Amphenol Earnings: Asserting Its Dominance, and There's Still Time to Buy In

Analyst Note William Kerwin, CFA, Senior Equity Analyst, 29 Apr 2026

Amphenol reported phenomenal first-quarter results and second-quarter guidance, highlighted by a near-doubling of data center revenues year over year. March quarter revenue rose 58% year over year to $7.6 billion, and $8.15 billion second quarter sales guidance implies 44% year over year growth.

Why it matters: Amphenol is benefitting massively from AI infrastructure investments with its best-of-breed data center connector portfolio. We appreciate the firm's data center opportunity, but continue to see it as a well-diversified growth story, with exceptional industrial and defense growth.

- Last quarter, Amphenol sold off on soft data center guidance, which we saw as an overreaction. Quarterly AI growth can be lumpy, Amphenol guides conservatively, and we focus on the huge long-term growth opportunity. The March quarter results beat guidance by more than 10%.
- This was the first quarter with Commscope's CCS business in tow, generating meaningful inorganic growth for data center, industrial, and communications network sales. We like the fit of CCS. Still, most of the growth we saw in the quarter, and that we expect for the year, is organic.

The bottom line: We raise our fair value estimate for wide-moat Amphenol to $190, from $170, as we raise our medium-term growth estimates for data center sales off of a blowout quarter. Shares rose 5% intraday but remain undervalued, in our view. Amphenol is one of our top picks in technology hardware.

- We now expect nearly 50% sales growth in 2026, with 30% coming organically, and driven by the data

Business Description

Amphenol is a global supplier of connectors, sensors, and interconnect systems. It holds the second-largest connector market share globally and sells into the automotive, broadband, commercial air, industrial, IT and data communications, military, mobile devices, and mobile networks end markets. Amphenol is diversified geographically, with operations in 40 countries.

center (rising 80% in 2026 in our model). Still, we like continued double-digit organic growth in industrial and defense sales that keep the business diversified.

- Amphenol's best-in-class profitability expands with rising volumes. Non-GAAP operating margin rose nearly 400 basis points to 27.3% in the quarter, and we now see a path to 30% operating margin by 2030. In the short term, we expect minimal headwinds from CCS integration.

Business Strategy & Outlook William Kerwin, CFA, Senior Equity Analyst, 29 Apr 2026

We think Amphenol is a differentiated connector supplier, an excellent operator, and an exceptional steward of shareholder capital. It has numerous competitors in the fragmented electrical component industry, but its broad array of end markets allows Amphenol to expand its top line even in an individual market downturn. We think the firm's singular ability to effect cost controls gives it the highest operating margins of its peer group, allowing it to quickly bring its numerous acquisitions up to firmwide profitability.

Amphenol provides connectors with high performance and reliability that are specialized for mission-critical applications in harsh environments. As such, we think its customer relationships are very sticky, with customers facing high financial and opportunity costs from switching to another component supplier, as well as the risk of component failure. We believe customers rely on Amphenol as a design partner to supply cutting-edge products and enable new capabilities in end applications. As older products become commoditized, the firm can maintain high prices by introducing new designs for new sockets. As a result of these switching costs and pricing power, we believe Amphenol possesses a wide economic moat.

We expect Amphenol to maintain its diversified end-market structure and expand its technological and geographic breadth through mergers and acquisitions, which have funded about one-third of the firm's historical top-line growth. We expect artificial intelligence revenue to become the firm's primary growth driver over the medium term but remain less than half of sales, with excellent placement in server configurations from Nvidia and others. As Amphenol grows, we expect it will maintain its best-in-class operating margins by expanding its decentralized organizational structure. The firm operates through more than 140 general managers who operate with great autonomy to respond to end customers' needs and manage costs; we think this count will grow as the firm makes acquisitions and expands into new markets.

Bulls Say William Kerwin, CFA, Senior Equity Analyst, 29 Apr 2026

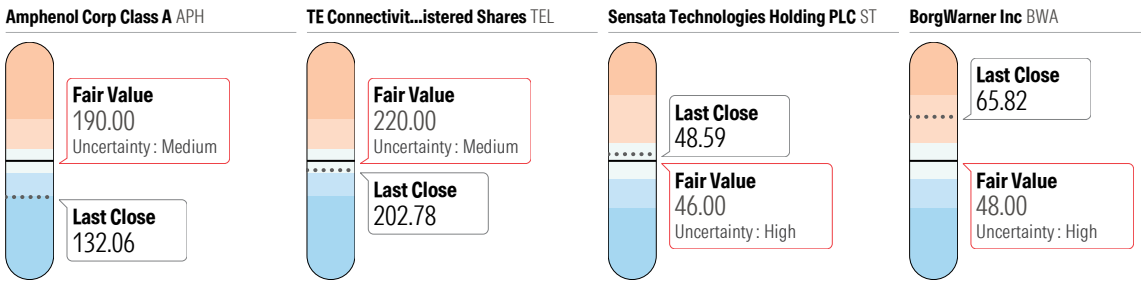

- Amphenol is the most diversified component supplier we cover, giving it better insulation from cyclical downturns in any one market.
- Amphenol's organizational structure, featuring more than 125 general managers who operate with high levels of autonomy, gives it an unparalleled ability to control costs and maintain industry-leading

margins.

