuttra. We expect nucresiran launches in 2028 for ATTR-PN and 2030 for ATTR-CM, with uptake from both new patients and switches from Amvuttra, extending the durability of Alnylam's TTR franchise and supporting long-term growth for the firm.

Business Strategy & Outlook Rachel Elfman, Equity Analyst, 24 Mar 2026

Alnylam Pharmaceuticals is a pioneer in designing therapeutics based on RNA interference, or RNAi, a mechanism that occurs naturally in cells and silences overexpressed genes, which often cause protein misfolding and/or protein accumulation. Alnylam seeks to capitalize on the therapeutic potential of RNAi by creating small interfering RNA, or siRNA, that can treat diseases at the genetic level. When siRNA reaches its intended target, it can silence the gene that it contains code for, making it a potentially game-changing technology for difficult- to-treat diseases caused by genetic mutations.

After over a decade of research, Onpattro, the first RNAi therapy, was approved in 2018 for polyneuropathy in hereditary ATTR amyloidosis. This positioned Alnylam as a leader among RNA-based biotech companies. Alnylam is one of only a few biotechnology companies with a systematic methodology for identifying targets and developing drug candidates. In addition to Onpattro's 2018 approval, Alnylam received approval in 2019 for Givlaari for acute hepatic porphyria, or AHP. In 2020, Oxlumo was approved for the treatment of primary hyperoxaluria type 1 in all age groups. In June 2022, Alnylam received FDA approval for Amvuttra for the treatment of ATTR amyloidosis with polyneuropathy. In December 2021, Leqvio received approval for high cholesterol, which was developed with Alnylam's partner Novartis. In March 2025, the FDA approved Amvuttra in ATTR-CM and Qfitlia for hemophilia A or B.

Alnylam competes with a few biotech firms that focus on RNA-based therapies, including Ionis, which received approval of Tegsedi for polyneuropathy in hATTR amyloidosis in 2018, about two months after Alnylam. Onpattro's safety profile is much more attractive, since Tegsedi carries a black-box warning due to severe safety risks, but we expect both companies to produce next-generation candidates that could be more competitive.

Strong patient uptake and international expansion have supported Alnylam's sales growth, but rising ATTR-CM competition from BridgeBio's Attruby and Pfizer's Vyndaqel and Vyndamax will likely pressure Amvuttra's market share and pricing later in our 10-year forecast period.

Bulls Say Rachel Elfman, Equity Analyst, 24 Mar 2026

- Alnylam's Nobel-prize-winning technology and massive intellectual property in RNA interference

helped the firm create an entirely new class of therapeutics for difficult to treat diseases.

- Alnylam's full pipeline offers several opportunities to bolster the company's competitive position, and it indicates a reproducible research strategy.
- Onpattro is the first approved RNA interference therapy. In addition to first-mover advantage, Alnylam has expanded its reach in ATTR amyloidosis with next-generation Amvuttra, which is administered less frequently.

Bears Say Rachel Elfman, Equity Analyst, 24 Mar 2026

- Alnylam's valuation rests on its ability to maintain six-figure pricing and payers' willingness to continue reimbursement, which could be affected by shifts in healthcare drug policy.
- While Alnylam is targeting several rare genetic disorders—including amyloidosis, AHP, and complement-mediated diseases—entrenched competitors are also progressing next-generation treatments.

▶ As is the case with most orphan diseases, if Alnylam cannot successfully raise awareness of these underdiagnosed diseases and improve diagnosis rates, its commercial success will be limited.

Economic Moat Rachel Elfman, Equity Analyst, 24 Mar 2026

We assign Alnylam a Morningstar Economic Moat Rating of narrow, based on the intangible assets of its RNA interference, RNAi, technology and its lengthy patents. Alnylam's proprietary technology specializes in RNAi, which uses small interfering RNA to silence malfunctioning genes. Its technology has led to a new class of therapies, which are prime for targeting rare diseases and other disorders caused by genetic mutations. Alnylam's RNAi technology platform has produced four marketed products since 2018, along with a growing and diverse pipeline, which supports the company's intangible assets and narrow economic moat. In addition, Alnylam has lengthy patents for its drugs extending well into 2035. Alnylam reached returns above its cost of capital in 2025, and we model-adjusted ROICs averaging 33% during our 10-year forecast period, versus a 9% WACC.

Onpattro (patisiran) was approved in 2018 for polyneuropathy in hereditary ATTR amyloidosis, a rare, progressive disease characterized by the abnormal buildup of amyloid deposits in the body's organs and tissues. Alnylam has a dominant position within the hATTR amyloidosis market, and it has been able to build upon its RNAi expertise to create a highly effective drug. One of Alnylam's primary competitors, Ionis Pharmaceuticals, competes in this space with its own RNA-based technology platform. Ionis' drug, Tegsedi (inotersen), was approved in late 2018 for polyneuropathy, about two months after the approval of Alnylam's Onpattro in the same indication. However, Tegsedi's efficacy comes with several severe side effects, and the label includes a black-box warning for thrombocytopenia and glomerulonephritis, which can be life-threatening and may result in dialysis-dependent renal failure. As a result, Ionis' Tegsedi requires testing prior to treatment and frequent monitoring during treatment. Tegsedi is administered subcutaneously once weekly, but the black-box warning requires frequent blood and urine monitoring. In comparison, Alnylam's Onpattro is administered every three weeks by intravenous infusion. The poor safety profile of Ionis' Tegsedi has not made it competitive in polyneuropathy when matched with Onpattro's much better safety profile and strong commercial success. We believe this illustrates the competitive edge of Alnylam's RNAi platform over Ionis' Tegsedi. However, Ionis is testing next-generation versions of Tegsedi that could improve upon this profile.

