Blackstone: Lowering Fair Value Estimate Slightly to $140 From $145; Shares Modestly Undervalued

Analyst Note Greggory Warren, CFA, Senior Equity Analyst, 13 May 2026

While Blackstone continues to generate positive flows, with its mix of alternative products benefiting from the ongoing demand for nontraditional investment products, we see some near- to medium-term headwinds from turmoil in the private credit markets.

Why it matters: Alternative asset managers rely on their reputation, product offerings, and investment track record not only to raise capital but also to maintain their standing as go-to firms for institutional and high-net-worth investors seeking exposure to the private markets.

- Managers with alternative credit offerings, like Blackstone, were hit hard earlier this year by turmoil in the private credit markets, brought on by Blue Owl's handling of some of its private credit funds, as well as concerns that artificial intelligence will disrupt software firms, a key area of direct lending for a lot of private credit funds.
- These issues raised concerns about liquidity for these types of funds, especially given the riskiness of their direct lending portfolios, which we expect to affect fundraising efforts, as well as increase redemption requests, in the near to medium term.
- While the shares of most firms have recovered in response to solid first-quarter results from the alternative asset managers, including Blue Owl, we don't believe that the storm has passed, with issues in the private credit markets expected to linger for some time.

Business Description

Blackstone is the world's largest alternative-asset manager with $1.304 trillion in total assets under management, including $937.6 billion in fee-earning assets under management, at the end of March 2026. The company operates with scale in each of its major product lines: private equity (27% of fee-earning AUM and 34% of base management fees), real estate/real assets (30% and 33%), credit and insurance (33% and 26%), and other alternatives (10% and 7%). While the firm primarily serves institutional investors (84% of AUM), it also caters to clients in the high-net-worth channel (16%). Blackstone operates through 25 offices in the Americas (8), Europe and the Middle East (9), and the Asia-Pacific region (8).

The bottom line: Following the reporting of solid first-quarter results, we slightly lowered our fair value estimate for wide-moat-rated Blackstone to $140 per share from $145 as we adjusted our forward forecasts for each of the firm's product lines.

- Even with the valuation change, Blackstone's shares remain modestly undervalued relative to our fair value estimate.
- Our forecast for 2026 and 2027 distributable EPS of $5.99 and $7.40, respectively, is based on our expectations for distributable earnings of $7.4 billion and $9.1 billion during those years.

Business Strategy & Outlook Greggory Warren, CFA, Senior Equity Analyst, 13 May 2026

We consider Blackstone to be the preeminent alternative-asset manager, with $1.304 trillion in total assets under management, including $937.6 billion in fee-earning assets under management, at the end of March 2026. The company operates with scale in each of its major product lines: private equity (27% of fee-earning AUM and 34% of base management fees), real estate/real assets (30% and 33%), credit and insurance (33% and 26%), and other alternatives (10% and 7%). Blackstone has also built a large base of in-house executives, consultants, and advisors who have decades of industry experience and can revitalize a company or property through cost-cutting, acquisitions, or other strategic maneuvers.

With the alternatives industry so heavily weighted toward private equity (55% of industry fee-earning AUM), and a lot of firms being US-centric, we've generally held Blackstone up as the prime example of what we'd like to see from a product diversification perspective, even if it could do a bit more, in our view, to expand its non-US operations. More importantly, Blackstone's diversified revenue streams (based on its fee-earning AUM and geographic reach) have kept its base management fee revenue and fee-related earnings fairly stable as they have expanded over the years. On top of that, the company is currently earning 50%-100% more in fee-related revenue and earnings than each of its three largest peers: Brookfield Asset Management, Apollo Global Management, and KKR.

With customer demand for alternatives expected to stay elevated and investors in alternative assets looking to limit the number of providers they use, large-scale players like Blackstone are advantaged in fundraising as well as deployments and realizations. However, we believe the negative perception currently attached to the private credit market, brought on by peer Blue Owl's handling of some of its private credit funds, has raised concerns about liquidity for these types of funds, especially given the riskiness of their direct lending portfolios. This is likely to be a drag on results in the near to medium term.

Bulls Say Greggory Warren, CFA, Senior Equity Analyst, 13 May 2026

- Blackstone, with $937.6 billion in fee-earning AUM at the end of the first quarter of 2026, is a go-to firm for institutional and high-net-worth investors looking for exposure to alternatives.

- Blackstone's ever-increasing scale, diversified product offerings, solid investment performance, and strong client relationships position the firm to perform well in a variety of market conditions.
- Less than 15% of Blackstone's fee-earning AUM comes from bigger-risk areas like direct lending and opportunistic credit in the private credit market.

Bears Say Greggory Warren, CFA, Senior Equity Analyst, 13 May 2026

- Downturns in the equity and credit markets could leave investors in Blackstone's funds with limited liquidity and large commitments to funds, making it more difficult for the firm to raise new capital.
- Private equity and real estate are highly cyclical and heavily reliant on market-timing and investment exits to generate incentive income.
- Competition for new investor capital is likely to increase as more traditional asset managers like BlackRock increase their exposure to alternatives and are willing to be more fungible on fees.

Blackstone Inc BX ★★★★ 19 May 2026 21:31, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
117.04 USD 18 May 2026	140.00 USD 13 May 2026 21:15, UTC	0.82	139.57 USD Bil 19 May 2026	Wide	Large Blend	High	Standard	16 May 2026 05:00, UTC

Economic Moat Greggory Warren, CFA, Senior Equity Analyst, 13 May 2026

We believe the asset management business can be conducive to the development of economic moats. Unlike traditional asset managers like BlackRock, T. Rowe Price, and Franklin Resources, which focus more on traditional asset classes like equity, fixed-income, balanced, and money market funds, alternative-asset managers like Blackstone deal with less-liquid alternative investments like private equity, credit alternatives, real estate, and hedge funds.

