BlackRock Earnings: Market Losses Offset Strong Inflows in Volatile Q1; Shares Undervalued

Analyst Note Greggory Warren, CFA, Senior Equity Analyst, 14 Apr 2026

BlackRock ended the first quarter of 2026 with $13.895 trillion in assets under management, up 19.9% year over year but down 1.0% sequentially. It benefited from strong flows into its exchange-traded fund offerings, offset by market losses during the quarter.

Why it matters: BlackRock continues to outperform its traditional asset management peers from an organic AUM growth perspective with its mix of index funds and ETFs, while an expansion of its private capital platform has only added to its ability to generate positive flows on a more consistent basis.

- Net long-term inflows of $136 billion during the first quarter represented an annualized organic AUM growth rate of 4.2%, above the midrange of our annual target rate range of 3% to 5%. We expect to see lower rates of growth from most of BlackRock's peers when they report.
- The iShares platform remains the biggest driver of flows, with BlackRock picking up another $132 billion in net long-term inflows—equivalent to a 9.7% annualized organic AUM growth rate—from its ETF business during the March quarter.

The bottom line: We expected the first quarter of 2026 to be more difficult, given the impact that the Iran war had on the equity and credit markets in March, but BlackRock continues to benefit from the diversification of its investment portfolio, which allows clients to rotate more quickly during volatile markets and keeps assets in-house.

Industry Asset Management

Business Description

BlackRock is the largest asset manager in the world, with $14.041 trillion in assets under management at the end of December 2025. Its product mix is diverse, with 55% of managed assets in equity strategies, 23% in fixed income, 9% in multi-asset classes, 6% in money market funds, and 5% in alternatives. Passive strategies account for more than two-thirds of long-term AUM, with the company's ETF platform maintaining a leading market share domestically and on a global basis. Product distribution is weighted more toward institutional clients, which, by our calculations, account for around 80% of AUM. BlackRock is geographically diverse, with clients in more than 100 countries and more than one-third of managed assets coming from investors domiciled outside the US and Canada.

- As there was little in the wide-moat-rated firm's first-quarter results that varied from our expectations, or would alter our long-term view of the firm, we expect to leave our $1,150 per share fair value estimate in place. We view the shares as slightly to modestly undervalued right now.
- We expect to remain conservative with our near-term assumptions for BlackRock and the rest of the US-based asset managers, believing that the Iran war, as well as governmental policies put in place this past year, will keep the equity and fixed-income markets more volatile.

Business Strategy & Outlook Greggory Warren, CFA, Senior Equity Analyst, 30 Mar 2026

For much of the past two decades, we've bemoaned the fortunes of the US-based traditional asset managers, noting that they would face significant secular headwinds (from aging baby boomers to the growth of passive investing) and cyclical headwinds (leading to more-volatile equity and credit markets) that would pressure their top and bottom lines. Regulatory changes around the globe aimed at increasing transparency around fees and performance, as well as pushing for a greater degree of fiduciary responsibility in retail-advised relationships, have only raised the hurdles for the US-based traditional asset managers we cover. With the gatekeepers for retail intermediary platforms also becoming much more focused on fees and performance when deciding what products to place on their platforms, the industry is facing both fee and margin compression as active asset managers are expected to not only narrow the spread between the management fees charged for their funds and the fees attached to index-based products but spend more heavily to improve investment performance and enhance product distribution.

Unlike most of its peers, BlackRock, which is at its core a passive investment shop, has been able to offset many of the secular headwinds that have been facing the US-based traditional asset managers with a few tailwinds of their own. Through the company's exchange-traded fund platform and institutional index fund offerings, the wide-moat firm sources close to two-thirds of its managed assets and more than half of its revenue from passive products. In an environment where retail-advised and institutional clients are expected to seek out providers of passive products, as well as active asset managers that have greater scale, established brands, solid long-term performance, and reasonable fees, we believe that BlackRock is well-positioned. Looking out over the next five-plus years, we believe that an expanding ETF market, improved active fund operations, increased multi-asset and alternatives exposure (primarily through acquisitions), and ongoing investments in technology will help drive top- and bottom-line growth for the firm, even if the near term is a bit bumpy.

Bulls Say Greggory Warren, CFA, Senior Equity Analyst, 30 Mar 2026

- BlackRock is the largest asset manager in the world, with $14.042 trillion in AUM at the end of December 2025 and clients in more than 100 countries.
- Product diversity and a heavier concentration in the institutional channel have traditionally provided BlackRock with a much more stable set of managed assets than its peers.

- BlackRock's well-diversified product mix makes it agnostic to shifts among asset classes and investment strategies, limiting the impact that market swings or withdrawals from individual asset classes or investment styles can have on its AUM.

Bears Say Greggory Warren, CFA, Senior Equity Analyst, 30 Mar 2026

- The sheer size and scale of BlackRock's operations could end up being the biggest impediment to the firm's long-term growth.
- Despite accounting for 52% of total AUM, direct institutional client arrangements generate only 33% of BlackRock's base management fees, given the lower fee structure attached to these larger investment mandates.
- While actively managed funds account for 24% of total AUM, they generate 44% of base management fees, increasing the pressure on BlackRock to get the performance of its active equity and fixed-income offerings on a more consistent footing.

Economic Moat Greggory Warren, CFA, Senior Equity Analyst, 22 Jan 2026

We believe the asset-management business can be conducive to the creation of economic moats, with switching costs and intangible assets being the most durable sources of competitive advantage. Although the switching costs might not be explicitly large, inertia and the uncertainty of achieving better results by moving from one manager to another, as well as the potential tax consequences of selling a fund with significant gains, tend to keep investors in place. As a result, money that flows into asset-management firms tends to stay there. For the traditional asset management industry overall, the average narrow retention rate, which does not include exchange redemptions, has been 75% or greater annually during the past 5-, 10-, 15-, 20-, 25-, and 30-year time periods. Including exchange redemptions, the rate has been greater than 70% on average.