Another competitor in ATTR amyloidosis is Pfizer's Vyndaqel/Vyndamax (tafamidis), a small molecule that stabilizes the misfolded protein that causes the disease. Vyndaqel is currently approved in amyloidosis with cardiomyopathy, while Alnylam's Onpattro and Ionis' Tegsedi are approved in polyneuropathy. BridgeBio's Attruby is a small-molecule transthyretin stabilizer for the treatment of ATTR-CM.

The FDA approved Alnylam's Amvuttra in 2022 for ATTR amyloidosis with polyneuropathy, and in March

MORNINGSTAR®

Alnylam Pharmaceuticals Inc ALNY ★★★ 1 May 2026 02:44, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
309.49 USD 30 Apr 2026	310.00 USD 31 Oct 2025 16:56, UTC	1.00	40.29 USD Bil 1 May 2026	Narrow	Mid Growth	High	Standard	1 May 2026 05:00, UTC

2025, the FDA approved Amvuttra as the first RNAi therapeutic for adults with ATTR-CM. ATTR-CM is estimated to affect more than 250,000 people globally, but many are underdiagnosed, while ATTR-PN is a much rarer disease affecting about 10,000-40,000 people globally. Many ATTR amyloidosis patients may have both cardiomyopathy and polyneuropathy, and both are commonly misdiagnosed or underdiagnosed. Amvuttra is a quarterly subcutaneous injection as opposed to Onpattro's intravenous injection every three weeks, which makes dosing less burdensome for patients.

Regeneron and Intellia Therapeutics are co-developing an ATTR drug using CRISPR-Cas9 gene editing components and presented data in June 2021 on their phase 1 study. An impressive 87% mean reduction in TTR at a high dose was reported; however, the data is very limited as this study only included six patients for just 28 days of assessment. However, key questions remain around the safety and long-term impact of gene editing. A substantial amount of data involving hundreds of patients over extended periods of time will be needed to demonstrate the safety of gene editing for ATTR amyloidosis. Alnylam already has a dominant position within the ATTR amyloidosis market, and we anticipate it will continue to have several years of further expansion into the market with the recent approval of Amvuttra.

Givlaari (givosiran) received FDA approval in November 2019 for the treatment of adults with acute hepatic porphyria, or AHP. AHP is a family of rare, genetic diseases associated with distinct enzyme defects in the heme biosynthesis pathway in the liver. Givlaari has also received approval in the EU and in several other countries, including Brazil, Canada, and Japan. AHP is a rare indication with a high unmet need, which allows for strong pricing power. At launch, Givlaari's average net cost per patient was over $440,000. AHP is characterized by attacks of pain and paralysis, and the symptoms can often lead to misdiagnoses of other, more common conditions, such as viral gastroenteritis, irritable bowel syndrome, and appendicitis. Alnylam has a US gastrointestinal diseases education and promotional agreement to help raise awareness about AHP. Likewise, the company has also engaged with patient groups and communities. We expect diagnosis rates to improve with time, providing a tailwind for Givlaari's market penetration.

In November 2020, Alnylam received approval for Oxlumo (lumasiran) in the US and EU for the treatment of primary hyperoxaluria type 1. Primary hyperoxaluria, or PH, is a group of rare genetic metabolic disorders that are characterized by the accumulation of oxalate in the kidneys and other organ systems of the body, which can result in kidney and liver failure. Alnylam has been expanding its global commercialization of Oxlumo with a launch underway in Germany, temporary authorization for use allowed in France, and marketing authorization approval in Brazil. Alnylam has pending regulatory filings for Oxlumo in other countries as well.

Alnylam also has partnered programs in which it receives royalties or a share of profits if the drug candidate is approved. Leqvio (inclisiran), developed in partnership with Novartis and Blackstone,

MORNINGSTAR®

Alnylam Pharmaceuticals Inc ALNY ★★★ 1 May 2026 02:44, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
309.49 USD 30 Apr 2026	310.00 USD 31 Oct 2025 16:56, UTC	1.00	40.29 USD Bil 1 May 2026	Narrow	Mid Growth	High	Standard	1 May 2026 05:00, UTC

targets hypercholesterolemia, or high cholesterol, via twice-yearly subcutaneous injections. Leqvio received EU approval in December 2020, and it received FDA approval in December 2021. It is estimated that 40% of adults worldwide have high LDL cholesterol, and 80% of high-risk patients do not achieve recommended LDL targets despite the use of statins. In its clinical development program, Leqvio provided an effective and maintained LDL cholesterol reduction of up to 52% in patients with elevated LDL, despite maximally tolerated statin therapy. We believe Leqvio's efficacy looks competitive against statins, Amgen's Repatha, and Regeneron and Sanofi's Praluent. Repatha and Praluent use PCSK9 inhibitors, and while Leqvio also targets PCSK9 through RNAi, it offers the convenience of only a twice-a-year subcutaneous dose. In comparison, the recommended dosing for Repatha and Praluent is every two weeks or monthly subcutaneously. Alnylam is eligible to receive royalties up to 20% on Leqvio's sales. Alnylam benefits from partnered programs like Leqvio because larger companies take on the development, manufacturing, and commercialization costs. In return, Alnylam earns tiered royalties on global sales while freeing resources to focus on its broader RNAi pipeline.

