Chubb Earnings: Profitability Holds Steady Amid Favorable Market Conditions

Analyst Note Brett Horn, CFA, Senior Equity Analyst, 22 Apr 2026

Chubb continued to generate strong returns in the first quarter, with underwriting margins holding steady and investment income continuing to rise.

Why it matters: The company's annualized adjusted return on tangible equity was 21% in the quarter, in line with the full-year level in 2025 and above the company's historical average.

- The underlying combined ratio for Chubb's P&C lines in the quarter was 82.1%, in line with recent results. While the company is seeing some improvement in personal lines underwriting margins, it's not enough to materially move overall results.
- Adjusted investment income was up 10% year over year. While this improvement appears to have come entirely from higher balances, there is likely still some room to roll into higher yields over time.

The bottom line: We will maintain our $297 per share fair value estimate for the narrow-moat company and see Chubb's shares as modestly overvalued. We think the market is overly focused on recent industry tailwinds.

- Growth in the North American commercial segment was muted with net written premiums up only 2% year over year. Overall P&C growth was 4% on a constant-currency basis. Management noted that it has pulled back in certain property lines due to inadequate pricing.
- While we expect returns to remain attractive in the near term, we believe profitability at Chubb and

Business Description

ACE acquired Chubb in 2016 and assumed the Chubb name. The combination made the new Chubb one of the largest domestic property and casualty insurers, with operations in over 50 countries spanning commercial and personal P&C insurance, reinsurance, and life insurance.

its peers will normalize over the next few years. Pricing is typically the lever to push returns back toward historical norms, and we are seeing evidence of weaker pricing in certain lines, although it will take time for this to fully work its way into results.

Business Strategy & Outlook Brett Horn, CFA, Senior Equity Analyst, 5 Mar 2026

In 2016, ACE acquired Chubb in a deal valued at about $28 billion and assumed its name. From a long-term perspective, we were most enthusiastic about the fact that the combination created a moaty international insurer with exposure across most insurance lines for the first time, marking Chubb as potentially the most attractive long-term core holding in the space from a fundamental point of view.

In 2020, the coronavirus affected the industry's and Chubb's results, and the company's covid-19 losses were roughly in line with peers' as a percentage of premiums. The impact at Chubb and peers was manageable and well within the range of events that the industry has successfully absorbed in the past. But the pandemic ultimately created a tailwind. Pricing momentum picked up in primary commercial lines in 2019, and this positive trend only accelerated in 2020 and largely maintained its momentum over the next few years. Over the past few years, the industry has enjoyed the highest price increases it has seen in about two decades. While higher pricing was necessary to some extent to offset a rise in social inflation and other claims trends, pricing increases were more than sufficient to offset these factors.

As a result, Chubb and its commercial line peers have experienced a positive trend in underlying underwriting profitability, similar to the period that followed 9/11. In this scenario, narrow-moat and highly disciplined operators like Chubb have been able to earn very attractive returns. However, results over the past couple of years suggest that underwriting profitability is leveling off, albeit at an attractive level. More recently, higher interest rates have provided an additional boost. While this is a recipe for outsize returns in the near term, historical industry results suggest underwriting margins will ultimately contract if interest rates stay high. Recently, pricing in some lines has started to weaken, which is likely the first step in this process.

Bulls Say Brett Horn, CFA, Senior Equity Analyst, 5 Mar 2026

- Chubb is one of the few companies with global footprint large enough to service multinational corporations. Its network has created a barrier to entry for potential competitors.
- Chubb is a large insurer with leading positions in the most moaty areas of the P&C insurance industry.
- Chubb's international operations benefit from stronger growth opportunities.