Even so, we think traditional and alternative-asset managers both benefit from switching costs (the core moat source) and intangible assets, which include organizational attributes—such as product mix, distribution channel strength, and geographic reach—and true intangibles—like strong and respected brands and manager reputations derived from successful records of investment performance—that can explain why an asset manager varies from the switching cost advantage inherent in the industry.

Blackstone has, in our view, built a superior position in the industry, utilizing its reputation, broad product portfolio, investment performance record, and a cadre of dedicated professionals to raise massive amounts of capital and maintain the reputation it has built for itself as a go-to firm for institutional and high-net-worth investors looking for exposure to alternative assets. During the past five (10) years, Blackstone has produced adjusted returns on invested capital that have been 1,500 (1,300) basis points above our estimated cost of capital for the company.

We expect the firm to maintain its excess returns at around these levels over the next 5-10 years, given the amount of interest that still exists for alternatives and the potential for the retail market, a large untapped market for alternative assets, to open up gradually to the alternative-asset managers. While we see more potential headwinds than tailwinds during years 10-20, as rising concerns over the private credit markets, increased competition from peers (including some of the more traditional asset managers), continued pressure on fees, and a general maturing of the industry (from what has been a solid period of above-average growth in the face of shifting investor demand for alternatives) ultimately weigh on results, we expect the firm to continue to outearn our cost of capital.

Unlike the more-traditional asset managers, which have had to rely on investor inaction (driven by either good fund performance or investor inertia/uncertainty) to keep annual redemption rates low (generally 20%-30% for long-term AUM), the products offered by alternative-asset managers tend to have lockup periods that prevent investors from redeeming part or all of their investment for a prolonged period. Generally, we favor longer lockup periods, which offer up more substantial switching costs than those enjoyed by the traditional asset managers, with private equity, venture capital, and real estate/real asset funds tending to have the longest lockup periods of 7-12 years.

As for private credit funds, closed-end funds have lockup periods in a 5- to 8-year range, while

Blackstone Inc BX ★★★★ 19 May 2026 21:31, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
117.04 USD 18 May 2026	140.00 USD 13 May 2026 21:15, UTC	0.82	139.57 USD Bil 19 May 2026	Wide	Large Blend	High	Standard	16 May 2026 05:00, UTC

evergreen funds (aka open-end funds) can be structured to offer more liquidity given that they have no fixed end date. These types of arrangements have allowed Blackstone to post an annual retention rate of 94% (93%) on average annually for the past five (10) years, even with about one-third of its total and fee-earning AUM tied up in products that are redeemable on a quarterly basis.

We believe the alternative-asset managers, much like traditional asset managers, can improve on the switching cost advantage inherent in their business with organizational attributes (such as product mix, distribution and geographic reach) and intangible assets (such as strong and respected brands and manager reputations derived from successful, maintainable records of investment performance) and provide them with a degree of differentiation from their peers.

While the barriers to entry are not all that significant for the industry, the barriers to success are extremely high as it not only takes time and skill to put together a long enough record of investment performance to start gathering assets but even more time to build the scale necessary to be competitive (exemplified by the fact that BlackRock is the only legitimate traditional asset manager of size competing in this part of the market despite the fact that most of our coverage has been focused on building out alternative-asset manager offerings during much of the past decade).

This scenario has given larger, more established asset managers an advantage over the smaller providers, especially when it comes to gaining cost-effective access to distribution platforms as well as handling many of the operational improvements now required to drive value creation in private equity and real estate portfolios.

The publicly traded alternative-asset managers are global institutions with decades of experience investing in nontraditional asset classes, primarily by managing money for private and public pension funds, endowments, foundations, and other institutions, as well as for high-net-worth individuals that qualify as "sophisticated investors" (those with sufficient capital, experience and net worth to engage in these less liquid investment opportunities that generally require high minimum investments on the part of investors).

Most of the industry's largest players started off in private equity but have expanded their reach over time to include credit, real estate, hedge funds, and funds of hedge funds. Being more broadly diversified and having a solid investment performance record has enhanced Blackstone's switching cost advantage, in our view.

Blackstone, which we believe has a wide economic moat, has gone from being a pioneer in the alternative-asset management industry more than three decades ago to the largest stand-alone alternative-asset manager in the world at the end of March 2026, with $1.304 trillion in total AUM, including $937.6 billion in fee-earning AUM. Blackstone operates with scale in each of its major product lines—private equity (with $429.9 billion in total AUM and $255.8 billion in fee-earning AUM), real

Blackstone Inc BX ★★★★ 19 May 2026 21:31, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
117.04 USD 18 May 2026	140.00 USD 13 May 2026 21:15, UTC	0.82	139.57 USD Bil 19 May 2026	Wide	Large Blend	High	Standard	16 May 2026 05:00, UTC

estate/real assets ($315.3 billion/$277.5 billion), private credit and insurance ($457.5 billion/$313.3 billion), and multi-asset investing ($101.4 billion/$91.0 billion)—and distribution channel—institutional (84% of total AUM) and high-net-worth (16%)—where it competes, with a global reach that includes 25 offices in the Americas, Europe/Middle East, and the Asia-Pacific region.

Blackstone has also built out a large base of employees—including in-house executives, consultants, and advisors—that have decades of industry experience and can revitalize a company through cost-cutting, acquisitions, or other strategic maneuvers, increasing the chance of producing a successful investment. All these attributes have provided Blackstone with the ability to not only gather assets but a means of differentiating itself from peers.