- Amphenol benefits from sticky customer relationships, arising from its ability to create customized products in mission-critical applications for harsh conditions.

Bears Say William Kerwin, CFA, Senior Equity Analyst, 29 Apr 2026

- Amphenol relies on bolt-on M&A to maintain its top-line growth. Rising valuations could cause it to overpay for a target or make an ill-advised purchase.
- Amphenol derives about 25% of its revenue from new products. Any slowdown in its ability to innovate could hamper its growth prospects.
- Amphenol derives almost a third of its revenue from China. Any potential trade restrictions between the US and China could pose a threat to its revenue from the region.

Economic Moat William Kerwin, CFA, Senior Equity Analyst, 29 Apr 2026

MORNINGSTAR®

Amphenol Corp Class A APH ★★★★ 26 May 2026 21:25, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
132.06 USD 22 May 2026	190.00 USD 30 Apr 2026 03:04, UTC	0.73	171.69 USD Bil 26 May 2026	Wide	Large Growth	Medium	Exemplary	26 May 2026 05:00, UTC

We assign Amphenol a wide economic moat rating, based on intangible assets and switching costs. These moat sources, paired with Amphenol's superior cost management, lead to strong returns on invested capital that we expect to endure, more likely than not, for the next 20 years.

We think switching costs are the primary moat source for advantaged components suppliers. Amphenol designs components into mission-critical systems like electric vehicle battery management systems, advanced driver-assistance systems, avionics systems, and power grids. These applications carry outsize costs to electrical failure, in our view. If there's an electronic part failure in a consumer device like a smartphone or gaming console, it results in customer inconvenience and a potential loss of future sales for the original equipment manufacturer. If there's a similar failure in a mission-critical system, the results can be catastrophic, such as driver or passenger injury or death, or widespread power outages with knock-on adverse effects. With these high costs to failure as a backdrop, OEMs for these applications are highly risk-averse and require components to work flawlessly 100% of the time, no matter what the circumstance or context. As such, strong suppliers like Amphenol build components to withstand harsh environments like heat, cold, water, snow, ice, sand, dirt, intense vibration, electromagnetic interference, and even explosions, depending on the application. In our view, Amphenol has earned the trust of risk-averse OEM customers across niche marketplaces with a flawless operating history, and its customers have a very high bar for switching away from a trusted incumbent supplier for mission-critical applications.

We believe an additional facet of switching costs is derived from highly integrated relationships between Amphenol and its customers. Once Amphenol wins a design, it takes on the role of a design partner, often moving a team of engineers on-site at a customer to build out the system in question. This adds an incumbent advantage to Amphenol. Both teams build relationships, share knowledge, and have experience from working on previous designs together. We contend that these close relationships add a layer of stickiness to mission-critical products. We think customer switching costs are tangible and include the time and cost of system redesign, retraining to learn and integrate the intricacies of a competitor's proprietary technology, the lead time and expense of designing and testing the new system, the potential for disruption during production, and the purchase or relocation of heavy equipment or manufacturing. We think that customers looking to build a new product iteration or model are more likely than not to choose incumbent Amphenol and avoid the time, cost, and risk of using a new supplier.

Amphenol also boasts strong design and engineering abilities, in our view, exhibiting intangible assets that supplement its moat. Nearly all electronic components are custom or semi-custom, with each customer using its own proprietary designs and needing specific requirements for components to fit in. Amphenol has an expansive array of individual connectors and sensors at its disposal to design custom systems in collaboration with its customers. In cutting-edge applications like new vehicles and communications equipment, system requirements are constantly evolving, requiring new tweaks to

Amphenol Corp Class A APH ★★★★ 26 May 2026 21:25, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
132.06 USD 22 May 2026	190.00 USD 30 Apr 2026 03:04, UTC	0.73	171.69 USD Bil 26 May 2026	Wide	Large Growth	Medium	Exemplary	26 May 2026 05:00, UTC

electronic component content that incentivize custom design.

We think lower-value consumer applications are more standardized and less differentiated, but Amphenol focuses on custom designs for cutting-edge applications that lead to pricing power in order to maintain strong gross margins and fend off lower-priced competition. Amphenol's research and development budget is focused on advancing new products that will enable new use cases at customers, like new high-voltage systems in an electric vehicle, or higher-speed data transfer in a data center or mobile network base station.

Amphenol discloses that it averages 25% of annual sales from products released in the last two years. It has shrewdly assembled a diverse portfolio with best-of-breed technologies across end markets. None of its eight end markets makes up more than 25% of its top line; in contrast, peers like TE Connectivity or Sensata hold a majority concentration in the cyclical transportation end market. We think this is the result of Amphenol focusing on products where it has a clear technology lead, like in military applications or high-speed backplanes for cloud data centers. As a result of focusing on highly differentiated products for new applications, Amphenol commands pricing power over most rivals. We don't foresee a competing supplier being able to successfully undercut Amphenol on price because it wouldn't be able to match design prowess or reliability.