Bears Say Brett Horn, CFA, Senior Equity Analyst, 5 Mar 2026

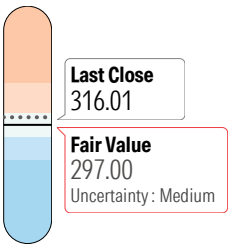

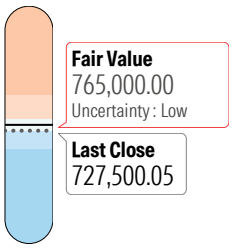

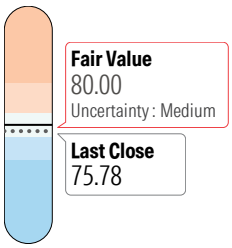

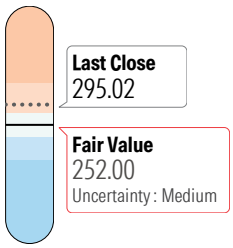

- Large corporations often have substantial bargaining power, which may hurt Chubb when negotiating on premium pricing.
- While near-term results will likely remain strong, returns will likely come under pressure over time.

▶ We think Chubb's life insurance operations are dilutive to the company's moat, and we don't see a valid strategic connection with its core P&C operations.

Economic Moat Brett Horn, CFA, Senior Equity Analyst, 5 Mar 2026

In general, insurers do not benefit from favorable competitive positions. Industry competition is fierce, and the products are essentially commodities. Furthermore, most participants do not know their cost of goods sold for a number of years, allowing them to underprice policies without knowing it. Firms are encouraged to chase growth without regard for profitability, a cycle that repeats itself as competitors are forced to match artificially low prices or risk losing business.

Despite the fact that Chubb is a large, diversified insurer, we think its underlying business is moaty. ACE's and Chubb's legacy businesses centered on commercial lines, but they served different segments. ACE historically focused on serving large, global clients. Often, these companies have risks

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
316.01 USD 13 May 2026	297.00 USD 6 Mar 2026 04:30, UTC	1.06	122.57 USD Bil 13 May 2026	Narrow	Large Blend	Medium	Standard	13 May 2026 05:00, UTC

that do not fit nicely into one country or one particular policy line. To service complex accounts, an insurance company must be able to match these unique and diverse risks with an equally diversified global network. Since its formation in 1985, ACE built a franchise with operations in more than 50 countries, and in so doing, carved out a strong position in this niche. Few have such a footprint, and ACE consequently benefited from strong relationships with many members of the Fortune 1000.

Chubb historically served middle-market commercial clients. While competitive barriers are lower in this area, we think Chubb's middle-market business is moaty, as the company is an entrenched leader in the space. Further, the business contains a large portion of lines that we would consider specialty—for instance, its executive liability and surety business.

The personal lines business also primarily comes from the old Chubb business. We think that building a moat in personal lines is a lot tougher than in commercial lines, given the standardized nature of most personal policies. However, Chubb primarily targets high-net-worth individuals. Because of the high value of their assets and their sometimes unique nature (such as yachts or fine art), insurance companies require assessments on the current value of their property, which increases policyholder duration and lowers acquisition costs. Furthermore, individual exposures are large, so an insurer needs substantial size for the law of large numbers to hold, which limits the number of carriers that can successfully operate in this area. Finally, Chubb's international presence is a plus in this line, as high-net-worth individuals often have insurable assets spread across multiple countries. Thus, its personal lines are a unique example of a niche noncommercial line, in our view.

While we don't believe the combined company's smaller lines necessarily have moats, they have been solid performers, and the commercial and personal segments account for about 75% of premiums. As such, we believe a Narrow Morningstar Economic Moat Rating is appropriate for the firm as a whole. In the years since the merger, Chubb's combined ratio has averaged 91%, which is one of the best results in the P&C insurance industry.

Fair Value and Profit Drivers Brett Horn, CFA, Senior Equity Analyst, 5 Mar 2026

We are increasing our fair value estimate to $297 per share from $283 due to the time value of money since our last update and some modest adjustments to our assumptions. Our fair value estimate is equivalent to 1.6 and 2.3 times year-end 2025 book value and book value excluding goodwill and accumulated other comprehensive income, respectively.

We forecast a 3% compound annual growth rate for net earned premiums through our projection period. The company's international operations do modestly boost its long-term growth prospects, but we believe Chubb's size will make it difficult to dramatically outstrip industry growth over time. Additionally, we think weaker industry pricing will be a bit of a headwind for Chubb and its peers going forward.