Fair Value and Profit Drivers Rachel Elfman, Equity Analyst, 24 Mar 2026

We maintain narrow-moat Alnylam's fair value estimate of $310 per share.

Our valuation rests on the approval and commercial success of Alnylam's RNAi therapies. We forecast Alnylam's next-generation Amvuttra will help expand the company's revenue thanks to its subcutaneous injections administered once every three months for patients with ATTR amyloidosis with polyneuropathy, compared with Onpattro's intravenous infusion once every three weeks.

We anticipate Alnylam could become an industry-leading ATTR franchise thanks to its approved products, Onpattro and Amvuttra for ATTR with polyneuropathy. We forecast Amvuttra could reach about $8.5 billion in sales by 2035 (accounting for both approved indications in ATTR-CM and ATTR-PN).

Givlaari for AHP and Oxlumo for primary hyperoxaluria will also help drive returns, given that Alnylam has full global rights for both assets. We anticipate Givlaari could reach peak sales of over $850 million while Oxlumo's sales could reach about $365 million. We continue to expect that strong geographic expansion efforts will be a key driver for Onpattro, Givlaari, Oxlumo, and Amvuttra, which should lead to substantial growth for the firm.

Leqvio for high cholesterol is partnered with Novartis and Blackstone. Leqvio received approval in the EU in December 2020 and FDA approval in December 2021. By 2035, we forecast over $800 million in royalties from Leqvio.

Alnylam reported positive phase 3 results for cemdisiran (generalized myasthenia gravis) and a US filing is planned for 2026. We assign this candidate an 85% probability of approval, and and we anticipate it could reach the market in 2027. We assign zilebesiran (hypertension) a 75% probability of

Alnylam Pharmaceuticals Inc ALNY ★★★ 1 May 2026 02:44, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
309.49 USD 30 Apr 2026	310.00 USD 31 Oct 2025 16:56, UTC	1.00	40.29 USD Bil 1 May 2026	Narrow	Mid Growth	High	Standard	1 May 2026 05:00, UTC

approval, and we anticipate it could launch as early as 2028. We forecast robust, double-digit total company revenue growth in the near term.

Alnylam reached profitability in 2025 for the first time since its founding in 2002, recording nearly $314 million in net income and diluted EPS of $2.33 in 2025. We expect collaboration partnerships and cash flows from Alnylam's TTR franchise will help mitigate the hefty operating expenses required to advance candidates through clinical developmen. We assume a 9% cost of equity for Alnylam, which is consistent with the other emerging biotech companies under our coverage.

Risk and Uncertainty Rachel Elfman, Equity Analyst, 24 Mar 2026

We assign Alnylam a High Uncertainty Rating. Its proprietary RNAi platform has yielded several drugs across a range of rare indications, but the success of the novel therapy class in more prevalent diseases remains relatively unproven. Alnylam continues to update its RNAi technology platform, rolling out improvements in efficacy and safety, yet its pipeline remains vulnerable to clinical trial missteps or safety issues.

In addition to clinical development risks, we see some risks to Alnylam's commercialization strategy. The firm is targeting several rare, underdiagnosed diseases such as cardiomyopathy in ATTR amyloidosis and acute hepatic porphyria. As is the case with most orphan diseases, if Alnylam cannot successfully raise awareness of these diseases and improve diagnosis rates, its commercial success will be limited.

Additionally, other companies are pursuing RNA-based therapies, which could encroach on Alnylam's territory and target similar disease indications. Product governance is the primary ESG risk, as failure to comply with extensive regulations and quality management standards can lead to expensive recalls, increased regulatory scrutiny, compliance costs, and lawsuits from affected customers. Alnylam's valuation rests on its ability to maintain six-figure pricing and on payers' willingness to continue reimbursement, both of which could be affected by shifts in healthcare drug policy.

Capital Allocation Rachel Elfman, Equity Analyst, 24 Mar 2026

We assign Alnylam a Standard Capital Allocation Rating. Our analysis evaluates what we determine to be the three key facets of management decision-making from the perspective of shareholders: balance sheet strength, investment efficacy, and distributions. Our Standard rating results from a sound balance sheet, fair investment strategy, and an assessment of shareholder distributions as appropriate.

Alnylam's balance sheet is sound, with revenue cyclicality and operating leverage each possessing a medium rating. The company is in decent financial health, thanks to its low debt levels and sizable cash on its balance sheet. As of year-end 2025, Alnylam held $2.91 billion in cash, cash equivalents, and marketable securities.