Amphenol pairs its pricing power with efficient cost management that leads to consistently high operating profits, even during a down year like 2020 during the covid-19 pandemic. Amphenol uses a savvy localized manufacturing model, along with a mix of outsourcing, to lower costs and maintain steadier profitability than its competition. Amphenol uses numerous, small manufacturing sites co-located with customers to save on shipping and selling costs and be more responsive to end customer demand. Its greater mix of outsourcing also leads to a more capital-light model that augments its returns on invested capital. Lighter physical capital intensity makes Amphenol good at weathering downcycles, as it has less idle fixed costs to stomach during periods of soft demand—evidenced by its tight range for gross margin historically.

Amphenol has an excellent record of managing operating expenses. It achieves significantly lower operating expenses than competitors through a greater mix of lower-cost operations in Asia and a specialized decentralized model that gives a large amount of pricing and cost management autonomy to over 130 general managers globally. This decentralized model makes Amphenol unusually nimble to respond to rapidly changing demand environments and maintain its strong operating profitability through the course of a cycle. Amphenol's cost-management efficiency shows in its industry-leading operating margins as well as its margin stability. Its historical 10-year standard deviation for both gross and operating margins comes in well below any peer at just 0.5%.

While stellar management and execution, in isolation, are not enough to warrant an economic moat, we

MORNINGSTAR®

Amphenol Corp Class A APH ★★★★ 26 May 2026 21:25, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
132.06 USD 22 May 2026	190.00 USD 30 Apr 2026 03:04, UTC	0.73	171.69 USD Bil 26 May 2026	Wide	Large Growth	Medium	Exemplary	26 May 2026 05:00, UTC

think Amphenol makes the most of its durable competitive advantages, in terms of high customer switching costs and intangible assets around component designs, to generate industry-leading economic profit margins across macroeconomic backdrops. All these factors give us confidence that Amphenol will generate excess returns on capital, more likely than not, over the next 20 years.

Fair Value and Profit Drivers William Kerwin, CFA, Senior Equity Analyst, 29 Apr 2026

Our fair value estimate is $190 per share, which implies a 2026 adjusted price/ earnings multiple of 37 times and an enterprise value/sales multiple of 7 times. It implies a multiple of 30 times 2027 non-GAAP earnings and 26 times 2028 non-GAAP earnings.

We expect Amphenol's top line to grow at a 19% compound annual rate through 2030, including more than 45% growth in 2026. In 2026, as in 2025, significant acquisitions are expected, including the acquisition of substantially all of CommScope which closed in the first quarter. Organically, we estimate closer to 30% growth in 2026, which is still extremely positive. In the longer term, we see normalized growth for Amphenol in the high single digits, though we expect AI infrastructure investments to provide upside to this over the medium term.

We see data center and AI revenue becoming the firm's primary driver. Amphenol's IT datacom market, which primarily serves data center products, grew 55% in 2024 and 124% in 2025. We expect 80% growth in 2026 and close to 20% growth thereafter. We anticipate that cloud and data center buildouts to accommodate the ever-increasing bandwidth demand will continue to drive demand for Amphenol's optical fiber connectors in data center infrastructure.

Outside of data centers and AI, we expect solid organic growth for the automotive, industrial, defense, and mobile networks markets. We also expect Amphenol to continue using acquisitions to maintain a diversified end market profile. We anticipate mid-single-digit growth for the automotive market as it benefits from content growth arising from electrification and connectivity over low automotive production growth. We also believe that the proliferation of heavy vehicle electrification and renewable energy will drive mid-single digit sales into the industrial end market. In the defense market, we expect strong growth in the low double digits as digitization proliferates in ships, planes, satellites, and weapons systems.

Amphenol's cost management is exceptional, with a localized, decentralized cost structure that generates impressive, consistent profitability. We expect this to continue and forecast the firm to remain in the high 20% range for non-GAAP operating margins in the medium-term, reaching 30% in 2030. This is well above historical levels closer to 20%, which we saw as strong and above peers already. We believe rapidly rising AI sales volume across a relatively concentrated customer base is providing the firm with strong leverage to further strengthen its already-strong margin profile and maintain these best-in-class levels.

Risk and Uncertainty William Kerwin, CFA, Senior Equity Analyst, 22 Oct 2025

We assign Amphenol a Morningstar Uncertainty Rating of Medium. While the firm must constantly innovate and refresh its product portfolio to avoid commoditization and maintain its competitive advantage, its distinctive organizational structure and diversified end-market composition insulate it from downturns in any individual end market. Still, Amphenol does derive roughly 40% of its sales from communications markets, including the notably cyclical mobile devices market. While this concentration could make Amphenol susceptible to a broader downturn, we think this is well divided among devices, wireless networks, wired data, and broadband, and we don't think these markets experience simultaneous demand trends.

Amphenol could face risk from its global operating model. With most sales outside the US, and nearly one-third from the China market, any trade uncertainties between the US and other nations could hamper Amphenol's sales. However, we think Amphenol's products are basic enough to not pose as much of a national security risk and be the target of trade restrictions, compared with semiconductors. The firm could face risk from significant fluctuations in foreign-exchange rates, but given its decentralized operating model, it is generally able to spend money in the countries where it is earned. Amphenol could face downside risk from its bolt-on M&A strategy. Given the firm has historically produced one-third of its top-line growth inorganically, any slowdown in M&A could slow growth. Additionally, given the ongoing consolidation across the electrical component industry, prices may be driven to unattractive valuations, forcing Amphenol to overpay to extend its runway for sales growth. We don't expect material environmental, social, or governance risk for Amphenol. The firm's goals on this front include engaging with suppliers on best practices and reducing greenhouse emissions, which we believe are in line with industry peers.