Firms offering niche products with significantly higher switching costs—like retirement accounts, funds with lockup periods, and tax-managed strategies—have tended to hold on to assets longer. Because BlackRock does not break out its net flows (which are gross sales less investor redemptions), we assume that, based on its historical record of positive organic growth, its average annual redemption rate has been at its worst no worse than the industrywide rate, especially given the tailwinds from the secular shift into low-cost passive products the past couple of decades.

During 2021-25 (2016-25), BlackRock's organic AUM growth rate averaged 4.6% (4.6%) with a standard deviation of 1.2% (1.5%), which meant the firm was, in most years, compensating for investor redemptions with net new flows into its products. We are currently forecasting 5.0% (4.7%) average annual organic AUM growth during 2026-30 (2026-35), with a standard deviation of 1.5% (1.3%). This is in line with management's own long-term target for 5% annual organic AUM growth, as well as at the upper end of our long-term annual target range of 3%-5% growth, driven by slightly better equity flows, as well as a more meaningful uptick in bond fund flows and alternatives fundraising, over the next decade. We expect the firm's ongoing investments in retail distribution, enhanced products and vehicles, and technology to allow BlackRock to retain its better-than-average switching cost profile relative to its traditional asset-management peers.

We believe the traditional asset managers can improve on the switching costs advantage inherent in their business with organizational attributes (such as product mix, distribution channel, and geographic reach) and intangible assets (such as strong and respected brands and manager reputations from a record of generating above-average investment performance relative to peers). While the barriers to entry are not all that significant, the barriers to success are extremely high, as it takes time and skill to not only put together a long enough record of investment performance to gather assets but to build the scale necessary to be competitive. This has meant the larger, more established asset managers in the industry have tended to have an advantage over smaller players, especially when it comes to gaining cost-effective access to distribution platforms. That said, we do not think the cost advantage applies to

MORNINGSTAR®

BlackRock Inc BLK ★★★ 13 Apr 2026 22:29, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
1,023.65 USD 13 Apr 2026	1,150.00 USD 31 Mar 2026 00:19, UTC	0.89	166.14 USD Bil 14 Apr 2026	Wide	Large Value	High	Exemplary	14 Apr 2026 05:00, UTC

the traditional asset managers—except in the case of index fund and ETF providers—as scale does not always confer better-than-average operating profitability and the industry tends to behave as an oligopoly when it comes to pricing.

Competition for investor flows can be stiff and has traditionally centered on investment performance. Although institutional investors and retail gatekeepers are exerting pressure on pricing, competition based on price has been rare, aside from what we've seen in the US market for exchange-traded funds. While compensation remains the single-largest expense for most traditional asset managers, supplier power has been manageable as many firms have reduced their reliance on star managers and have tied manager and analyst pay to both portfolio and overall firm performance. Asset managers that demonstrate an ability to gather and retain investor assets during different market cycles have tended to produce more stable levels of profitability, with returns exceeding their cost of capital for longer periods. While the more broadly diversified asset managers are structurally set up to hold on to assets regardless of market conditions, it has been firms with solid product sets across asset classes (built on repeatable investment processes), charging reasonable fees, and with singular corporate cultures dedicated to a common purpose that have done a better job of gathering and retaining assets.

BlackRock, in our view, has a wide economic moat. Unlike most of its traditional asset-management peers, BlackRock is at its core a passive investment shop, offsetting many of the secular headwinds facing the US-based traditional asset managers with a few tailwinds of its own. Through its iShares exchange-traded fund platform and institutional index fund offerings, the wide-moat firm sources close to two-thirds of its AUM (and more than half its base management fees) from passive products. In an environment where retail-advised and institutional clients are seeking out providers of passive products, as well as active asset managers that have greater scale, established brands, solid long-term performance, and reasonable fees, we believe BlackRock is well-positioned, with a wide moat built on cost advantage, switching costs, and intangible assets.

BlackRock's size and scale, the strength of its brands, and the diversity of its AUM by investment strategy, asset class, distribution channel, and geographic reach provide it with a leg up over peers. The company is the largest asset manager in the world, overseeing $14.041 trillion in AUM at the end of December 2025, with 55% of AUM (48% of base management fees) in equity strategies, 23% (20%) in fixed-income offerings, 9% (7%) in balanced funds, 8% (6%) in money market funds, and 5% (19%) in alternatives. Passive strategies make up 68% of long-term AUM, with the company's ETF platform, which accounted for 39% of managed assets (and 43% of base management fees), maintaining a leading market share both domestically (30%) and globally (30%) at the end of 2025.

Product distribution is weighted more heavily toward institutional clients (including defined contribution plans), which account for around 80% of AUM. BlackRock remains geographically diverse as well, with clients in more than 100 countries and more than a third of its AUM coming from investors

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
1,023.65 USD 13 Apr 2026	1,150.00 USD 31 Mar 2026 00:19, UTC	0.89	166.14 USD Bil 14 Apr 2026	Wide	Large Value	High	Exemplary	14 Apr 2026 05:00, UTC

domiciled outside of the US and Canada. While the firm does not release redemption/retention data for its AUM, we feel that these attributes and the company's other intangible assets have allowed BlackRock to generate above-average levels of organic AUM growth (which is derived from product sales and investor redemptions) on a more consistent basis.