Alnylam Pharmaceuticals Inc ALNY ★★★ 1 May 2026 02:44, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
309.49 USD 30 Apr 2026	310.00 USD 31 Oct 2025 16:56, UTC	1.00	40.29 USD Bil 1 May 2026	Narrow	Mid Growth	High	Standard	1 May 2026 05:00, UTC

We view Alnylam's investment decisions as fair, with economic profit increasing throughout our explicit forecast period. Alnylam has continued to invest and improve upon its RNAi technology in order to bring innovative drugs to the market and expand its patient reach. We like management's focus on diversifying the company's pipeline to help ensure growth.

Finally, we assess overall shareholder distributions as appropriate. Alnylam does not currently pay a dividend, and we view this as appropriate since the firm is growing quickly and reinvesting in its pipeline and commercialization efforts to help support its narrow moat.

Alnylam's founding CEO, Dr. John Maraganore, retired at the end of 2021 and transitioned CEO leadership to Alnylam's then-president and COO, Dr. Yvonne Greenstreet. Maraganore had been with Alnylam since its founding in 2002 and supported the leadership transition in a consulting capacity through the first quarter of 2022. Greenstreet joined Alnylam in 2016 as COO and was promoted to president and COO in 2020. Greenstreet has more than 25 years of experience in the biopharmaceutical industry and building businesses globally, including in the US and Europe. Given her deep industry experience, we believe she is well qualified to lead Alnylam as CEO.

The rest of the leadership team has served at several large biotech and pharmaceutical firms. We like the shareholder-friendly choice to separate the roles of CEO and chairman, with independent director Amy W. Schulman replacing Michael Bonney, who stepped down as chair in January 2023. Schulman was elected to the Alnylam board of directors in 2014 and has extensive experience in the healthcare industry. The board is composed of industry leaders in both biopharma and health insurance, including former FDA Commissioner Margaret Hamburg.

Analyst Notes Archive

Alnylam Earnings: Robust Sales of Amvuttra for ATTR-CM Drive Growth; Pipeline Makes Progress

Rachel Elfman,Equity Analyst,31 Oct 2025

Alnylam Pharmaceuticals generated third-quarter net product revenue of $851 million, a 103% increase compared with the prior-year period. Management raised 2025 revenue guidance for its TTR franchise by 12% at the midpoint. However, Alnylam's stock dropped almost 7% on Oct 30. Why it matters: Alnylam's sales were driven by its ATTR amyloidosis franchise, with Amvuttra contributing 80% of total net product revenue. ATTR cardiomyopathy patient demand for Amvuttra doubled sequentially, reflecting continued growth momentum. Alnylam's share price is up over 90% this year after two guidance hikes, and robust Amvuttra sales keep raising the bar. The stock dip can be attributed to even loftier investor expectations and a subpoena related to US government price reporting, though no wrongdoing was alleged. Following positive phase 3 results for cemdisiran (generalized myasthenia gravis) and a US filing planned for early 2026, we increased our probability of approval for this candidate to 85% from 60% and anticipate it could reach the market in 2027.The bottom line: We raised

Alnylam Pharmaceuticals Inc ALNY ★★★ 1 May 2026 02:44, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
309.49 USD 30 Apr 2026	310.00 USD 31 Oct 2025 16:56, UTC	1.00	40.29 USD Bil 1 May 2026	Narrow	Mid Growth	High	Standard	1 May 2026 05:00, UTC

narrow-moat Alnylam's fair value estimate by 17% to $310 per share from $265, reflecting stronger Amvuttra sales and higher approval odds for two pipeline candidates. Despite this increase, we think shares are trading at a significant premium in 1-star territory. We also increased zilebesiran's (hypertension) probability of approval to 75% from 50% following a phase 3 trial initiation, and we anticipate it could launch in 2028. We forecast robust total company revenue growth in the near term, resulting in a five-year compound annual growth rate of 29%. Strong patient uptake and international expansion have supported Alnylam's results, but rising ATTR-CM competition from BridgeBio's Attruby and Pfizer's Vyndaqel and Vyndamax, plus other pipeline candidates from Ionis and Intellia, could pressure market share and pricing power longer-term.

Alnylam Earnings: Strong Launch of Amvuttra for ATTR-CM Boosts 2025 Outlook Rachel Elfman,Equity Analyst,1 Aug 2025

Alnylam generated second-quarter net product revenue of $672 million, a 64% increase compared with the prior-year period. Management raised its guidance for its TTR franchise by 34% at the midpoint, and investors sent the stock up 15% on July 31. Why it matters: Alnylam's growth was largely driven by its ATTR amyloidosis franchise, which accounted for 81% of total net product revenue in the quarter. We now forecast about $2.25 billion in revenue from Alnylam's ATTR franchise in 2025. Amvuttra for ATTR-CM received FDA approval at the end of March, and Anlyam's strong commercial launch has received positive reception from patients, providers, and payers. We expected robust total revenue growth in the near term, resulting in a five-year compound annual growth rate exceeding 29%. Alnylam remains in a healthy financial position, with cash and marketable securities totaling $2.86 billion at quarter-end, which should provide the firm with the resources to further expand its portfolio and support commercialization efforts. The bottom line: We have raised our fair value estimate to $265 per share from $245 to account for stronger-than-expected sales for its recently approved indication in ATTR-cardiomyopathy. Despite our increased near-term outlook, we think shares appear significantly overvalued. Alnylam's results have been supported by strong patient uptake and expansion into international markets, but we are cautious of the increasingly competitive market for ATTR-CM and how it will put pressure on Alnylam's market share potential in the longer term. Alnylam's narrow moat rating is based on strong intangible assets from its proprietary RNAi technology and lengthy patents extending to 2035. Big picture: The ATTR-CM market has grown more competitive following the FDA approval of BridgeBio's Attruby in November 2024. There is also competition from Pfizer's Vyndaqel and Vyndamax, and other ATTR-CM pipeline candidates from Ionis and Intellia could follow.