Capital Allocation William Kerwin, CFA, Senior Equity Analyst, 29 Apr 2026

We assign Amphenol an Exemplary Morningstar Capital Allocation Rating based on a sound balance sheet, exceptional execution on investments, and appropriate shareholder distributions.

We assess the balance sheet as sound due to low net debt/EBITDA and low net debt to our estimate of enterprise value. We assess Amphenol's investments as exceptional. Amphenol has an excellent record of adding value through bolt-on acquisitions that expand its breadth while quickly bringing them up to firmwide profitability. Over the past 10 years, Amphenol has acquired more than 40 companies, which it credits for contributing about one-third of its top-line growth. Amphenol prefers to allocate capital to acquisitions rather than internal development, spending about half as much on R&D as a percentage of sales as its top competitor, TE Connectivity. However, we think management has done an excellent job identifying and integrating acquisitions. As a result of its decentralized organizational structure, Amphenol can offer the benefits of its global supply chain and its broad set of technological capabilities to acquisitions, quickly bringing them up to Amphenol's best-of-industry operating margins and

132.06 USD 22 May 2026	190.00 USD 30 Apr 2026 03:04, UTC	0.73	171.69 USD Bil 26 May 2026	Wide	Large Growth	Medium	Exemplary	26 May 2026 05:00, UTC

affording them cross-selling opportunities. Oftentimes, the CEO of the acquiree will stay on as an additional general manager at Amphenol and maintain autonomy for cost controls and production. For example, when Amphenol bought FCI for $1.3 billion in 2016, FCI was operating roughly 500 basis points below Amphenol's operating margins, and it took no more than six months to bring FCI up to firm-level profitability.

As Amphenol grows, management has committed to achieving one-third of its growth inorganically. To do this, it will have to seek more deals or larger acquisitions. We see the recent acquisition of substantially all of CommScope, for more than $10 billion, as evidence that it is mostly seeking the latter path. We don't expect deals of this size every year, but we believe Amphenol will seek assets at the right time, and we observe the firm getting strong returns even on the larger deals.

Amphenol returns the remainder of its excess capital to shareholders. Amphenol pays a quarterly dividend and has maintained a dividend payout ratio above 20% since 2019. Amphenol also conducts opportunistic share repurchases. In total, it has returned 52% of its free cash flow to shareholders over the past five years.

Analyst Notes Archive

Amphenol Earnings: As Usual for This Blue-Chip Name, Long-Term Investors Should Buy the Dip

William Kerwin, CFA,Senior Equity Analyst,28 Jan 2026

Amphenol's fourth-quarter results crushed management's guidance, and the firm guided to strong sequential growth with the CommScope acquisition now closed. Shares sold off more than 10% after hours, however, due to an implied sequential decline in organic revenue in the first quarter. Why it matters: We aren't worried about the organic step-down next quarter, which is typical for seasonal businesses like automotive and enterprise networks. We expect sequential AI growth. The organic guidance missed our model, but the early close to CommScope is accretive to 2026 results. By our estimates, Amphenol's AI revenue eclipsed $4 billion in 2025, more than quadrupling from 2024. We expect immense AI growth to continue to propel Amphenol's overall top line, and project 70% AI sales growth in 2026, followed by annualized growth close to 30%. Despite rising data center and AI concentration, Amphenol exhibits the best diversification of its peers. The firm remains one of our long-term favorites in technology hardware, with best-in-class profitability, cost management, and execution. The bottom line: We raise our fair value estimate for wide-moat Amphenol to $170 per share, from $135, reflecting higher AI growth and profitability forecasts. We see the market sell-off as an overreaction to short-term guidance. Our long-term growth thesis is intact, and we like the current entry point. CommScope should be immediately accretive to revenue and earnings, with management guiding for $4.1 billion in revenue and $0.15 in earnings accretion. We like the deal expanding Amphenol's data center, industrial, and networking opportunities. Amphenol is often an attractive position to add to in the face of a sell-off. The firm's wide-moat portfolio and stellar capital allocation

Amphenol Corp Class A APH ★★★★ 26 May 2026 21:25, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
132.06 USD 22 May 2026	190.00 USD 30 Apr 2026 03:04, UTC	0.73	171.69 USD Bil 26 May 2026	Wide	Large Growth	Medium	Exemplary	26 May 2026 05:00, UTC

make it a long-term compounder. We see AI powering attractive long-term growth, and it accounts for more than half of our total growth forecast.