Benefiting from a steady stream of investor inflows, driven by its ability to offer insights and expertise across multiple asset classes, a specialized distribution and client engagement model, low-cost fund offerings with repeatable investment strategies, and its existing relationships with large institutional clients (as well as its positioning as the largest defined contribution investment only provider in the US), BlackRock has recorded net long-term outflows in only 14 calendar quarters over the past two decades. Furthermore, the firm's cost-conscious culture and stable AUM and revenue levels have allowed it to consistently generate GAAP operating margins in excess of 35% (and adjusted operating margins exceeding 40%), which is one of the highest levels among the more traditional US-based traditional asset managers we cover—and unique for a firm of its size and scale.

Another key differentiator for BlackRock has been its commitment to risk management, product innovation, and advice-driven solutions. Having been principally focused on institutional investors for much of its existence, BlackRock has been concerned not only with investment performance but with the risks taken to generate those results, as most of its institutional clients come to the table with required levels of performance and volatility in their investment mandates. As such, the company has developed tools—embedded in its Aladdin enterprise system—to assess both security- and portfolio-level risks, which it not only uses internally but also offers to external clients for a fee. This commitment to technology has also enhanced the firm's ability to roll out new products and to combine existing products to create outcome-based investment offerings.

While these structural attributes have been big pluses for the firm, we believe BlackRock's insistence on one common culture, focused on one common vision, operating on one common platform, has also provided the firm with a leg up over its peers. Although it is easy to dismiss culture as something that cannot be measured, we believe that over the long run asset managers with a single corporate culture dedicated to a common purpose (which is ultimately reflected in the consistency of their investment performance, their rate of organic growth, the focus and importance that is placed on risk management, and the amount of employee turnover they experience) tend to perform better than companies that are operating with less cohesive and/or inconsistent organizations.

Add all of this to BlackRock's diversification by asset class, investment style, and geography, along with a heavier presence in the institutional channel, and it becomes fairly evident why the firm has had far less volatility in its AUM, revenue, and profitability and experienced far less execution risk than its publicly traded peers. We believe the company's ability to offer alpha and beta, fundamental and quantitative, and traditional and alternative investment strategies to its clients provides BlackRock with

BlackRock Inc BLK ★★★ 13 Apr 2026 22:29, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
1,023.65 USD 13 Apr 2026	1,150.00 USD 31 Mar 2026 00:19, UTC	0.89	166.14 USD Bil 14 Apr 2026	Wide	Large Value	High	Exemplary	14 Apr 2026 05:00, UTC

the platform it will need to be a sought-after solutions provider in a period when investors are looking for those attributes in an investment manager. In addition, with much more stable cash flows than most of the other asset managers in our coverage universe, we expect BlackRock to continually invest capital back into its business at a rate that far exceeds the capabilities of its peers.

When looking at environmental, social, and governance risks, business ethics, product governance, and data privacy and security are some of the larger issues for asset managers. BlackRock, in our view, is at a lower risk of experiencing material financial impacts from ESG factors, due to its medium exposure to risks that are inherent to the industry, as well as its own operations, offset by the firm's strong management of its material ESG issues (with the company having experienced only a moderate level of controversies over the years). From a business ethics and product governance perspective, failure to provide reliable and trustworthy services can impact both reputation and financial performance, so asset managers like BlackRock tend to be more careful with how they manage the pricing, performance, and positioning of their products. They also spend a lot of time and capital to safeguard against data breaches, which can cause service disruptions, trigger lawsuits and forensic investigations, incur expenses related to repairing or removing threats from data systems, damage reputations, and shake customer confidence.

Fair Value and Profit Drivers Greggory Warren, CFA, Senior Equity Analyst, 30 Mar 2026

We've decreased our fair value estimate for BlackRock to $1,150 per share from $1,200 to account for revised near-term expectations for AUM, revenue, and profitability since our last update. Our fair value estimate implies a price/earnings multiple of 21.5 and 18.9 times our adjusted earnings estimate for 2026 and 2027, respectively. For some perspective, during the past five (10) years, BlackRock has traded at an average trading multiple of 21.0 (20.1) times trailing earnings on an adjusted basis, with the highest (lowest) multiple being 24.9 (14.1) times. We use a 21% US statutory corporate tax rate and a 9% cost of equity in our valuation.

BlackRock ended December 2025 with a record $14.042 trillion in AUM, up 21.6% year over year, and above our estimate of $13.966 trillion. The fourth quarter of 2025 marked the tenth time in the past five years that BlackRock has closed out a calendar quarter with more than $10 trillion in managed assets (the past nine calendar quarters and the fourth quarter of 2021). We expect the firm to have close to $15 trillion in AUM at the end of 2026. Net long-term inflows of $534 billion during 2025 were reflective of an annualized organic AUM growth rate of 5.0%. This was at the upper end of our annual target range of 3%-5% over the long run. That said, we expect the decline in the equity and credit markets since the start of the Iran War to have a negative effect on both flows and AUM levels in the near term.

Even so, our five-year outlook for BlackRock has organic AUM growth expanding 5.1% annually on average during 2026-30, which is just above our target range, driven by slightly better equity flows over

BlackRock Inc BLK ★★★ 13 Apr 2026 22:29, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
1,023.65 USD 13 Apr 2026	1,150.00 USD 31 Mar 2026 00:19, UTC	0.89	166.14 USD Bil 14 Apr 2026	Wide	Large Value	High	Exemplary	14 Apr 2026 05:00, UTC

the long run, as well as a more meaningful uptick in bond fund flows and alternatives fundraising. We should note, though, that as part of our modeling of the US-based asset managers, we tend to build in equity market corrections midway through the first five years, as well as midway through the second five years, of what end up being a 10-year forecast for each firm.