Alnylam Earnings: Launch of Amvuttra for ATTR-CM Underway; Fair Value Up to $245 From $223 Rachel Elfman,Equity Analyst,2 May 2025

Narrow-moat Alnylam reported solid first-quarter results with net product revenue growing 28% year over year to $469 million, thanks to robust demand for its ATTR amyloidosis franchise, which grew 45%

Alnylam Pharmaceuticals Inc ALNY ★★★ 1 May 2026 02:44, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
309.49 USD 30 Apr 2026	310.00 USD 31 Oct 2025 16:56, UTC	1.00	40.29 USD Bil 1 May 2026	Narrow	Mid Growth	High	Standard	1 May 2026 05:00, UTC

from the prior year period. We forecast Alnylam will achieve net product revenue of $2.17 billion in 2025, representing 32% growth.We have raised our fair value estimate to $245 per share from $223 to account for stronger sales from Alnylam's ATTR franchise, along with tailwinds thanks to the recent US Food and Drug Administration's approvals of Amvuttra (in ATTR-CM) and Qfitlia (for hemophilia A or B). Qfitlia is under license with wide-moat Sanofi, and Alnylam is eligible to receive tiered royalties of 15% to 30% on global net sales.Management reiterated it 2025 guidance, and we forecast robust revenue growth in the near term, resulting in a five-year compound annual growth rate exceeding 25%. Alnylam's results have been supported by strong patient uptake, expansion into international markets, and a developing pipeline.Amvuttra for ATTR-CM received FDA approval at the end of March, and management stated there is good progress across all early commercial indicators as the launch is underway. We await this drug's first full quarter of sales to be reported in the second quarter. The ATTR-CM market has grown more competitive following the FDA approval of BridgeBio's Attruby in November 2024. There is also competition from Pfizer's Vyndaqel and Vyndamax, and other ATTR-CM pipeline candidates from Ionis and Intellia could follow. We forecast that with a strong commercial launch, Amvuttra could reach about $5.8 billion in sales by 2034 (accounting for both approved indications in ATTR-CM and ATTR-PN).Alnylam remains in a healthy financial position, with cash, cash equivalents, and marketable securities totaling $2.63 billion at quarter-end, which should provide the firm with the resources to further expand its portfolio and support commercialization efforts.

Alnylam: US Approval of Amvuttra in ATTR-CM Significantly Expands Addressable Patient Population Rachel Elfman,Equity Analyst,21 Mar 2025

Narrow-moat Alnylam Pharmaceuticals has received US Food and Drug Administration approval for Amvuttra (vutrisiran), the first RNAi therapeutic for adults with ATTR amyloidosis with cardiomyopathy, or ATTR-CM. The shares were up about 11% in March 21 trading. We have adjusted our model to account for the approval (our base case was previously a 95% probability of approval), and we maintain our $223 fair value estimate.The ATTR-CM market has grown more competitive following Food and Drug Administration approval of BridgeBio's Attruby in November 2024. There is also competition from Pfizer's Vyndaqel and Vyndamax, both of which contain the active ingredient tafamidis. Other ATTR-CM pipeline candidates from Ionis and Intellia could follow.The FDA and EU had approved Amvuttra in 2022 for ATTR amyloidosis with polyneuropathy, a much rarer disease affecting about 10,000-40,000 people globally. By comparison, ATTR-CM is estimated to affect more than 250,000 people globally, but many are underdiagnosed. This approval broadens Amvuttra's indication, making it the first and only FDA-approved treatment for both ATTR-CM and the polyneuropathy of hereditary transthyretin-mediated amyloidosis in adults. We expect that with a strong commercial launch, Amvuttra could become a blockbuster drug during our forecast period and reach about $5.2 billion in sales by 2033 (accounting for both indications).Alnylam's strong financial position, with cash, cash equivalents, and marketable securities totaling $2.69 billion at year-end 2024, should provide the firm with the resources to further

309.49 USD 30 Apr 2026	310.00 USD 31 Oct 2025 16:56, UTC	1.00	40.29 USD Bil 1 May 2026	Narrow	Mid Growth	High	Standard	1 May 2026 05:00, UTC

expand its portfolio. Our narrow moat rating is based on the strong intangible assets from the company's proprietary RNAi technology and lengthy patents extending to 2035. We continue to have a positive long-term outlook for Alnylam thanks to the continued progression of its diverse drug pipeline for many rare diseases with high unmet needs.