Amphenol Earnings: Superb Quarter and Big Valuation Increase William Kerwin, CFA,Senior Equity Analyst,22 Oct 2025

Amphenol's third-quarter results vastly exceeded guidance, with sales rising 53% year over year to $6.2 billion and non-GAAP operating margin rising 560 basis points year over year to 27.5%. Fourth-quarter guidance implies a sequential moderation in sales and profitability.Why it matters: Amphenol is making a habit of blowout quarters. Quarterly revenue has nearly doubled in the past two years, with artificial intelligence infrastructure driving huge demand for Amphenol and expanding profitability. Guidance again appears conservative to us. Acquisitions are adding to Amphenol's strong organic growth. We like the company's rapid integration of high-quality assets and the strong returns earned once embedded in its portfolio. We like that acquisitions are maintaining a diversified end-market exposure against high-flying AI growth.The bottom line: We've raised our fair value estimate for wide-moat Amphenol to $135 per share from $95 after raising our AI revenue forecast and including the impact of impending acquisitions. The shares look fairly valued to us. We now expect 50% growth (40% organic) in 2025 and 30% growth (20% organic) in 2026, driven by strong organic AI sales and the acquisitions of substantially all of CommScope and Trexon, among others. We see medium-term organic growth in the low double digits with AI demand. We again raised our AI forecast, as Amphenol has regularly exceeded our expectations. We expect $10 billion in AI revenue in 2029 versus less than $1 billion in 2024. Amphenol's data center connectivity attaches to leading platforms like Nvidia's Blackwell and upcoming Rubin.Coming up: Amphenol's large impending acquisitions should close in the next two quarters: Trexon ($1 billion purchase price for $290 million annual sales) in the fourth quarter, and CommScope's connectivity and cable solutions business ($10.5 billion purchase price for $3.6 billion annual sales) in the first quarter of 2026.

Amphenol: CommScope Deal Widens Data Center Opportunity and Comes at a Fair Price William Kerwin, CFA,Senior Equity Analyst,4 Aug 2025

Amphenol announced a deal to acquire CommScope's Connectivity and Cable Solutions business for $10.5 billion in cash. Management estimates the business at $3.6 billion in sales and 26% EBITDA margins in 2025. Management expects the deal to close in the first half of 2026. Why it matters: The deal is Amphenol's biggest-ever acquisition by a wide margin, and reflects increasing investment in data center connectivity, which is the firm's highest-growth end market. Forty percent of CCS is sales of connectivity into the data center, including fiber optics. We see this as an attractive growth opportunity alongside Amphenol's rapidly growing data center portfolio that is benefitting from AI investment. After completing the acquisition of the wireless and antenna business from CommScope this year, Amphenol has now agreed to acquire the vast majority of CommScope over two years. To us, this reflects the

MORNINGSTAR®

Amphenol Corp Class A APH ★★★★ 26 May 2026 21:25, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
132.06 USD 22 May 2026	190.00 USD 30 Apr 2026 03:04, UTC	0.73	171.69 USD Bil 26 May 2026	Wide	Large Growth	Medium	Exemplary	26 May 2026 05:00, UTC

purchase of solid assets that management believes it can operate better. The bottom line: We maintain our $95 fair value estimate for Amphenol, as we believe the deal is a good strategic fit and the firm is paying a fair price for the asset. Shares rose 4% intraday on the announcement, and we view them as modestly overvalued. As usual for Amphenol, we expect better management for CCS under the Amphenol umbrella, with access to lower-cost inputs and greater market access. We view Amphenol as an excellent acquirer, quickly raising target profitability and providing high levels of autonomy to acquired firms. We expect Amphenol to raise upwards of $8 billion in debt to finance the deal, but we don't worry about leverage. We estimate Amphenol to end 2026 with a net leverage ratio below 2 times, in line with management targets, and expect a swift deleveraging thereafter with heady cash flow.

Amphenol Earnings: Few Superlatives Can Adequately Describe a Quarter This Good; Valuation Increased William Kerwin, CFA,Senior Equity Analyst,23 Jul 2025

Amphenol's second-quarter results crushed guidance. Revenue rose 57% year over year (41% organically) and 17% sequentially to $5.65 billion. Non-GAAP operating margin rose 210 basis points sequentially to 25.6%. Third-quarter guidance implies a low sequential decline from these levels. Why it matters: Even by Amphenol's high standards, this was a massive blowout quarter. Sales into every end market rose double digits year over year, and artificial intelligence drove 133% growth for Amphenol's IT data end market, reaching $2 billion in quarterly sales. AI sales are approaching a $1 billion quarterly run rate, with a long runway ahead for more growth. Management guided to a sequential decline in the third quarter, which we see as conservative. AI sales can be lumpy. Over the next five years, we project more than 50% annualized growth. Operating margins are now 500 basis points higher than levels just two years ago that we already saw as industry leading. We credit high AI sales volumes to a concentrated customer base for the expansion and see these impressive levels as maintainable. The bottom line: We raise our fair value estimate for wide-moat Amphenol to $95 per share, from $80. We've raised our AI growth forecast and our operating margin forecast, seeing current profitability levels as durable with higher leverage on high AI sales volumes. Shares look fairly valued to us. Amphenol stock is up 50% since reporting first-quarter earnings in April, when we saw shares as a bargain. We believe Amphenol is being correctly valued as a blue-chip operator with industry-leading profitability and a remarkable AI growth opportunity. Despite monster outperformance, shares dipped intraday on July 23, which we see as an overreaction to conservative guidance. Amphenol is known for soft guidance. Even if it simply meets guidance next quarter, that would be roughly 5% higher than our prior estimates.