MORNINGSTAR®

Chubb Ltd CB ★★★ 13 May 2026 21:23, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
316.01 USD 13 May 2026	297.00 USD 6 Mar 2026 04:30, UTC	1.06	122.57 USD Bil 13 May 2026	Narrow	Large Blend	Medium	Standard	13 May 2026 05:00, UTC

We expect the combined ratio to average 91% throughout our projection period, in line with the company's 91% average since the Chubb merger. We think recent pricing increases will allow the company to continue to generate relatively strong underwriting margins in the near term. However, we expect industry combined ratios to creep up over time, as we expect higher interest rates and investment income will reduce the need to generate strong underwriting profits. Our projections include one large catastrophe loss year in the back half of our projection period to incorporate the inherent volatility of the lines Chubb underwrites.

But these combined trends should continue to drive strong returns in the near term. The net effect of our forecast is an average return on equity (adjusted to exclude intangible assets and AOCI) of 18% over the projection period.

We use a cost of equity of 9%.

Risk and Uncertainty Brett Horn, CFA, Senior Equity Analyst, 5 Mar 2026

We assign Chubb a Morningstar Uncertainty Rating of Medium.

As with other insurers, the biggest risks are claims in excess of the amount reserved or material impairments within the investment portfolio. The company operates in some lines with long tails, where pricing mistakes are more difficult to rectify. Further, Chubb has meaningful exposure to natural catastrophes and other weather-related losses, which can be quite volatile year to year. Historically, Chubb has been a disciplined underwriter, which is a positive, but also leads to limited growth and periods where the company is sitting on excess capital that can hamper returns in soft pricing markets. About 40% of premiums come from outside the United States, exposing the company to currency and event risk.

Some environmental, social, and governance issues for P&C insurers arise in a secondhand fashion, through the industries the insurer serves or investments. For commercial insurers, insuring industries with a high level of ESG risk could draw criticism and lead to lost revenue if the situation becomes untenable. Insurers can also draw criticism with regard to the extent to which they incorporate ESG into their investment decisions. But we see this issue as relatively minor, as shifting investment practices should be a relatively easy fix. The biggest issue for P&C insurers is climate change, as insurers typically cover weather-related losses, and climate change is likely to increase the frequency and severity of extreme weather events. Profitability could be significantly impaired if insurers do not recognize these risks and adjust their underwriting practices accordingly. While Chubb faces all of these issues, we do not see any particular flags for the company.

Capital Allocation Brett Horn, CFA, Senior Equity Analyst, 5 Mar 2026

Our Morningstar Capital Allocation Rating for Chubb is Standard. In our opinion, the company's balance

Chubb Ltd CB ★★★ 13 May 2026 21:23, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
316.01 USD 13 May 2026	297.00 USD 6 Mar 2026 04:30, UTC	1.06	122.57 USD Bil 13 May 2026	Narrow	Large Blend	Medium	Standard	13 May 2026 05:00, UTC

sheet is sound, its capital investment decisions are fair, and its capital return strategy is appropriate.

Following the acquisition of Chubb, Evan Greenberg, who had been CEO at ACE since 2004, became chair and CEO of the combined firm. We have a generally favorable view of Greenberg's management record, and we believe the company is in good hands. During his tenure, Greenberg has been aggressive in expanding the company's operations through acquisitions, but we don't believe his acquisitions have diluted the company's moat. In our view, his attraction to Chubb demonstrates that he appreciates the value of moaty franchises when evaluating targets, although we have a more skeptical view of more recent moves.

Management faced a daunting task in fully integrating these two firms, but Chubb avoided any material operational hiccups, and management upped its initial and already sizable estimate of cost synergies. In the long run, we think maintaining the companies' superior underwriting results was the key to success, and that has been the case.

We think Chubb's size and position in a mature industry could limit long-term growth, but we would expect Greenberg to be aggressive in realizing inorganic opportunities. It's certainly possible, given Greenberg's history, that the Chubb merger might not be his last big deal—and recent events suggest it's unlikely he'll sit completely still.

In 2021, Chubb announced its intent to acquire The Hartford. While this proposal seemed to have some similarities with the Chubb combination, we don't think The Hartford is nearly as strong a franchise, and the proposed premium looked substantial. We believed the deal would have diluted Chubb's moat. Ultimately, The Hartford rejected Chubb's initial offer, and Chubb refused to increase its bid. We appreciate management's willingness to walk away.