With fee compression expected to be on par with what we've seen at BlackRock during the past five to 10 years, the firm continuing to expand its higher fee-generating alternatives platform, and the company also seeing continued growth from its technology and risk management operations, we are projecting 9.6% top-line growth on average annually during 2026-30 (down from 10.4% previously). We also project more growth and stability in BlackRock's operating profitability than we expect from its peers during the next five years, owing primarily to the scalability of its passively managed ETF operations. We envision the firm generating adjusted operating margins in a 40%-44% range during 2026-30, compared with 43.1% last year and 43.8% on average annually during 2021-25.

We project a bull-case fair value estimate of $1,780 per share and a bear-case valuation of $690 per share. The key factors affecting our scenario analysis include the firm's ability to keep expanding its ETF franchise, as well as the expected change in its overall realization rate as a result of this growth and changes in BlackRock's overall product mix.

Our upside-case fair value estimate of $1,780 per share implies a P/E multiple of 23.4 and 20.5 times our adjusted earnings estimate for 2026 and 2027, respectively. This scenario assumes that efforts to drive growth pay off more than in our base case, with revenue expanding at a double-digit rate annually in most years in our initial five-year forecast. The net result is an 11.6% compound annual growth rate for revenue during 2026-30. This scenario also assumes that the company's ETF platform, which is significantly more scalable than BlackRock's core asset-management business, and its higher fee-generating alternative business, become even larger parts of the company's product mix than we project in our base case, with adjusted operating margins averaging around 45% during our five-year forecast.

Our downside-case fair value estimate of $690 per share implies a P/E multiple of 18.5 and 16.2 times our adjusted earnings estimate for 2026 and 2027, respectively. This scenario assumes BlackRock struggles to generate organic AUM growth with both its active and passive offerings and sees less of a contribution for its other growth efforts, with revenue growth affected by less robust AUM levels and declining fees for most of its product offerings. With the firm more dependent on market gains for AUM growth, the net result is a 7.2% CAGR for revenue during 2026-30. We also assume BlackRock's adjusted operating margins drop below 40% and stay there over the course of our five-year forecast period, despite the increased size and scale of the firm's operations.

MORNINGSTAR®

BlackRock Inc BLK ★★★ 13 Apr 2026 22:29, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
1,023.65 USD 13 Apr 2026	1,150.00 USD 31 Mar 2026 00:19, UTC	0.89	166.14 USD Bil 14 Apr 2026	Wide	Large Value	High	Exemplary	14 Apr 2026 05:00, UTC

Our Morningstar Uncertainty Rating for BlackRock is High. We do not believe that any of the firm's environmental, social, or governance issues are currently material enough to affect our uncertainty rating or fair value estimate. BlackRock has staked its future on its ability to manage and sell passive and active investment strategies. With more than 80% of annual revenue derived from management fees levied on its AUM, dramatic market movements or changes in fund flows can have a significant impact on operating income and cash flows.

BlackRock's investment advisory and administration fees consist primarily of fees that are based on a percentage of the value of managed assets, and performance fees expressed as a percentage of the returns realized on AUM. Movements in equity market prices, interest rates/credit spreads, foreign exchange rates or all three could cause the value of the firm's managed assets to decline, which would result in lower investment advisory and administration fees, impacting operating income and cash flows.

Shifts among asset classes can be problematic, with fees for actively managed fixed-income and money market funds lower than those for equity and balanced strategies, and shifts from active to passive strategies can have an impact as well, with management fees much lower for index funds and ETFs. That said, we believe that the company is at a lower risk of experiencing material financial impacts from ESG factors, due to its moderate exposure to industry-specific and operational risks, offset by the firm's solid management of its material ESG issues.

Capital Allocation Greggory Warren, CFA, Senior Equity Analyst, 22 Jan 2026

Our Morningstar Capital Allocation Rating for BlackRock is Exemplary. This rating assesses management efficacy in three key areas: balance sheet health, investment efficacy, and shareholder distributions. Given that a firm's financial health directly affects its ability to invest in future growth opportunities, return cash to shareholders, or even remain a going concern, it is important to pay attention to its balance sheet strength. Asset managers have a high degree of revenue cyclicality and operating leverage (with results tending to be impacted by the vagaries of the equity and credit markets) and are generally asset-light. As such, they should not maintain more than low to moderate levels of financial leverage.

BlackRock has traditionally maintained a sound balance sheet, highlighted by $10.0 billion in unencumbered cash and equivalents, $10.7 billion in unencumbered investments, and $12.9 billion in long-dated debt (on a principal basis) at the end of September 2025, with extremely low debt/total capital and debt/EBITDA levels historically. We expect net debt/adjusted EBITDA (as well as net debt/enterprise value) to remain low and note that just 11% of the firm's total debt outstanding at the end of 2025 was due during the next three years.

BlackRock's long-term strategy has been focused on investing in viable growth initiatives, maintaining financial strength and flexibility, returning a substantial portion of earnings to shareholders as share

MORNINGSTAR®

BlackRock Inc BLK ★★★ 13 Apr 2026 22:29, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
1,023.65 USD 13 Apr 2026	1,150.00 USD 31 Mar 2026 00:19, UTC	0.89	166.14 USD Bil 14 Apr 2026	Wide	Large Value	High	Exemplary	14 Apr 2026 05:00, UTC

repurchases and dividends, and (when it makes sense) acquiring businesses that fill product or distribution holes. In our view, better cultures and internal investment processes tend to lead to better and more consistent investment performance and organic growth, as well as relatively little employee turnover.