Amphenol Earnings: An Outstanding Quarter and a Good Investment for Uncertain Times William Kerwin, CFA,Senior Equity Analyst,23 Apr 2025

Amphenol's first-quarter results blew past management's guidance. Sales of $4.8 billion rose 48% year over year (guidance was $4.1 billion) and non-GAAP operating margin reached a record 23.5%. Second-quarter guidance implies further growth, with a sales midpoint just under $5.0 billion. Why it matters:

MORNINGSTAR®

Amphenol Corp Class A APH ★★★★ 26 May 2026 21:25, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
132.06 USD 22 May 2026	190.00 USD 30 Apr 2026 03:04, UTC	0.73	171.69 USD Bil 26 May 2026	Wide	Large Growth	Medium	Exemplary	26 May 2026 05:00, UTC

Amphenol's outstanding performance reflects phenomenal execution in end markets that are exhibiting mixed demand. Both results and guidance were well above our above-consensus forecasts, and we expect continued strong growth through the rest of 2025. Artificial intelligence investment is shining as Amphenol's primary growth driver. Data center revenue rose 133% year over year, with most of that coming from AI-specific sales. We estimate Amphenol's AI revenue at more than a $2 billion annual run rate today, and we expect rapid growth to continue. Automotive and industrial demand, particularly in Europe and parts of North America, remains soft. We believe Amphenol is doing a good job striking deals in this climate and maintaining stable results while other markets like data centers and defense drive growth. The bottom line: We raise our fair value estimate for shares of wide-moat Amphenol to $80, from $69, as we again raise our forecast for AI and data center revenues over the next five years. We now see shares as nicely undervalued for the high-quality, blue-chip stock. We believe Amphenol is a strong investment for uncertain times, given its best-in-class flexibility and execution that arise from its decentralized structure and informs our wide-moat rating. We point to outperformance over peer results in prior downturns (like in 2020) as one proof point. Amphenol's terrific profitability, also underpinned by its flexible, decentralized structure, continues to get even better. We now expect non-GAAP operating margins above 22% throughout our forecast, significantly above its historical 20% level and well above its peer group.

DeepSeek R1 Model Doesn't Alter Our Valuations or Forecasts for Technology Hardware Stocks

William Kerwin, CFA,Senior Equity Analyst,27 Jan 2025

Many technology hardware stocks under our coverage plunged in Monday trading after reports of DeepSeek's R1 generative artificial intelligence model out of China offering performance parity to top US models at a much lower training cost. The iShares Semiconductor ETF was down 8% in midday trading.Why it matters: In our view, the market selloff implies fears of weaker future generative AI infrastructure investment resulting from cheaper models. We are less pessimistic and expect strong generative AI investment to continue. We've expected generative AI models to become slimmer and more efficient. We expect US model builders to develop more efficient models, but overall hardware spending will continue to rise, particularly with a serious competitive alternative out of China. In the longer term, we foresee a commoditization of AI models that shouldn't diminish investment in hardware infrastructure. Lower-cost models should accelerate the path to financial returns for model builders, but that they will continue to invest heavily in hardware to support them.The bottom line: We maintain our fair value estimates and moat ratings for our technology hardware coverage, including Apple, Broadcom, Marvell Technology, Arista Networks, and Micron Technology. The DeepSeek news and market selloff don't alter our long-term forecasts today. We don't expect a cut to infrastructure investment in the short term and believe US and European model builders will continue to invest heavily in developing larger and higher-performing models. Demand still exceeds chip supply, and we don't expect that to change due to the DeepSeek news. We believe the selloff largely reflects more

ESG Risk Rating Breakdown

Exposure	
Company Exposure[1]	35.5
– Manageable Risk	32.9
Unmanageable Risk[2]	**2.6**
Management	
Manageable Risk	32.9
– Managed Risk[3]	16.4
Management Gap[4]	**16.5**
Overall Unmanaged Risk	**19.1**

- Exposure represents a company's vulnerability to ESG risks driven by their business model
- Exposure is assessed at the Subindustry level and then specified at the company level
- Scoring ranges from 0-55+ with categories of low, medium, and high-risk exposure

- Management measures a company's ability to manage ESG risks through its commitments and actions
- Management assesses a company's efficiency on ESG programs, practices, and policies
- Management score ranges from 0-100% showing how much manageable risk a company is managing

ESG Risk Rating

ESG Risk Ratings measure the degree to which a company's value is impacted by environmental, social, and governance risks, by evaluating the company's ability to manage the ESG risks it faces.

ESG Risk Rating Assessment[5]

ESG Risk Rating is of May 26, 2026. Highest Controversy Level is as of May 08, 2026. Sustainalytics Subindustry: Electronic Components. Sustainalytics provides Morningstar with company ESG ratings and metrics on a monthly basis and as such, the ratings in Morningstar may not necessarily reflect current Sustainalytics' scores for the company. For the most up to date rating and more information, please visit: sustainalytics.com/esg-ratings/.