During the past five years, an overwhelming majority of the capital invested in alternative assets was held in private equity/venture capital funds (58% of industry capital on average), with the remainder held in credit strategies (13%), real estate/real asset (17%), and other alternatives (12%) offerings. Blackstone, in our view, continues to use its scale and diversification across alternative asset classes to raise more capital than its peers, aided by the access it has to the more than 1,000 institutional investors that are already invested in its funds.

The company was the largest fundraiser among stand-alone publicly traded alternative-asset managers during the past decade, pulling in $1.564 trillion with its private equity ($376.0 billion), credit and insurance ($657.8 billion), real estate/real asset ($414.8 billion), and other alternative ($115.3 billion) offerings during 2016-25. Blackstone accounted for around 20% (18%) of the industry's private debt segment fundraising during the past five (10) years, 20% (14%) of new commitments for real estate/real asset funds, 5% (4%) of the capital being raised for private equity/venture capital funds, and 6% (7%) of fundraising in the other alternatives category.

Overall, Blackstone accounted for around 11% (10%) of total new commitments to alternative products during 2021-25 (2016-25). On top of that, looking back over the past decade, Blackstone has raised nearly as much capital as its two largest stand-alone competitors—Brookfield and Apollo—combined. The firm also raised nearly as much as the next three largest stand-alone peers—KKR, Ares, and Carlyle Group—when looked at on a combined basis during the same period(s).

Competition for investor capital can be stiff and has traditionally centered on manager reputation, fund size, and investment performance. In a sign that fundraising competition has intensified in the past 15 years, there was a five-year period following the 2008-09 financial crisis where Blackstone raised more capital than its next four largest peers—Apollo Group, KKR, Ares, and Carlyle Group—combined (compared with its two largest stand-alone competitors in the past five years). We expect competition for new investor capital will only increase, especially with more-traditional asset managers like BlackRock increasing their exposure to alternatives and showing a willingness to be fungible on fees,

MORNINGSTAR®

Blackstone Inc BX ★★★★ 19 May 2026 21:31, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
117.04 USD 18 May 2026	140.00 USD 13 May 2026 21:15, UTC	0.82	139.57 USD Bil 19 May 2026	Wide	Large Blend	High	Standard	16 May 2026 05:00, UTC

given that management and performance fees in this part of the market are significantly higher than what most traditional asset managers earn with their core product offerings.

Fair Value and Profit Drivers Greggory Warren, CFA, Senior Equity Analyst, 13 May 2026

We've lowered our fair value estimate for Blackstone slightly to $140 per share from $145 to account for revised near-term expectations for AUM, revenue, and profitability. Our new fair value estimate implies a price/earnings multiple of 23.4 and 18.9 times our 2026 and 2027 estimates for distributable earnings per share, respectively. For some perspective, during the past five (10) years, the shares have traded at an average of 27.3 (22.2) times trailing earnings on an adjusted basis, with the highest (lowest) multiple the past decade being 42.5 (8.5) times. We use a 21% US statutory corporate tax rate and a 9% cost of equity in our valuation.

Consistent with other alternative-asset managers, we view fundraising, deployments, realizations, fee-earning AUM, base management fee levels, realized performance fees, and compensation costs as key drivers of our valuation for Blackstone.

Considering these drivers in sequence, the firm raised $69 billion in the first quarter of 2026, exceeding its quarterly run rate of $51 billion over the previous eight calendar quarters. Even so, we expect Blackstone to raise just $180 billion-$200 billion in new capital annually on average during 2026-30, believing that the headwinds we foresee for the private credit markets have yet to fully affect the industry, noting that we expect Blackstone to be affected less than most of its peers.

As for deployments, the company put $36 billion to work during the first quarter, slightly above its quarterly run rate of $34 billion over the past two years. With future fundraising expected to be hampered by negative perceptions of the private credit markets, we expect deployment activity to be somewhat diminished in the near- to medium term, forecasting Blackstone to put $135 billion-$160 billion to work on average annually during 2026-30.

The firm also booked $36 billion in realizations during the first quarter of 2026, above Blackstone's quarterly run rate of $37 billion over the previous eight calendar quarters. With the equity and credit markets expected to remain more volatile in the near- to medium-term, we expect realizations to be more sporadic, averaging $100 billion-$120 billion annually during 2026-30.

Blackstone ended the first quarter of 2026 with $937.6 billion in fee-earning AUM, up 9.0% year over year, and had total managed assets of $1.304 trillion. We see the firm closing 2026 with $996.1 billion in fee-earning and $1.385 trillion in total AUM, respectively. Over the next four-plus years, we expect Blackstone's fee-earning and total AUM to reach $1.210 trillion and $1.721 trillion, respectively. We expect modest fee compression, with base management fees increasing at a 6.2% CAGR during 2026-30. Realized performance and incentive fees will remain constrained, though total revenue is expected

MORNINGSTAR®

Blackstone Inc BX ★★★★ 19 May 2026 21:31, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
117.04 USD 18 May 2026	140.00 USD 13 May 2026 21:15, UTC	0.82	139.57 USD Bil 19 May 2026	Wide	Large Blend	High	Standard	16 May 2026 05:00, UTC

to increase at a 3.6% CAGR over our five-year forecast period.