Alnylam Earnings: Strong Patient Uptake Drives Growth; Anticipating Approval of Amvuttra for ATTR-CM Rachel Elfman,Equity Analyst,14 Feb 2025

Narrow-moat Alnylam Pharmaceuticals reported robust 2024 results highlighted by net product revenue of $1.65 billion, representing 33% growth compared with 2023, thanks to demand for its ATTR amyloidosis franchise. Strong patient uptake of Amvuttra (for hereditary ATTR amyloidosis with polyneuropathy) accounted for 59% of the year's net product revenue. We forecast Alnylam will achieve net product revenue of $2.15 billion in 2025, representing 30% growth. We maintain our $223 fair value estimate and forecast strong performance amounting to a 25% five-year compound annual growth rate. Alnylam's results have been supported by strong patient uptake, expansion into international markets, a developing pipeline, and upcoming regulatory approvals. However, we view the shares as currently overvalued.Alnylam is approaching its highly anticipated US regulatory action date on March 23 for the expanded indication of Amvuttra (vutrisiran) for patients with transthyretin amyloid cardiomyopathy, or ATTR-CM. The ATTR-CM market has become increasingly competitive as BridgeBio received Food and Drug Administration approval in November 2024 for Attruby. There is also competition from Pfizer's Vyndaqel and Vyndamax, both of which contain the active ingredient tafamidis. Other ATTR-CM pipeline candidates from Ionis and Intellia could follow. BridgeBio's annual list price for Attruby is $244,000; we think the increasingly competitive ATTR-CM market will put pressure on how much Alnylam can charge for its drug. We assign Amvuttra a 95% probability of approval. We anticipate that with a strong commercial launch, it could become a blockbuster drug during our forecast period.The rest of Alnylam's pipeline continues to make progress. The firm reported encouraging phase 1 data for its next-generation ATTR-CM pipeline candidate, nucresiran, demonstrating more than a 95% TTR knockdown and biannual or annual dosing, compared with Amvuttra's four doses per year for ATTR-CM.

Alnylam Earnings: Demand for Amvuttra Drives Sales; Vutrisiran Regulatory Application Submitted Rachel Elfman,Equity Analyst,1 Nov 2024

Narrow-moat Alnylam reported robust third-quarter results highlighted by net product revenue of $420 million, representing 34% year-over-year growth, driven by strong demand for its ATTR amyloidosis franchise. Strong patient uptake of next-generation drug Amvuttra (for ATTR amyloidosis with polyneuropathy) is driving sales, accounting for $259 million of the quarter's net product revenue, representing 62%. We continue to forecast Alnylam will achieve total revenue of roughly $2.24 billion in 2024, representing about 23% growth. We maintain our fair value estimate of $223 per share, and although we have a positive outlook for the firm, we view shares as currently overvalued, trading in 2-

star territory about 20% above our fair value estimate.Alnylam's investigational RNAi therapeutic, vutrisiran, which treats patients with ATTR amyloidosis with cardiomyopathy (ATTR-CM), looks quite promising given its strong phase 3 data, and we assign it an 85% probability of approval in our base case. Alnylam submitted regulatory applications in the United States and European Union, and pending approvals, we anticipate it could reach the market as early as 2025. We anticipate vutrisiran could become a blockbuster drug toward the end of our 10-year forecast period if it is able to have a successful commercial launch and strong patient adoption. We anticipate vutrisiran could face competition from BridgeBio's pipeline candidate, acoramidis, which is on track to receive a regulatory decision from the US Food and Drug Administration at the end of November. Acoramidis is administered via a tablet twice daily while vutrisiran is administered subcutaneously once every three months. We see patients as potentially having a preference for the more frequent but oral administration of acoramidis.We appreciate Alnylam's strong financial position, with cash, cash equivalents, and marketable securities totaling $2.78 billion at quarter-end, compared with $2.44 billion as of Dec. 31, 2023.

ESG Risk Rating Breakdown

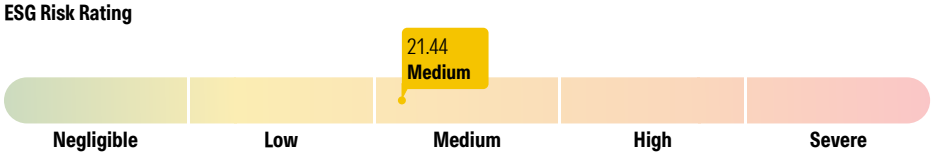

- Exposure represents a company's vulnerability to ESG risks driven by their business model
- Exposure is assessed at the Subindustry level and then specified at the company level
- Scoring ranges from 0-55+ with categories of low, medium, and high-risk exposure

- Management measures a company's ability to manage ESG risks through its commitments and actions
- Management assesses a company's efficiency on ESG programs, practices, and policies
- Management score ranges from 0-100% showing how much manageable risk a company is managing

ESG Risk Rating

ESG Risk Ratings measure the degree to which a company's value is impacted by environmental, social, and governance risks, by evaluating the company's ability to manage the ESG risks it faces.

ESG Risk Rating Assessment[5]

ESG Risk Rating is of May 01, 2026. Highest Controversy Level is as of Apr 08, 2026. Sustainalytics Subindustry: Biotechnology. Sustainalytics provides Morningstar with company ESG ratings and metrics on a monthly basis and as such, the ratings in Morningstar may not necessarily reflect current Sustainalytics' scores for the company. For the most up to date rating and more information, please visit: sustainalytics.com/esg-ratings/.