In 2022, Chubb acquired the personal accident, supplemental health, and life insurance business of Cigna in six Asia-Pacific markets and Turkey for $5.75 billion in cash. Net written premiums for these businesses totaled $3 billion in 2020. While the price didn't appear unreasonable, we're not enthusiastic about acquisitions outside Chubb's commercial and high-net-worth P&C operations, as we believe expanding outside of these areas could dilute the company's moat. We would tend to view any future expansion into life insurance negatively from a moat perspective, as we believe moats are incredibly difficult to develop in that space.

Analyst Notes Archive

Chubb Earnings: Strong Finish to a Very Good Year Brett Horn, CFA,Senior Equity Analyst,4 Feb 2026

Like its peers, Chubb has been enjoying tailwinds on both the underwriting and investment sides of the business. Those favorable trends remained in place in the fourth quarter, with the company posting particularly strong underwriting results.Why it matters: Chubb's annualized adjusted tangible returns on equity of 24% for the quarter and 21% for the full year were both well above the historical average

Chubb Ltd CB ★★★ 13 May 2026 21:23, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
316.01 USD 13 May 2026	297.00 USD 6 Mar 2026 04:30, UTC	1.06	122.57 USD Bil 13 May 2026	Narrow	Large Blend	Medium	Standard	13 May 2026 05:00, UTC

and highlight the tailwinds that the company is enjoying at the moment. The fourth quarter saw improvement from already strong underwriting results. The underlying combined ratio for the property-casualty operations came in at 80.4%, compared with 82.2% last year and 82.5% last quarter. The improvement appears to be mainly coming from North American personal and agricultural lines. We're skeptical that it will persist, as agricultural lines are inherently volatile and pricing in some personal lines has flattened out. Underlying underwriting margins in North American commercial lines held in line with recent results, and we think commercial underwriting margins have likely peaked.The bottom line: We will maintain our $283 fair value estimate for the narrow-moat company and see the shares as modestly overvalued. Investment income in the quarter increased 8% year over year. While we think Chubb is still seeing some benefit from higher long-term interest rates, the increase appears to have been driven mainly by higher balances. We appreciate current industry tailwinds, but we think the market is extrapolating this favorable period too far into the future, resulting in industry valuations that are stretched from a long-term perspective. We believe weaker pricing will be the primary catalyst for a move back to more normalized returns and see signs that this is starting to occur in certain lines.

Chubb Earnings: Favorable Industry Conditions and Low Catastrophe Losses Drive Strong Results
Brett Horn, CFA,Senior Equity Analyst,22 Oct 2025

Chubb continued to benefit from tailwinds in the third quarter. Strong industry conditions, in combination with relatively low catastrophe losses, led to a particularly strong quarter. Why it matters: The annualized adjusted tangible return on equity of 25% in the quarter demonstrates the strength of the tailwinds Chubb and its peers are enjoying. Net written premiums for P&C operations were up 5% year over year. Growth remains weighted toward personal lines, given relatively strong pricing trends in that area. The underlying combined ratio declined to 82.5% from 83.4% last year, with improvement concentrated in personal lines. We think underwriting margins in commercial lines have likely peaked, but there could be some room for further improvement in personal lines given recent pricing trends. The bottom line: We will maintain our $267 fair value estimate for the narrow-moat company and see shares as about fairly valued. Investment income increased 9% year over year as Chubb continues to reinvest fixed income at higher interest rates. An additional tailwind in the quarter was catastrophe losses, which declined to $285 million, compared with $765 million last year. We think industry returns have likely peaked and expect returns to move back in line with historical averages over the next couple of years. While we expect strong returns to persist for Chubb and it peers in the very near term, we see signs that pricing is weakening in certain lines, and weaker pricing would likely be the first step in this process.