Compensation costs averaged 39.3% of revenue during the past five years. We see these expenses averaging 38%-41% of annual revenue during 2026-30. Distributable earnings (which remove the effects of unrealized activity) are likely to average $8 billion-$10 billion annually during our five-year forecast. Our forecast for 2026 and 2027 distributable EPS of $5.99 and $7.40, respectively, is based on our expectations for distributable earnings of $7.4 billion and $9.1 billion during those years.

We project a bull-case fair value estimate of $217 per share and a bear-case valuation of $84 per share. The key factors affecting our scenario analysis include Blackstone's level of fee-earning AUM, its pricing power and realized performance fees, and its ability to continue to raise capital.

Our upside-case fair value estimate of $217 per share implies a P/E multiple of 29.0 and 23.4 for our 2026 and 2027 distributable EPS estimates, respectively. This scenario assumes stronger equity market returns, capital-raising efforts, and realization levels than we project in our base case. The net result is a 9.5% CAGR for base management fees, with total revenue increasing at a 6.7% CAGR during 2026-30. Distributable earnings per share would also be 20%-25% higher on average annually.

Our downside-case fair value estimate of $84 per share implies a P/E multiple of 17.5 and 14.2 times our 2026 and 2027 distributable EPS estimates, respectively. This scenario assumes weaker equity markets, lower levels of capital raising, and lower levels of realizations due to unpalatable market conditions. The net result would be a negative 0.5% CAGR for base management fees, with total revenue declining at a 2.5% CAGR, during 2026-30. Distributable earnings would also be 20%-25% lower over our five-year projection period.

Risk and Uncertainty Greggory Warren, CFA, Senior Equity Analyst, 13 May 2026

Our Morningstar Uncertainty Rating for Blackstone is High and includes assessments of the firm's environmental, social, and governance issues. Blackstone's private equity and real estate/real asset investments are highly illiquid. Tightened credit conditions could limit the firm's ability to move into new investments, while weak economic conditions and difficult equity and credit markets could affect not only the value of Blackstone's investments but also its ability to cash out of these investments. The firm's real estate/real asset segment is also subject to the risks inherent in the ownership and operation of real estate and related businesses and assets.

Our fair value estimate anticipates modest annual reductions in base management and incentive/performance-based fees. Should fees be compressed at a far greater rate than we are anticipating, it would have a major impact on the firm. Poor investment performance can also affect revenue, profitability, and cash flows and potentially obligate the firm to repay carried interest earned in prior periods. It could also have a negative impact on the company's ability to raise new capital for future

investment funds, given that limited partners typically recycle distributions from earlier funds into new ones.

Given its global footprint, the firm is exposed to cultural, economic, political, and currency risks, while further changes in relevant US and foreign tax laws, regulations, or treaties could adversely affect Blackstone as well. While the company is at a lower risk of experiencing material financial impacts from ESG factors, its medium exposure to risks that are inherent to the industry, as well as its own operations, is complicated by its weaker corporate governance scores.

Capital Allocation Greggory Warren, CFA, Senior Equity Analyst, 13 May 2026

Our Morningstar Capital Allocation Rating for Blackstone is Standard. This rating assesses management efficacy across three key areas: balance sheet health, investment performance, and shareholder distributions. Given that a firm's financial health directly affects its ability to invest in future growth opportunities, return cash to shareholders, or even remain a going concern, it is important to pay attention to balance sheet strength. Asset managers have a high degree of revenue cyclicality and operating leverage (with results often affected by market vagaries) and are generally asset-light. As such, they should maintain only low to moderate levels of financial leverage.

Blackstone, in our view, has maintained a sound balance sheet, highlighted by $2.4 billion in cash and equivalents, $8.9 billion in corporate treasury and other investments, $3.0 billion in general partner fund investments, $7.0 billion in accrued performance revenue, and $12.4 billion in long-dated debt (on a principal basis) on its books at the end of the first quarter of 2026. The company has historically had low debt/total capital and debt/EBITDA levels, and we expect net debt/adjusted EBITDA (as well as the enterprise value) to remain very low. Just under 25% of the company's outstanding debt is due in the next three years.

Blackstone believes its ever-increasing scale, diversified business offerings, long record of investment performance, rigorous investment process, and strong client relationships position it to perform well in a variety of market conditions and also expand its managed assets and add complementary businesses. The company's long-term strategy has been focused on the fundraising, investment, and realization phases of its private equity, real estate, credit (and insurance), and hedge fund offerings, as well as returning capital to shareholders.

Fundraising has more recently shifted away from Blackstone's more traditional model of using finite-lived, long-dated funds to invest in underperforming companies and assets (using cost cuts and efficiency improvements to improve those operations while also lifting returns through the strategic use of debt) to a mix of both finite-lived, long-dated funds and "perpetual capital" (funds with an indefinite term that is not in liquidation, and for which there is no requirement to return capital to investors through redemption requests in the ordinary course of business).

The company looks to deliver differentiated investments through new fund strategies (like the firm's

MORNINGSTAR®

Blackstone Inc BX ★★★★ 19 May 2026 21:31, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
117.04 USD 18 May 2026	140.00 USD 13 May 2026 21:15, UTC	0.82	139.57 USD Bil 19 May 2026	Wide	Large Blend	High	Standard	16 May 2026 05:00, UTC

efforts over the past several years with infrastructure, insurance, life sciences, and technology funds). Blackstone's business heads have been encouraged to think more thematically about investing and identify global trends (like logistics, life sciences, software, and digital payments more recently) where the firm can put money to work for the benefit of its limited partners (the institutional and retail investors that commit capital to their funds) and, ultimately, the firm's shareholders.

Share repurchases have been rare during the past decade, with the company repurchasing (net of issuances) just over $4.8 billion of stock. Dividend payments were a little over $38.5 billion during 2016-25 and are expected to account for 85% of distributable earnings annually going forward.