1. A company's Exposure to material ESG issues 2. Unmanageable Risk refers to risks that are inherent to a particular business model that cannot be managed by programs or initiatives 3. Managed Risk = Manageable Risk multiplied by a Management score of 45.5% 4. Management Gap assesses risks that are not managed, but are considered manageable 5. ESG Risk Rating Assessment = Overall Unmanaged Risk = Management Gap plus Unmanageable Risk

Peer Analysis 01 May 2026

Peers are selected from the company's Sustainalytics-defined Subindustry and are displayed based on the closest market cap values

MORNINGSTAR®

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, indepth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss shortterm market-price movements), but we believe these negatives are mitigated by deep analysis and our longterm approach.

Morningstar's equity research group ("we," "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our singlepoint star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

When considering a company's moat, we also assess whether there is a substantial threat of value destruction, stemming from risks related to ESG, industry disruption, financial health, or other idiosyncratic issues. In this context, a risk is considered potentially value destructive if its occurrence would eliminate a firm's economic profit on a cumulative or midcycle basis. If we deem the probability of occurrence sufficiently high, we would not characterize the company as possessing an economic moat.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in workingcapital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

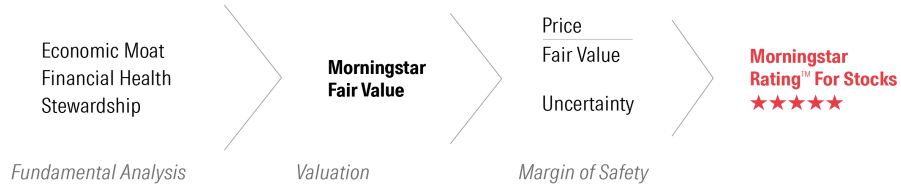

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total present value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty Around That Fair Value Estimate

Morningstar's Uncertainty Rating is designed to capture the range of potential outcomes for a company's intrinsic value. This rating is used to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating is aimed at identifying the confidence we should have in assigning a fair value estimate for a given stock.

Our Uncertainty Rating is meant to take into account anything that can increase the potential dispersion of future

MORNINGSTAR®

Research Methodology for Valuing Companies

outcomes for the intrinsic value of a company, and anything that can affect our ability to accurately predict these outcomes. The rating begins with a suggested rating produced by a quantitative process based on the trailing 12-month standard deviation of daily stock returns. An analyst overlay is then applied, with analysts using the suggested rating, historical rating data, and their own knowledge of the company to inform them as they make the final Uncertainty Rating decision. Ultimately, the rating decision rests with the analyst. Analysts take into account many characteristics when making their final decision, including cyclical factors, operational and financial factors such as leverage, company-specific events, ESG risks, and anything else that might increase the potential dispersion of future outcomes and our ability to estimate those outcomes.

Our recommended margin of safety—the discount to fair value demanded before we'd recommend buying or selling the stock—widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the potential dispersion of outcomes, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the Uncertainty Rating provides guidance in portfolio construction based on risk tolerance.

Our Uncertainty Ratings are: Low, Medium, High, Very High, and Extreme.

	Margin of Safety	
Qualitative Analysis Uncertainty Ratings	★★★★★Rating	★Rating
Low	20% Discount	25% Premium
Medium	30% Discount	35% Premium
High	40% Discount	55% Premium
Very High	50% Discount	75% Premium
Extreme	75% Discount	300% Premium

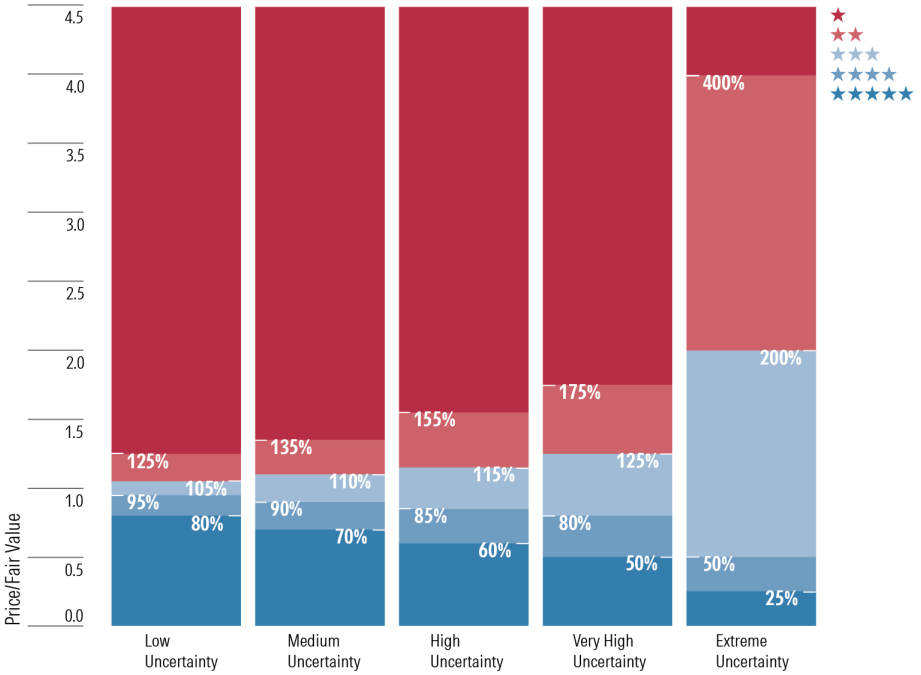

Our uncertainty rating is based on the interquartile range, or the middle 50% of potential outcomes, covering the 25th percentile–75th percentile. This means that when a stock hits 5 stars, we expect there is a 75% chance that the intrinsic value of that stock lies above the current market price. Similarly, when a stock hits 1 star, we expect there is a 75% chance that the intrinsic value of that stock lies below the current market price.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more details about our methodology, please go to https://shareholders.morningstar.com