When growth is harder to come by, which has become the case for most of the US-based traditional asset managers, we expect firms like BlackRock to take a variety of actions, including overhauling their leadership or investment processes, buying a competitor with better performance or greater product, channel, or geographic diversity, or branching out into less-exposed strategies. We look positively on asset managers whose actions enhance their economic moats and have the capital and wherewithal to maintain their leadership positions. We are more skeptical about firms that are continuously repairing deficiencies in their structures or lack the capital and wherewithal to defend their businesses longer term.

In BlackRock's case, we think the company has done an exceptional job of not only defending its economic moat but in investing for the future. In an industry where acquisitions have not always worked, the firm has overseen two major deals and a spattering of bolt-on acquisitions, which not only added to BlackRock's product lineup but expanded its footprint into other channels and markets. A major reason BlackRock has had success with acquisitions where so many others have failed is that management has always insisted on one culture for the firm, which has been reflected in the level and consistency of the company's investment performance, its rate of organic growth, its focus on risk management, and level of employee turnover.

BlackRock has tended to return capital to shareholders as share repurchases and dividends. During the past 10 calendar years, the firm repurchased (net of share issuances) $17.4 billion of its stock and paid out $24.6 billion as dividends. We have the company generating close to $10.0 billion in free cash flow on average annually during 2026-30, much of which we expect to be returned to shareholders as dividends (40%) and share repurchases (20%), with some set aside for acquisitions (15%). BlackRock has committed to repurchase $450 million of its common stock per quarter during 2026 but would increase its allocation if the firm's shares were trading at a significant discount to intrinsic value. We also have the firm's annual dividend payout ratio (based on our forward earnings estimates) averaging 40% over the next five years.

Larry Fink has been chair and CEO of BlackRock since the firm went public in 1999, having run the entities that would eventually become BlackRock since 1988. Much of the company's success can be attributed to Fink's conviction that the firm must act as a responsible, high-performing fiduciary, and use BlackRock's ever-increasing scale and technological capabilities to deliver value to investors by providing appropriate investments at reasonable prices. As a result, the firm has not only expanded its internal operations but successfully augmented existing product offerings and services through acquisitions. From a succession planning perspective, Fink, who turned 73 in November 2025, has noted

Analyst Notes Archive

BlackRock Earnings: Market Gains and Inflows Drive AUM and Revenue to Record Highs Greggory Warren, CFA,Senior Equity Analyst,14 Oct 2025

BlackRock ended September with a record $13.464 trillion in managed assets, up 17.3% year over year and above our estimate of $13.054 trillion. The company continues to benefit from flows into its passive offerings as well as ongoing market gains.Why it matters: BlackRock continues to outdo its traditional asset management peers from the perspective of organic growth in assets under management, as its mix of index funds and exchange-traded funds continues to appeal more to investors than most active products. The expansion of the company's private capital platform has only added to its ability to stay ahead of the group. Net long-term inflows of $171 billion represented an annualized organic AUM growth rate of 5.9% for the third quarter, above our annual target rate range of 3%-5%. We expect to see lower rates of growth from peers when they report.The bottom line: While we had expected the back half of the year to pose more headwinds for flows and market gains as the impacts of the US government's fiscal, tariff, and immigration policies became more apparent, BlackRock continues to benefit from ongoing market gains. While there was little in wide-moat-rated BlackRock's third-quarter results that would alter our long-term view of the company, we expect to increase our $1,100 fair value estimate to $1,170 as we adjust the baseline for AUM in our valuation model.

BlackRock Earnings: Solid AUM and Revenue Growth Offset by Modest Margin Compression Greggory Warren, CFA,Senior Equity Analyst,15 Jul 2025

BlackRock ended June 2025 with a record $12.528 trillion in managed assets, up 17.7% year over year. Second-quarter revenue increased 12.9% year over year on higher average AUM and slightly higher fee rates. Adjusted operating margins declined 80 basis points year over year to 43.3%.Why it matters: BlackRock continues to outdo its traditional asset management peers from an organic assets under management growth perspective, as its mix of passive products—index funds and ETFs—continue to appeal more to investors than most active products. Its private capital platform expansion will only add to its ability to stay ahead of the group. Net long-term inflows of $46 billion represented an annualized organic AUM growth rate of 1.7% for the June quarter, below our annual target of 3%-5% but reflective of the ongoing market uncertainty. We expect to see lower growth rates from its peers. The iShares platform remains the biggest driver of flows for BlackRock, with the firm picking up $85 billion in net long-term inflows—equivalent to an 8.8% annualized organic AUM growth rate—from its ETF business during the second quarter.The bottom line: While BlackRock benefited from second-quarter market

MORNINGSTAR®

BlackRock Inc BLK ★★★ 13 Apr 2026 22:29, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
1,023.65 USD 13 Apr 2026	1,150.00 USD 31 Mar 2026 00:19, UTC	0.89	166.14 USD Bil 14 Apr 2026	Wide	Large Value	High	Exemplary	14 Apr 2026 05:00, UTC

gains and favorable currency exchange, we expect the back half of the year to pose more headwinds as the impacts of the US government's fiscal, tariff, and immigration policies become more apparent. There was little in BlackRock's second-quarter results that would alter our long-term view. It continues to trade at a hefty premium relative to the price/earnings multiples of the other US-based traditional asset managers (which we think is warranted). Shares are fairly valued relative to our $1,050 per share fair value estimate. We expect to stick with our more conservative near-term assumptions for BlackRock and the rest of the US-based asset managers.(July 16, 2025): This note has been updated to correct the fair value estimate figure to $1,050 from $1,100.