Chair and CEO Stephen Schwarzman co-founded Blackstone in 1985 and has been involved in all phases of the firm's development. Lines of succession have been relatively clear over the years, with Jonathan Gray (formerly head of the firm's real estate segment) succeeding Hamilton James as president and COO in 2018.

We believe Schwarzman and the other general partners at Blackstone have run the firm as effectively as possible in the years following the 2008-09 financial crisis, taking full advantage of the dislocation in the equity and credit markets to expand operations—primarily in real estate and credit—thereby reducing the firm's exposure to the vagaries of the private equity market. While the firm did convert from a publicly traded partnership into a corporation in July 2019, senior leadership and directors hold around two-thirds of partnership units, with Schwarzman holding 52%.

Analyst Notes Archive

Blackstone Earnings: Solid Q1 from the Alternative Asset Managers; Shares Modestly Undervalued

Greggory Warren, CFA,Senior Equity Analyst,23 Apr 2026

Blackstone ended March 2026 with $938 billion in fee-earning assets under management up 1.7% sequentially and 9.0% year over year. Total revenue increased 10.0% year over year to $3.6 billion in the quarter, while fee-related earnings increased 22.7% to $1.5 billion.Why it matters: Blackstone continues to generate positive flows, with its mix of alternative products—through its real estate, private equity, multi-asset investing, and credit and insurance segments—benefitting from ongoing demand for non-traditional products. The firm picked up $69 billion from fundraising efforts during the March quarter, above its quarterly run rate of $51 billion in the previous eight calendar quarters. Blackstone also deployed $36 billion during the period, slightly above its quarterly run rate of $34 billion over the past two years. Reported realizations of $36 billion were above the firm's quarterly run rate of $37 billion during the previous eight calendar quarters. Going forward, we expect more conducive capital markets to lead to above-average levels of realizations, further supporting ongoing fundraising and deployment efforts.The bottom line: With $1.304 trillion in total AUM, Blackstone remains the largest alternative asset manager in the world. Effective fundraising, deployment, and realization activities have enabled

MORNINGSTAR®

Blackstone Inc BX ★★★★ 19 May 2026 21:31, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
117.04 USD 18 May 2026	140.00 USD 13 May 2026 21:15, UTC	0.82	139.57 USD Bil 19 May 2026	Wide	Large Blend	High	Standard	16 May 2026 05:00, UTC

the firm to continue growing organically, despite the more volatile markets we've seen over the past five years. As there was little in wide-moat-rated Blackstone's first-quarter results that would alter our long-term view of the firm, we expect to leave our $145 per share fair value estimate in place. Blackstone's shares are modestly undervalued right now relative to our fair value estimate. That said, this is a big improvement on where the shares were trading in early March in response to heightened concerns about the private-credit market.

Blackstone: Fair Value Estimate Lowered by 17% on Private Credit Headwinds Greggory Warren, CFA,Senior Equity Analyst,30 Mar 2026

While Blackstone does not have as much direct lending exposure as private-credit-heavy peers Ares and Blue Owl, the alternative-asset manager will not be immune from the headwinds posed by concerns about the private credit market in the near to medium term.Why it matters: Alternative-asset managers rely on their reputation, product offerings, and investment record to raise capital and maintain their standing as go-to firms for institutional and high-net-worth investors looking for exposure to the private markets. Managers with alternative credit offerings, like Blackstone, have been hit hard by the negative perceptions attached to the private credit market brought on by peer Blue Owl's handling of some of its private credit funds, as well as concerns that artificial intelligence will disrupt software firms, a key area of direct lending for a lot of private credit funds. These issues have raised concerns about liquidity for these types of funds, especially given the riskiness of their direct lending portfolios. This is likely to affect fundraising efforts and increase redemption requests in the near to medium term. While Blackstone's exposure to private credit is far less than that of Blue Owl and Ares, the company does have enough exposure that we see it having an impact over the next several years.The bottom line: Expectations for diminished fundraising and increased redemptions for its credit and insurance segment have led us to reduce our fair value estimate for wide-moat-rated Blackstone to $145 per share from $175. The firm garnered 34% of its fee-earning assets under management and 25% of its base management fees from this segment last year. Even with the valuation change, the shares remain moderately undervalued, with few catalysts that we can see to bring them off their lows. That said, we have seen some movement in the market to separate the most at-risk firms from those with less exposure to direct lending.

Alternative Asset Managers: Blue Owl Disclosure Drives Share Prices of Alternative Managers Lower Greggory Warren, CFA,Senior Equity Analyst,20 Feb 2026

Shares of the alternative asset managers we cover were down close to 5% to 10% Feb. 19 but did recover to low- to mid-single-digit declines, after Blue Owl announced it was permanently halting redemptions at a private credit fund aimed at retail investors.Why it matters: The alternative asset managers took it on the chin after narrow-moat-rated Blue Owl announced it was halting redemptions at a private credit fund aimed at retail investors, reigniting concerns about the private credit market as