Chubb Earnings: Bounce Back to Strong Results Brett Horn, CFA,Senior Equity Analyst,23 Jul 2025

Due to industry tailwinds, Chubb bounced back to strong results in the second quarter as it moved past the California wildfires earlier this year. Why it matters: The company's annualized return on equity of

18% in the quarter highlights the favorable market conditions Chubb is enjoying. Net written premiums for property and casualty insurance operations were up 6% year over year on a constant currency basis. Commercial lines were up 6%, with casualty lines outperforming property lines. Personal lines continue to see strong pricing increases, with premiums up 14%. The underlying combined ratio for property and casualty insurance operations improved modestly to 82.3%, compared with 83.2% in the year-ago period. Commercial line results were basically steady year over year, and we think commercial underwriting margins for Chubb and peers have likely peaked. Meanwhile, personal lines results have improved, and we think there could be room for more improvement based on recent price increases. The bottom line: We will maintain our $263 per share fair value estimate for the narrow-moat company. We see shares as fairly valued. Higher interest rates remain a tailwind for Chubb, with adjusted investment income up 8% year over year. While this provides a near-term boost, we would expect underwriting results to react to the interest rate environment in the long run.

Chubb Earnings: California Wildfires Offset Otherwise Strong Results Brett Horn, CFA,Senior Equity Analyst,23 Apr 2025

Chubb saw $1.5 billion in losses from the California wildfires, which offset otherwise strong industry conditions during the first quarter. Why it matters: The annualized return on equity of 8% during the first quarter largely reflected the impact of the California wildfires, but underlying underwriting conditions remained attractive. The underlying combined ratio for Chubb's P&C operations, which excludes catastrophe losses and reserve development, was 82.3% in the quarter, compared with 83.7% last year and 82.2% in the previous quarter. We think commercial underwriting margins for Chubb and its peers have likely peaked, and we don't expect improvement from current levels. However, there could be some additional near-term upside in personal lines. While there was some noise in reported results, adjusted overall premium growth was roughly in line with the previous quarter, with the insurer's North American and foreign operations seeing constant currency year-over-year net written premium growth of 6% and 7%, respectively. Growth in North America remains weighted toward personal lines. The bottom line: Like its peers, Chubb is enjoying tailwinds across its business, as underwriting margins remain strong and higher interest rates are boosting investment income. Absent the California wildfires, we think the company would have earned substantial excess returns in the quarter. Investment income increased 12% year over year. While this provides a near-term boost, we would expect underwriting results to react to the interest rate environment in the long run. We will maintain our $263 per share fair value estimate for the narrow-moat company. We see the shares as modestly overvalued, as we think the market is overly focused on current industry tailwinds.

Chubb Earnings: Holding Steady Amid Tailwinds Brett Horn, CFA,Senior Equity Analyst,29 Jan 2025

Chubb produced another strong quarter to finish off the year. Like its peers, narrow-moat Chubb is benefiting from relatively strong underwriting conditions and higher interest rates. This led to a 22%

Chubb Ltd CB ★★★ 13 May 2026 21:23, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
316.01 USD 13 May 2026	297.00 USD 6 Mar 2026 04:30, UTC	1.06	122.57 USD Bil 13 May 2026	Narrow	Large Blend	Medium	Standard	13 May 2026 05:00, UTC

annualized adjusted tangible return on equity in the quarter, in line with the previous quarter and the full-year result. We believe conditions will remain favorable in the near term, but we would caution that the insurance industry is highly competitive and inherently mean-reverting over the long run. We will maintain our $245 fair value estimate and see shares as modestly overvalued, as we believe the market is overly focused on the near-term picture.Net written premiums in P&C lines grew 7% year-over-year in the quarter, with commercial and personal lines seeing 6% and 8% growth, respectively. Premium growth in personal lines continues to moderate as the company laps the strong pricing increases it enjoyed previously.The reported combined ratio for property-casualty insurance lines came in at 85.7%, compared with 85.5% last year. However, the company saw a relatively higher level of catastrophe losses and the underlying combined ratio improved by 210 basis points year over year, and 120 basis points sequentially. The improvement appears to be driven almost entirely by personal lines. We've seen underwriting margins flatten out for commercial insurers over the past year or so, and we think industry underwriting margins have peaked on the commercial side, but there is still potential room for improvement in personal lines given recent pricing trends.Net investment income increased 14% year over year, roughly in line with the previous quarter. Like its peers, Chubb is enjoying a boost from higher interest rates. While this creates an additional near-term tailwind, we would expect underwriting results to react to the interest-rate environment in the long run.