Morningstar Equity Research Star Rating Methodology

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

★★★★★ We believe appreciation beyond a fair risk adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

★★★★ We believe appreciation beyond a fair risk-adjusted return is likely.

★★★ Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

★★ We believe investors are likely to receive a less than fair risk-adjusted return.

★ Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments,

MORNINGSTAR®

Research Methodology for Valuing Companies

and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments, and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Sustainalytics ESG Risk Rating Assessment: The ESG Risk Rating Assessment is provided by Sustainalytics; a Morningstar company.

Sustainalytics' ESG Risk Ratings measure the degree to which company's economic value at risk is driven by environment, social and governance (ESG) factors.

Sustainalytics analyzes over 1,300 data points to assess a company's exposure to and management of ESG risks. In other words, ESG Risk Ratings measures a company's unmanaged ESG Risks represented as a quantitative score. Unmanaged Risk is measured on an open-ended scale starting at zero (no risk) with lower scores representing less unmanaged risk and, for 95% of cases, the unmanaged ESG Risk score is below 50.

Based on their quantitative scores, companies are grouped into one of five Risk Categories (negligible, low, medium, high, severe). These risk categories are absolute, meaning that a 'high risk' assessment reflects a comparable degree of unmanaged ESG risk across all subindustries covered.

The ESG Risk Rating Assessment is a visual representation of Sustainalytics ESG Risk Categories on a 1 to 5 scale. Companies with Negligible Risk = 5 Globes, Low Risk = 4, Medium Risk = 3 Globes, High Risk = 2 Globes, Severe Risk = 1 Globe. For more information, please visit sustainalytics.com/esg-ratings/

Ratings should not be used as the sole basis in evaluating a company or security. Ratings involve unknown risks and uncertainties which may cause our expectations not to occur or to differ significantly from what was expected and should not be considered an offer or solicitation to buy or sell a security.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of the report is Morningstar Research Services LLC, a U.S.A. domiciled financial institution.

This Report is for informational purposes, should not be the sole piece of information used in making an investment decision, and has no regard to the specific investment objectives, financial situation or particular needs of any specific recipient. This publication is intended to provide information to assist investors in making their own investment decisions, not to provide investment advice to any specific investor. Therefore, investments discussed herein may not be suitable for all investors; investors must exercise their own independent judgment as to the suitability of such investments and recommendations in the light of their own investment objectives, experience, taxation status and financial position. Morningstar encourages Report recipients to read all relevant issue documents (e.g., prospectus) pertaining to the security concerned, including without limitation, information relevant to its investment objectives, risks, and costs before making an investment decision and when deemed necessary, to seek the advice of a financial, legal, tax, and/or accounting professional. The information, data, analyses and opinions presented herein are not warranted to be accurate, correct, complete or timely. Unless otherwise provided in a separate agreement, neither Morningstar, Inc. or the Equity Research Group represents that the report contents meet all of the presentation and/or disclosure standards applicable in the jurisdiction the recipient is located.

by local and/or regional regulatory bodies, including laws in connection with the distribution third-party research reports.

Conflicts of Interest

- No interests are held by the analyst with respect to the security subject of this investment research report.
- Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com
- Analysts' compensation is derived from Morningstar, Inc.'s overall earnings and consists of salary, bonus and in some cases restricted stock.
- Neither Morningstar, Inc. or the Equity Research Group receives commissions for providing research nor do they charge companies to be rated.
- Morningstar's overall earnings are generated in part by the activities of the Investment Management and Research groups, and other affiliates, who provide services to product issuers.
- Morningstar employees may not pursue business and employment opportunities outside Morningstar within the investment industry (including but not limited to, working as a financial planner, an investment professional or investment professional representative, a broker-dealer or broker-dealer agent, a financial writer, reporter, or analyst) without the approval of Morningstar's Legal and if applicable, Compliance teams.
- Neither Morningstar, Inc. or the Equity Research Group is a market maker or a liquidity provider of the security noted within this report.
- Neither Morningstar, Inc. or the Equity Research Group has been a lead manager or co-lead manager over the previous 12-months of any publicly disclosed offer of financial instruments of the issuer.
- Morningstar, Inc.'s investment management group does have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them.
- Morningstar, Inc. is a publicly traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section https://shareholders.morningstar.com/investor-relations/financials/sec-filings/default.aspx
- Morningstar, Inc. may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar, Inc.'s conflict of interest policies is available from http://global.morningstar.com/equitydisclosures. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

Risk Warning Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security's investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions.