1. A company's Exposure to material ESG issues 2. Unmanageable Risk refers to risks that are inherent to a particular business model that cannot be managed by programs or initiatives 3. Managed Risk = Manageable Risk multiplied by a Management score of 49.8% 4. Management Gap assesses risks that are not managed, but are considered manageable 5. ESG Risk Rating Assessment = Overall Unmanaged Risk = Management Gap plus Unmanageable Risk

Peer Analysis 26 May 2026

Peers are selected from the company's Sustainalytics-defined Subindustry and are displayed based on the closest market cap values

MORNINGSTAR®

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, indepth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss shortterm market-price movements), but we believe these negatives are mitigated by deep analysis and our longterm approach.

Morningstar's equity research group ("we," "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our singlepoint star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

When considering a company's moat, we also assess whether there is a substantial threat of value destruction, stemming from risks related to ESG, industry disruption, financial health, or other idiosyncratic issues. In this context, a risk is considered potentially value destructive if its occurrence would eliminate a firm's economic profit on a cumulative or midcycle basis. If we deem the probability of occurrence sufficiently high, we would not characterize the company as possessing an economic moat.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in workingcapital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

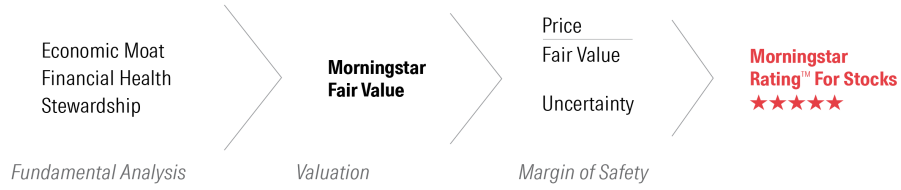

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total present value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty Around That Fair Value Estimate

Morningstar's Uncertainty Rating is designed to capture the range of potential outcomes for a company's intrinsic value. This rating is used to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating is aimed at identifying the confidence we should have in assigning a fair value estimate for a given stock.

Our Uncertainty Rating is meant to take into account anything that can increase the potential dispersion of future

MORNINGSTAR®

Research Methodology for Valuing Companies

outcomes for the intrinsic value of a company, and anything that can affect our ability to accurately predict these outcomes. The rating begins with a suggested rating produced by a quantitative process based on the trailing 12-month standard deviation of daily stock returns. An analyst overlay is then applied, with analysts using the suggested rating, historical rating data, and their own knowledge of the company to inform them as they make the final Uncertainty Rating decision. Ultimately, the rating decision rests with the analyst. Analysts take into account many characteristics when making their final decision, including cyclical factors, operational and financial factors such as leverage, company-specific events, ESG risks, and anything else that might increase the potential dispersion of future outcomes and our ability to estimate those outcomes.

Our recommended margin of safety—the discount to fair value demanded before we'd recommend buying or selling the stock—widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the potential dispersion of outcomes, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the Uncertainty Rating provides guidance in portfolio construction based on risk tolerance.

Our Uncertainty Ratings are: Low, Medium, High, Very High, and Extreme.

	Margin of Safety	
Qualitative Analysis Uncertainty Ratings	★★★★★Rating	★Rating
Low	20% Discount	25% Premium
Medium	30% Discount	35% Premium
High	40% Discount	55% Premium
Very High	50% Discount	75% Premium
Extreme	75% Discount	300% Premium

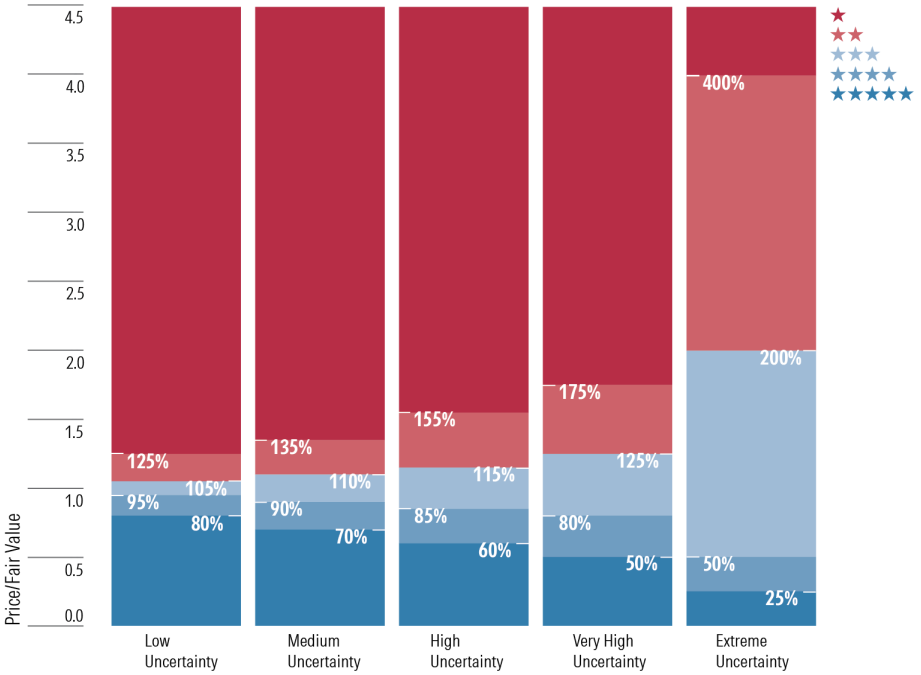

Our uncertainty rating is based on the interquartile range, or the middle 50% of potential outcomes, covering the 25th percentile–75th percentile. This means that when a stock hits 5 stars, we expect there is a 75% chance that the intrinsic value of that stock lies above the current market price. Similarly, when a stock hits 1 star, we expect there is a 75% chance that the intrinsic value of that stock lies below the current market price.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more details about our methodology, please go to https://shareholders.morningstar.com

Morningstar Equity Research Star Rating Methodology

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

★★★★★ We believe appreciation beyond a fair risk adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

★★★★ We believe appreciation beyond a fair risk-adjusted return is likely.