US P&C Insurance: Losses From California Fires Look Large but Manageable Brett Horn, CFA,Senior Equity Analyst,10 Jan 2025

Loss estimates from the fires in the Los Angeles area appear to be increasing. Morningstar DBRS previously estimated over $8 billion in insured losses, but we have seen larger estimates rolling in as the fires have remained largely uncontained. Early loss estimates from natural disasters are often imprecise, but it seems clear that this will be a meaningful loss event for the industry. Still, it appears losses will be manageable and will fall short of the losses the industry sees from large hurricanes. For context, Hurricane Katrina led to about $100 billion in insured losses in today's dollars, according to Aon.The regulatory situation in California has been tense in recent years, and the aftermath of this event might provide another test on this front. A number of insurers started to exit the California homeowners market in recent years, based on their view that the state regulator wasn't allowing adequate pricing increases to match increased risk. More recently, regulators have appeared to bend somewhat on this front. However, if insurers ask for large pricing increases on the back of this event and the California regulator balks, we could see insurers move away from the state. In our view, this is the best course for insurers to take if pricing is inadequate, and we have generally been encouraged by the discipline that the industry has shown in this respect in recent years.We generally see P&C insurance stocks as overvalued at the moment as we think the market is overly focused on near-term tailwinds for the industry. While we don't think losses from this event will be large enough to impact the fair value estimates or moat ratings for our domestic P&C insurance coverage, events such as this

ESG Risk Rating Breakdown

Exposure	
Company Exposure[1]	36.4
– Manageable Risk	34.7
Unmanageable Risk[2]	**1.7**
Management	
Manageable Risk	34.7
– Managed Risk[3]	16.3
Management Gap[4]	**18.4**
Overall Unmanaged Risk	**20.1**

- Exposure represents a company's vulnerability to ESG risks driven by their business model
- Exposure is assessed at the Subindustry level and then specified at the company level
- Scoring ranges from 0-55+ with categories of low, medium, and high-risk exposure

- Management measures a company's ability to manage ESG risks through its commitments and actions
- Management assesses a company's efficiency on ESG programs, practices, and policies
- Management score ranges from 0-100% showing how much manageable risk a company is managing

ESG Risk Rating

ESG Risk Ratings measure the degree to which a company's value is impacted by environmental, social, and governance risks, by evaluating the company's ability to manage the ESG risks it faces.

ESG Risk Rating Assessment[5]

ESG Risk Rating is of May 13, 2026. Highest Controversy Level is as of May 08, 2026. Sustainalytics Subindustry: Property and Casualty Insurance. Sustainalytics provides Morningstar with company ESG ratings and metrics on a monthly basis and as such, the ratings in Morningstar may not necessarily reflect current Sustainalytics' scores for the company. For the most up to date rating and more information, please visit: sustainalytics.com/esg-ratings/.

1. A company's Exposure to material ESG issues 2. Unmanageable Risk refers to risks that are inherent to a particular business model that cannot be managed by programs or initiatives 3. Managed Risk = Manageable Risk multiplied by a Management score of 47.0% 4. Management Gap assesses risks that are not managed, but are considered manageable 5. ESG Risk Rating Assessment = Overall Unmanaged Risk = Management Gap plus Unmanageable Risk

Peer Analysis 13 May 2026

Peers are selected from the company's Sustainalytics-defined Subindustry and are displayed based on the closest market cap values

MORNINGSTAR®

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, indepth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss shortterm market-price movements), but we believe these negatives are mitigated by deep analysis and our longterm approach.

Morningstar's equity research group ("we," "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our singlepoint star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

When considering a company's moat, we also assess whether there is a substantial threat of value destruction, stemming from risks related to ESG, industry disruption, financial health, or other idiosyncratic issues. In this context, a risk is considered potentially value destructive if its occurrence would eliminate a firm's economic profit on a cumulative or midcycle basis. If we deem the probability of occurrence sufficiently high, we would not characterize the company as possessing an economic moat.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in workingcapital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