BlackRock: ElmTree Funds Deal Expands Private Market Capabilities; No Change to Fair Value Estimate Greggory Warren, CFA,Senior Equity Analyst,7 Jul 2025

BlackRock announced on July 7 that it will acquire ElmTree Funds, a net-lease real estate investment firm with $7.3 billion in total managed assets at the end of March, with the aim of expanding its footprint in private markets.Why it matters: BlackRock is betting that growth of its private market platform will not only boost revenue but lift its market value over the next five-plus years, as it positions itself to be a one-stop shop for both public and private assets. We have believed for years that if BlackRock were serious about catching up to Blackstone on the private capital side of the market, it would need to buy more than build in the near to medium term, given the gap between it and the market leader. The bottom line: While BlackRock is the best operator of the US-based traditional asset managers we cover, the shares already reflect its strength relative to its peers. We've left our $1,050 fair value estimate for BlackRock in place, given the relatively small size of the ElmTree deal. Our valuation is built on somewhat more conservative near-term assumptions for the US-based asset managers, given the uncertainties created by US fiscal and tariff policies, and slightly better medium-term forecasts for the company's exchange-traded fund, active management, alternatives, and technology services businesses.

BlackRock: 2030 Revenue and Operating Income Goals Are Achievable; No Change to Fair Value Estimate Greggory Warren, CFA,Senior Equity Analyst,23 Jun 2025

BlackRock laid out targets for 2030 at its 2025 investor day, including $35 billion in revenue and $15 billion in operating income. Management believes this should translate into a doubling of the firm's market capitalization to $280 billion.Why it matters: BlackRock is betting that the growth of its private market platform will not only boost revenue but lift its market value over the next five-plus years, as it positions itself to be a one-stop shop for both public and private assets. BlackRock aims to expand its annual revenue to $35 billion in 2030 from $20.4 billion last year, reflective of a 9.4% compound annual growth rate for 2025-30.The bottom line: BlackRock is the best operator of the US-based traditional asset managers that we cover, and these goals are likely achievable, as they are not too far from our own projections. However, the shares already reflect the firm's strength relative to the weaknesses of its

peers. We've left our $1,050 fair value estimate for BlackRock in place. Our valuation is built on somewhat more conservative near-term assumptions for the US-based asset managers, given the uncertainties created by US fiscal and tariff policies, and slightly better medium-term forecasts for the company's exchange-traded fun, active management, alternatives, and technology services businesses.

BlackRock Earnings: Solid Flows and Currency Gains Offset Somewhat by Market Losses Greggory Warren, CFA,Senior Equity Analyst,11 Apr 2025

BlackRock ended March 2025 with a record $11.584 trillion in assets under management, or AUM, up 0.3% sequentially and 10.6% year over year. First-quarter revenue increased 11.6% year over year on higher average AUM and fee rates, with adjusted operating margins improving from 42.2% to 43.2%.Why it matters: BlackRock continues to outstrip its peers from an organic AUM growth perspective, as its mix of passive products—index funds and ETFs—continue to appeal more to investors than most active product offerings. This allows the firm to better navigate market headwinds when they emerge, as they did during the first quarter. Net long-term inflows of $83 billion represented an annualized organic AUM growth rate of 3.1% for the first quarter, at the lower end of our annual target of 3%-5% but still better than what we are expecting from peers. The bottom line: While BlackRock's level of managed assets remains well above end of 2021 levels (just before the Federal Reserve started raising rates and the equity and credit markets tanked), in contrast with most of its peers, we expect the market selloff since the start of April to impact full-year results. There was little in wide-moat-rated BlackRock's first-quarter results that would alter our long-term view of the firm. The company continues to trade at a hefty premium relative to the price/earnings multiples of the other US-based traditional asset managers (which we think is warranted).

US-Based Traditional Asset Managers: Tariff-Induced Market Uncertainty Drives Shares Lower Greggory Warren, CFA,Senior Equity Analyst,3 Apr 2025

Share prices of US-based traditional asset managers like BlackRock and T. Rowe Price are down more than 6% on average on April 3 as the markets react negatively to the Trump administration's global tariffs. While this has made some of the names we cover more approachable, we remain cautious.Why it matters: With short-term rate cuts likely on pause in the near term and the equity markets baking in an economic slowdown—if not recession—due to tariffs as well as cuts to US government spending and jobs, the US equity markets are already down more than 6% year to date. The US-based traditional asset managers we cover not only are tethered to the performance of the equity markets but also have an average beta of 1.3 times. The group is down 13% on average since the start of the year, similar to the 15% decline for the Dow Jones U.S. Asset Managers index. The bottom line: At midday April 3, the traditional asset managers we cover were trading at an average price/fair value multiple of 0.84, making them modestly undervalued. But we'd still prefer to see a slightly wider margin of safety before recommending some of the higher-quality names. Wide-moat BlackRock remains our top pick for long-

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
1,023.65 USD 13 Apr 2026	1,150.00 USD 31 Mar 2026 00:19, UTC	0.89	166.14 USD Bil 14 Apr 2026	Wide	Large Value	High	Exemplary	 14 Apr 2026 05:00, UTC

ESG Risk Rating Breakdown

Exposure	
Company Exposure[1]	37.7
– Manageable Risk	36.1
Unmanageable Risk[2]	**1.7**
Management	
Manageable Risk	36.1
– Managed Risk[3]	22.6
Management Gap[4]	**13.4**
Overall Unmanaged Risk	**15.1**

- Exposure represents a company's vulnerability to ESG risks driven by their business model
- Exposure is assessed at the Subindustry level and then specified at the company level
- Scoring ranges from 0-55+ with categories of low, medium, and high-risk exposure

- Management measures a company's ability to manage ESG risks through its commitments and actions
- Management assesses a company's efficiency on ESG programs, practices, and policies
- Management score ranges from 0-100% showing how much manageable risk a company is managing

ESG Risk Rating

ESG Risk Ratings measure the degree to which a company's value is impacted by environmental, social, and governance risks, by evaluating the company's ability to manage the ESG risks it faces.