MORNINGSTAR®

Blackstone Inc BX ★★★★ 19 May 2026 21:31, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
117.04 USD 18 May 2026	140.00 USD 13 May 2026 21:15, UTC	0.82	139.57 USD Bil 19 May 2026	Wide	Large Blend	High	Standard	16 May 2026 05:00, UTC

well as raising questions about the suitability of illiquid private capital funds in the retail market. Blue Owl was hit the hardest, down just over 10% intraday, as the firm decided to permanently restrict investors from withdrawing their cash from one of its private debt funds. The firm announced that investors in Blue Owl Capital Corp II, or OBDC II, would no longer be able to make redemption requests from the fund in quarterly intervals but would have to wait for periodical payments as it sells down assets in the coming quarters and years. OBDC II has been closed to investor redemptions since November of last year, when the firm decided to abandon efforts to merge it with Blue Owl's larger publicly traded credit fund OBDC—a move that would have depleted the value of the holdings of wealthy investors in OBDC by up to 20%. At the time, Blue Owl had offered investors the ability to redeem cash every quarter at the fund's stated value, generally up to 5% of net assets (similar to what we saw at Blackstone's private real estate fund a few years ago).The bottom line: While we've not built much into our alternative asset manager valuation models for the growth of private capital funds in the retail market, this is a warning sign for the industry and the rule makers about the downside of illiquid funds for retail investors. That said, we will be taking a closer look at Blue Owl, which will likely be pressured by redemption requests in the near term.

Alternative Asset Managers: Highlighting Blackstone as Private-Credit Market Concerns Tank Shares Greggory Warren, CFA,Senior Equity Analyst,12 Feb 2026

Shares of the alternative asset managers we cover have declined in the past several weeks, with the group as a whole down 10% since the start of 2025 and also down more than 15% over the past year.Why it matters: Increased uncertainty about the equity and credit markets tied to fiscal, tariff, and monetary policies, as well as economic growth and increased concerns about the private credit market have weighed on the share prices of most of the alternative asset managers. The private credit heavy alternative asset managers—Apollo (86% of fee-earning assets and 72% of base fees), Ares (66% and 65%), Blue Owl (53% and 61%), and KKR (48% and 30%)—have been among the hardest hit, down 10%, 15%, 13%, and 16%, respectively, since the start of the year. While not immune from the real and perceived headwinds in the markets, Blackstone, with its more balanced product portfolio (with just 34% of fee-earning assets and 25% of base fees coming from its credit and insurance segment), has seen its shares decline 12% since the start of the year—no doubt because it is the industry leader and has tended to trade at the highest multiple in the group. Meanwhile, Brookfield, which benefits from a heavy bent toward real estate/real assets, and Carlyle Group, which was coming off a couple of years of weaker performance, have been affected the least, up 1.0% and down 2.4%, respectively, so far in 2026.The bottom line: With all these firms having reported solid fourth-quarter earnings, and little in their quarterly reports and conference calls that would alter our near- to medium-term views, we expect to leave our $175, $150, $140, $55, $180, $60, and $18 per share fair value estimates for Blackstone, Apollo, KKR, Brookfield, Ares, Carlyle Group, and Blue Owl, respectively, in place.

Blackstone Inc BX ★★★★ 19 May 2026 21:31, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
117.04 USD 18 May 2026	140.00 USD 13 May 2026 21:15, UTC	0.82	139.57 USD Bil 19 May 2026	Wide	Large Blend	High	Standard	16 May 2026 05:00, UTC

Blackstone: The Firm's Shares Are Cheap After the Recent Selloff of the Alternative Asset Managers

Greggory Warren, CFA,Senior Equity Analyst,4 Feb 2026

Blackstone's shares have struggled to gain ground due to the uncertainties created by fiscal, tariff, and monetary policies, as well as economic growth, and increased concerns about the private credit market. Shares were down 7.9% in 2025 and are down another 13.1% since the start of the year.Why it matters: Increased uncertainty about the equity and credit markets tied to fiscal, tariff, and monetary policies, as well as economic growth and increased concerns about the private credit market have tossed around the share prices of most of the alternative asset managers. Private credit heavy alternative asset managers, like Apollo (86% of fee-earning assets and 72% of base fees), Ares (66% and 65%), and Blue Owl (53% and 61%) are among the firms hit the hardest, although we note that KKR (48% and 33%) has also seen its share price decline precipitously during the past six months. While not immune from the real and perceived headwinds in the markets, Blackstone, with its more balanced product portfolio, has held up a bit better than others in the group. Meanwhile, Brookfield, which benefits from a heavy bent toward real estate/real assets, and Carlyle Group, which was coming off a couple of years of weaker performance, are the least affected.The bottom line: We reiterate our $175 per share fair value estimate for wide-moat-rated Blackstone and view the shares as moderately undervalued, trading at a nearly 25% discount to our valuation. We expect Blackstone's fee-earning and total assets under management to reach $1.308 trillion and $1.718 trillion, respectively, at the end of 2029, with base management fees and total revenue increasing at a 9.1% and 7.4% CAGR, respectively, during 2025-29. We expect compensation expenses to average 42%-43% of annual revenue during the next five years, with distributable earnings (which remove the effects of unrealized activity) likely to average $8 billion to $10 billion annually during our five-year forecast.