★★★ Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

★★ We believe investors are likely to receive a less than fair risk-adjusted return.

★ Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments,

MORNINGSTAR®

Research Methodology for Valuing Companies

and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments, and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Sustainalytics ESG Risk Rating Assessment: The ESG Risk Rating Assessment is provided by Sustainalytics; a Morningstar company.

Sustainalytics' ESG Risk Ratings measure the degree to which company's economic value at risk is driven by environment, social and governance (ESG) factors.

Sustainalytics analyzes over 1,300 data points to assess a company's exposure to and management of ESG risks. In other words, ESG Risk Ratings measures a company's unmanaged ESG Risks represented as a quantitative score. Unmanaged Risk is measured on an open-ended scale starting at zero (no risk) with lower scores representing less unmanaged risk and, for 95% of cases, the unmanaged ESG Risk score is below 50.

Based on their quantitative scores, companies are grouped into one of five Risk Categories (negligible, low, medium, high, severe). These risk categories are absolute, meaning that a 'high risk' assessment reflects a comparable degree of unmanaged ESG risk across all subindustries covered.

The ESG Risk Rating Assessment is a visual representation of Sustainalytics ESG Risk Categories on a 1 to 5 scale. Companies with Negligible Risk = 5 Globes, Low Risk = 4, Medium Risk = 3 Globes, High Risk = 2 Globes, Severe Risk = 1 Globe. For more information, please visit sustainalytics.com/esg-ratings/

Ratings should not be used as the sole basis in evaluating a company or security. Ratings involve unknown risks and uncertainties which may cause our expectations not to occur or to differ significantly from what was expected and should not be considered an offer or solicitation to buy or sell a security.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of the report is Morningstar Research Services LLC, a U.S.A. domiciled financial institution.

This Report is for informational purposes, should not be the sole piece of information used in making an investment decision, and has no regard to the specific investment objectives, financial situation or particular needs of any specific recipient. This publication is intended to provide information to assist investors in making their own investment decisions, not to provide investment advice to any specific investor. Therefore, investments discussed herein may not be suitable for all investors; investors must exercise their own independent judgment as to the suitability of such investments and recommendations in the light of their own investment objectives, experience, taxation status and financial position. Morningstar encourages Report recipients to read all relevant issue documents (e.g., prospectus) pertaining to the security concerned, including without limitation, information relevant to its investment objectives, risks, and costs before making an investment decision and when deemed necessary, to seek the advice of a financial, legal, tax, and/or accounting professional. The information, data, analyses and opinions presented herein are not warranted to be accurate, correct, complete or timely. Unless otherwise provided in a separate agreement, neither Morningstar, Inc. or the Equity Research Group represents that the report contents meet all of the presentation and/or disclosure standards applicable in the jurisdiction the recipient is located.

Except as otherwise required by law or provided for in a separate agreement, the analyst, Morningstar, Inc. and the Equity Research Group and their officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions within the report.

The Report and its contents are not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Morningstar, Inc. or its affiliates to any registration or licensing requirements in such jurisdiction.

by local and/or regional regulatory bodies, including laws in connection with the distribution third-party research reports.

Conflicts of Interest

- No interests are held by the analyst with respect to the security subject of this investment research report.
- Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com
- Analysts' compensation is derived from Morningstar, Inc.'s overall earnings and consists of salary, bonus and in some cases restricted stock.
- Neither Morningstar, Inc. or the Equity Research Group receives commissions for providing research nor do they charge companies to be rated.
- Morningstar's overall earnings are generated in part by the activities of the Investment Management and Research groups, and other affiliates, who provide services to product issuers.
- Morningstar employees may not pursue business and employment opportunities outside Morningstar within the investment industry (including but not limited to, working as a financial planner, an investment professional or investment professional representative, a broker-dealer or broker-dealer agent, a financial writer, reporter, or analyst) without the approval of Morningstar's Legal and if applicable, Compliance teams.
- Neither Morningstar, Inc. or the Equity Research Group is a market maker or a liquidity provider of the security noted within this report.
- Neither Morningstar, Inc. or the Equity Research Group has been a lead manager or co-lead manager over the previous 12-months of any publicly disclosed offer of financial instruments of the issuer.
- Morningstar, Inc.'s investment management group does have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them.
- Morningstar, Inc. is a publicly traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section https://shareholders.morningstar.com/investor-relations/financials/sec-filings/default.aspx
- Morningstar, Inc. may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar, Inc.'s conflict of interest policies is available from http://global.morningstar.com/equitydisclosures. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

Risk Warning Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security's investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions.