1. A company's Exposure to material ESG issues 2. Unmanageable Risk refers to risks that are inherent to a particular business model that cannot be managed by programs or initiatives 3. Managed Risk = Manageable Risk multiplied by a Management score of 62.7% 4. Management Gap assesses risks that are not managed, but are considered manageable 5. ESG Risk Rating Assessment = Overall Unmanaged Risk = Management Gap plus Unmanageable Risk

ESG Risk Rating Assessment[5]

ESG Risk Rating is of Apr 14, 2026. Highest Controversy Level is as of Apr 08, 2026. Sustainalytics Subindustry: Asset Management and Custody Services. Sustainalytics provides Morningstar with company ESG ratings and metrics on a monthly basis and as such, the ratings in Morningstar may not necessarily reflect current Sustainalytics' scores for the company. For the most up to date rating and more information, please visit: sustainalytics.com/esg-ratings/.

Peer Analysis 14 Apr 2026

Peers are selected from the company's Sustainalytics-defined Subindustry and are displayed based on the closest market cap values

MORNINGSTAR®

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, indepth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss shortterm market-price movements), but we believe these negatives are mitigated by deep analysis and our longterm approach.

Morningstar's equity research group ("we," "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our singlepoint star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

When considering a company's moat, we also assess whether there is a substantial threat of value destruction, stemming from risks related to ESG, industry disruption, financial health, or other idiosyncratic issues. In this context, a risk is considered potentially value destructive if its occurrence would eliminate a firm's economic profit on a cumulative or midcycle basis. If we deem the probability of occurrence sufficiently high, we would not characterize the company as possessing an economic moat.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in workingcapital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

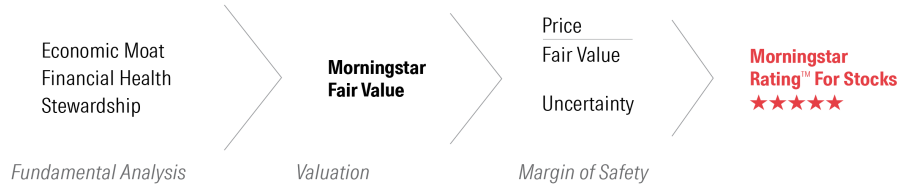

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total present value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty Around That Fair Value Estimate

Morningstar's Uncertainty Rating is designed to capture the range of potential outcomes for a company's intrinsic value. This rating is used to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating is aimed at identifying the confidence we should have in assigning a fair value estimate for a given stock.

Our Uncertainty Rating is meant to take into account anything that can increase the potential dispersion of future

MORNINGSTAR®

Research Methodology for Valuing Companies

outcomes for the intrinsic value of a company, and anything that can affect our ability to accurately predict these outcomes. The rating begins with a suggested rating produced by a quantitative process based on the trailing 12-month standard deviation of daily stock returns. An analyst overlay is then applied, with analysts using the suggested rating, historical rating data, and their own knowledge of the company to inform them as they make the final Uncertainty Rating decision. Ultimately, the rating decision rests with the analyst. Analysts take into account many characteristics when making their final decision, including cyclical factors, operational and financial factors such as leverage, company-specific events, ESG risks, and anything else that might increase the potential dispersion of future outcomes and our ability to estimate those outcomes.

Our recommended margin of safety—the discount to fair value demanded before we'd recommend buying or selling the stock—widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the potential dispersion of outcomes, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the Uncertainty Rating provides guidance in portfolio construction based on risk tolerance.

Our Uncertainty Ratings are: Low, Medium, High, Very High, and Extreme.

	Margin of Safety	
Qualitative Analysis Uncertainty Ratings	★★★★★Rating	★Rating
Low	20% Discount	25% Premium
Medium	30% Discount	35% Premium
High	40% Discount	55% Premium
Very High	50% Discount	75% Premium
Extreme	75% Discount	300% Premium

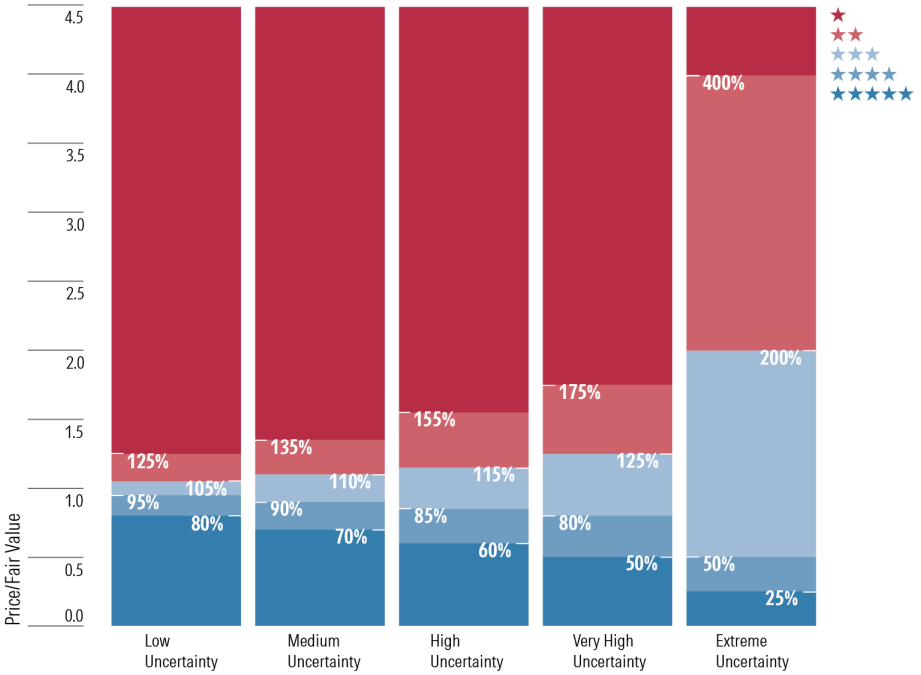

Our uncertainty rating is based on the interquartile range, or the middle 50% of potential outcomes, covering the 25th percentile–75th percentile. This means that when a stock hits 5 stars, we expect there is a 75% chance that the intrinsic value of that stock lies above the current market price. Similarly, when a stock hits 1 star, we expect there is a 75% chance that the intrinsic value of that stock lies below the current market price.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more details about our methodology, please go to https://shareholders.morningstar.com