Blackstone Earnings: Solid Quarter From the Alternative Asset Managers; Shares Modestly Undervalued Greggory Warren, CFA,Senior Equity Analyst,29 Jan 2026

Blackstone ended December 2025 with $922 billion in fee-earning assets under management, or AUM, up 1.7% sequentially and 11.0% year over year. Total revenue increased 41.4% year over year to $4.4 billion in the quarter, while fee-related earnings declined 16.4% to $1.5 billion.Why it matters: Blackstone continues to generate positive flows, with its mix of alternative products—through its real estate, private equity, multi-asset investing, and credit and insurance segments—benefiting from ongoing demand for nontraditional products. The firm picked up $71 billion from fundraising efforts during the third quarter, above its quarterly run rate of $49 billion in the previous eight calendar quarters. Blackstone also deployed $42 billion during the period, above its quarterly run rate of $33 billion over the past two years. Reported realizations of $46 billion were well above the firm's quarterly run rate of $23 billion in the previous eight calendar quarters. Going forward, we expect more conducive capital markets will lead to above-average levels of realizations, further supporting ongoing fundraising

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
117.04 USD 18 May 2026	140.00 USD 13 May 2026 21:15, UTC	0.82	139.57 USD Bil 19 May 2026	Wide	Large Blend	High	Standard	16 May 2026 05:00, UTC

ESG Risk Rating Breakdown

Exposure	
Company Exposure[1]	40.9
– Manageable Risk	39.2
Unmanageable Risk[2]	**1.7**
Management	
Manageable Risk	39.2
– Managed Risk[3]	17.6
Management Gap[4]	**21.6**
Overall Unmanaged Risk	**23.2**

- Exposure represents a company's vulnerability to ESG risks driven by their business model
- Exposure is assessed at the Subindustry level and then specified at the company level
- Scoring ranges from 0-55+ with categories of low, medium, and high-risk exposure

- Management measures a company's ability to manage ESG risks through its commitments and actions
- Management assesses a company's efficiency on ESG programs, practices, and policies
- Management score ranges from 0-100% showing how much manageable risk a company is managing

ESG Risk Rating

ESG Risk Ratings measure the degree to which a company's value is impacted by environmental, social, and governance risks, by evaluating the company's ability to manage the ESG risks it faces.

1. A company's Exposure to material ESG issues 2. Unmanageable Risk refers to risks that are inherent to a particular business model that cannot be managed by programs or initiatives 3. Managed Risk = Manageable Risk multiplied by a Management score of 44.9% 4. Management Gap assesses risks that are not managed, but are considered manageable 5. ESG Risk Rating Assessment = Overall Unmanaged Risk = Management Gap plus Unmanageable Risk

ESG Risk Rating Assessment[5]

ESG Risk Rating is of May 16, 2026. Highest Controversy Level is as of May 08, 2026. Sustainalytics Subindustry: Asset Management and Custody Services. Sustainalytics provides Morningstar with company ESG ratings and metrics on a monthly basis and as such, the ratings in Morningstar may not necessarily reflect current Sustainalytics' scores for the company. For the most up to date rating and more information, please visit: sustainalytics.com/esg-ratings/.

Peer Analysis 16 May 2026

Peers are selected from the company's Sustainalytics-defined Subindustry and are displayed based on the closest market cap values

MORNINGSTAR®

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, indepth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss shortterm market-price movements), but we believe these negatives are mitigated by deep analysis and our longterm approach.

Morningstar's equity research group ("we," "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our singlepoint star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

When considering a company's moat, we also assess whether there is a substantial threat of value destruction, stemming from risks related to ESG, industry disruption, financial health, or other idiosyncratic issues. In this context, a risk is considered potentially value destructive if its occurrence would eliminate a firm's economic profit on a cumulative or midcycle basis. If we deem the probability of occurrence sufficiently high, we would not characterize the company as possessing an economic moat.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in workingcapital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

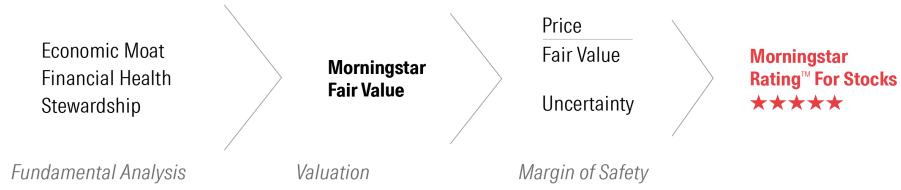

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total present value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty Around That Fair Value Estimate

Morningstar's Uncertainty Rating is designed to capture the range of potential outcomes for a company's intrinsic value. This rating is used to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating is aimed at identifying the confidence we should have in assigning a fair value estimate for a given stock.

Our Uncertainty Rating is meant to take into account anything that can increase the potential dispersion of future

MORNINGSTAR®

Research Methodology for Valuing Companies

outcomes for the intrinsic value of a company, and anything that can affect our ability to accurately predict these outcomes. The rating begins with a suggested rating produced by a quantitative process based on the trailing 12-month standard deviation of daily stock returns. An analyst overlay is then applied, with analysts using the suggested rating, historical rating data, and their own knowledge of the company to inform them as they make the final Uncertainty Rating decision. Ultimately, the rating decision rests with the analyst. Analysts take into account many characteristics when making their final decision, including cyclical factors, operational and financial factors such as leverage, company-specific events, ESG risks, and anything else that might increase the potential dispersion of future outcomes and our ability to estimate those outcomes.

Our recommended margin of safety—the discount to fair value demanded before we'd recommend buying or selling the stock—widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the potential dispersion of outcomes, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the Uncertainty Rating provides guidance in portfolio construction based on risk tolerance.

Our Uncertainty Ratings are: Low, Medium, High, Very High, and Extreme.

	Margin of Safety	
Qualitative Analysis Uncertainty Ratings	★★★★★Rating	★Rating
Low	20% Discount	25% Premium
Medium	30% Discount	35% Premium
High	40% Discount	55% Premium
Very High	50% Discount	75% Premium
Extreme	75% Discount	300% Premium

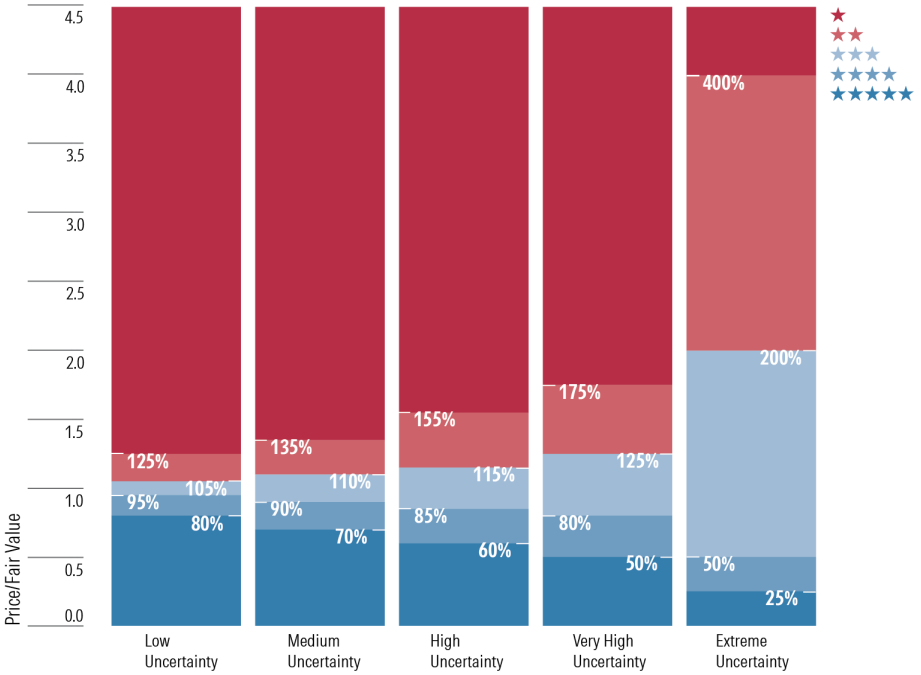

Our uncertainty rating is based on the interquartile range, or the middle 50% of potential outcomes, covering the 25th percentile–75th percentile. This means that when a stock hits 5 stars, we expect there is a 75% chance that the intrinsic value of that stock lies above the current market price. Similarly, when a stock hits 1 star, we expect there is a 75% chance that the intrinsic value of that stock lies below the current market price.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more details about our methodology, please go to https://shareholders.morningstar.com

Morningstar Equity Research Star Rating Methodology

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

★★★★★ We believe appreciation beyond a fair risk adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

★★★★ We believe appreciation beyond a fair risk-adjusted return is likely.

★★★ Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

★★ We believe investors are likely to receive a less than fair risk-adjusted return.

★ Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments,

MORNINGSTAR®

Research Methodology for Valuing Companies

and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments, and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Sustainalytics ESG Risk Rating Assessment: The ESG Risk Rating Assessment is provided by Sustainalytics; a Morningstar company.

Sustainalytics' ESG Risk Ratings measure the degree to which company's economic value at risk is driven by environment, social and governance (ESG) factors.

Sustainalytics analyzes over 1,300 data points to assess a company's exposure to and management of ESG risks. In other words, ESG Risk Ratings measures a company's unmanaged ESG Risks represented as a quantitative score. Unmanaged Risk is measured on an open-ended scale starting at zero (no risk) with lower scores representing less unmanaged risk and, for 95% of cases, the unmanaged ESG Risk score is below 50.

Based on their quantitative scores, companies are grouped into one of five Risk Categories (negligible, low, medium, high, severe). These risk categories are absolute, meaning that a 'high risk' assessment reflects a comparable degree of unmanaged ESG risk across all subindustries covered.

The ESG Risk Rating Assessment is a visual representation of Sustainalytics ESG Risk Categories on a 1 to 5 scale. Companies with Negligible Risk = 5 Globes, Low Risk = 4, Medium Risk = 3 Globes, High Risk = 2 Globes, Severe Risk = 1 Globe. For more information, please visit sustainalytics.com/esg-ratings/

Ratings should not be used as the sole basis in evaluating a company or security. Ratings involve unknown risks and uncertainties which may cause our expectations not to occur or to differ significantly from what was expected and should not be considered an offer or solicitation to buy or sell a security.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

by local and/or regional regulatory bodies, including laws in connection with the distribution third-party research reports.

Conflicts of Interest

- No interests are held by the analyst with respect to the security subject of this investment research report.
- Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com
- Analysts' compensation is derived from Morningstar, Inc.'s overall earnings and consists of salary, bonus and in some cases restricted stock.
- Neither Morningstar, Inc. or the Equity Research Group receives commissions for providing research nor do they charge companies to be rated.
- Morningstar's overall earnings are generated in part by the activities of the Investment Management and Research groups, and other affiliates, who provide services to product issuers.
- Morningstar employees may not pursue business and employment opportunities outside Morningstar within the investment industry (including but not limited to, working as a financial planner, an investment professional or investment professional representative, a broker-dealer or broker-dealer agent, a financial writer, reporter, or analyst) without the approval of Morningstar's Legal and if applicable, Compliance teams.
- Neither Morningstar, Inc. or the Equity Research Group is a market maker or a liquidity provider of the security noted within this report.
- Neither Morningstar, Inc. or the Equity Research Group has been a lead manager or co-lead manager over the previous 12-months of any publicly disclosed offer of financial instruments of the issuer.
- Morningstar, Inc.'s investment management group does have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them.
- Morningstar, Inc. is a publicly traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section https://shareholders.morningstar.com/investor-relations/financials/sec-filings/default.aspx
- Morningstar, Inc. may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar, Inc.'s conflict of interest policies is available from http://global.morningstar.com/equitydisclosures. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

Risk Warning Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security's investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions.