Morningstar Equity Research Star Rating Methodology

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

★★★★★ We believe appreciation beyond a fair risk adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

★★★★ We believe appreciation beyond a fair risk-adjusted return is likely.

★★★ Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

★★ We believe investors are likely to receive a less than fair risk-adjusted return.

★ Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments,

MORNINGSTAR®

Research Methodology for Valuing Companies

and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments, and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Sustainalytics ESG Risk Rating Assessment: The ESG Risk Rating Assessment is provided by Sustainalytics; a Morningstar company.

Sustainalytics' ESG Risk Ratings measure the degree to which company's economic value at risk is driven by environment, social and governance (ESG) factors.

Sustainalytics analyzes over 1,300 data points to assess a company's exposure to and management of ESG risks. In other words, ESG Risk Ratings measures a company's unmanaged ESG Risks represented as a quantitative score. Unmanaged Risk is measured on an open-ended scale starting at zero (no risk) with lower scores representing less unmanaged risk and, for 95% of cases, the unmanaged ESG Risk score is below 50.

Based on their quantitative scores, companies are grouped into one of five Risk Categories (negligible, low, medium, high, severe). These risk categories are absolute, meaning that a 'high risk' assessment reflects a comparable degree of unmanaged ESG risk across all subindustries covered.

The ESG Risk Rating Assessment is a visual representation of Sustainalytics ESG Risk Categories on a 1 to 5 scale. Companies with Negligible Risk = 5 Globes, Low Risk = 4, Medium Risk = 3 Globes, High Risk = 2 Globes, Severe Risk = 1 Globe. For more information, please visit sustainalytics.com/esg-ratings/

Ratings should not be used as the sole basis in evaluating a company or security. Ratings involve unknown risks and uncertainties which may cause our expectations not to occur or to differ significantly from what was expected and should not be considered an offer or solicitation to buy or sell a security.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based. by local and/or regional regulatory bodies, including laws in connection with the distribution third-party research reports.

Conflicts of Interest

- No interests are held by the analyst with respect to the security subject of this investment research report.
- Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com
- Analysts' compensation is derived from Morningstar, Inc.'s overall earnings and consists of salary, bonus and in some cases restricted stock.
- Neither Morningstar, Inc. or the Equity Research Group receives commissions for providing research nor do they charge companies to be rated.
- Morningstar's overall earnings are generated in part by the activities of the Investment Management and Research groups, and other affiliates, who provide services to product issuers.
- Morningstar employees may not pursue business and employment opportunities outside Morningstar within the investment industry (including but not limited to, working as a financial planner, an investment professional or investment professional representative, a broker-dealer or broker-dealer agent, a financial writer, reporter, or analyst) without the approval of Morningstar's Legal and if applicable, Compliance teams.
- Neither Morningstar, Inc. or the Equity Research Group is a market maker or a liquidity provider of the security noted within this report.
- Neither Morningstar, Inc. or the Equity Research Group has been a lead manager or co-lead manager over the previous 12-months of any publicly disclosed offer of financial instruments of the issuer.
- Morningstar, Inc.'s investment management group does have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them.
- Morningstar, Inc. is a publicly traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section https://shareholders.morningstar.com/investor-relations/financials/sec-filings/default.aspx
- Morningstar, Inc. may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar, Inc.'s conflict of interest policies is available from http://global.morningstar.com/equitydisclosures. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

Risk Warning Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security's investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions.

Neither Ibbotson Associates Japan, Inc., nor its representatives, are acting or will be deemed to be acting as an investment professional to any recipients of this information.

For recipients in Singapore: The Report is intended for Institutional Investor audiences and is distributed by Morningstar Investment Adviser Singapore Pte. Limited, which is licensed by the Monetary Authority of Singapore to provide financial advisory services in Singapore. Morningstar Investment Adviser Singapore Pte. Limited is the entity responsible for the creation and distribution of the research services described in this Report.

This content is provided for informational purposes only and may be shared or redistributed by Institutional Investors to their clients or other permitted persons, subject to obtaining the appropriate licence from Morningstar. Redistribution of this content is subject to any applicable conditions or limitations, including those agreed commercially or contractually with Morningstar. The person who shares or redistributes this content shall be solely responsible for compliance with all relevant legal and regulatory obligations in the jurisdictions in which the material is made available.

Investors should consult a financial adviser regarding the suitability of any investment product, taking into account their specific investment objectives, financial situation or particular needs, before making any investment decision.

Morningstar, Inc., and its affiliates rely on certain exemptions (Financial Advisers Regulations, Section 27(1)(e), Section 32B and 32C) to provide its investment research to recipients in Singapore.

For recipients in Korea: The report is distributed by Morningstar Korea Ltd., which has filed to the Financial Services Committee, for informational purposes only. Neither Morningstar Korea Ltd. nor its representatives are acting or will be deemed to be acting as an investment advisor to any recipients of this information.