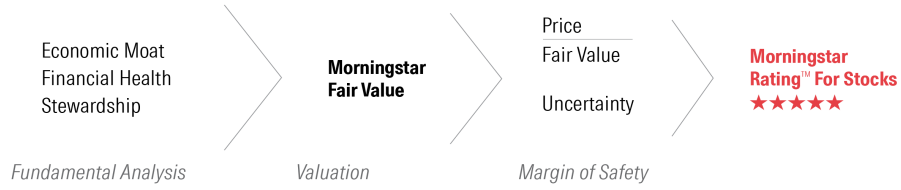

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total present value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty Around That Fair Value Estimate

Morningstar's Uncertainty Rating is designed to capture the range of potential outcomes for a company's intrinsic value. This rating is used to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating is aimed at identifying the confidence we should have in assigning a fair value estimate for a given stock.

Our Uncertainty Rating is meant to take into account anything that can increase the potential dispersion of future

MORNINGSTAR®

Research Methodology for Valuing Companies

outcomes for the intrinsic value of a company, and anything that can affect our ability to accurately predict these outcomes. The rating begins with a suggested rating produced by a quantitative process based on the trailing 12-month standard deviation of daily stock returns. An analyst overlay is then applied, with analysts using the suggested rating, historical rating data, and their own knowledge of the company to inform them as they make the final Uncertainty Rating decision. Ultimately, the rating decision rests with the analyst. Analysts take into account many characteristics when making their final decision, including cyclical factors, operational and financial factors such as leverage, company-specific events, ESG risks, and anything else that might increase the potential dispersion of future outcomes and our ability to estimate those outcomes.

Our recommended margin of safety—the discount to fair value demanded before we'd recommend buying or selling the stock—widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the potential dispersion of outcomes, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the Uncertainty Rating provides guidance in portfolio construction based on risk tolerance.

Our Uncertainty Ratings are: Low, Medium, High, Very High, and Extreme.

	Margin of Safety	
Qualitative Analysis Uncertainty Ratings	★★★★★Rating	★Rating
Low	20% Discount	25% Premium
Medium	30% Discount	35% Premium
High	40% Discount	55% Premium
Very High	50% Discount	75% Premium
Extreme	75% Discount	300% Premium

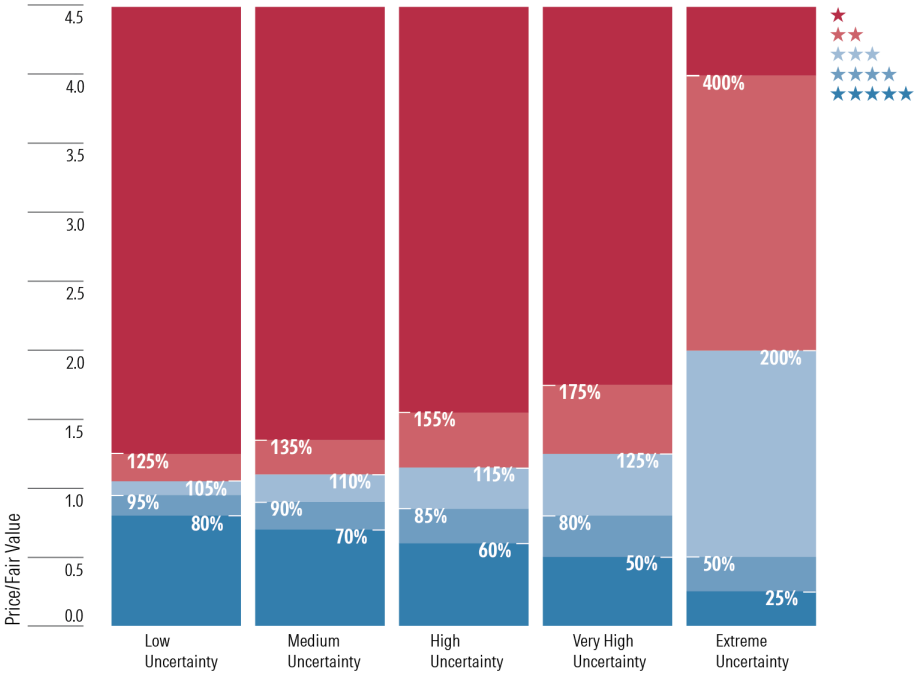

Our uncertainty rating is based on the interquartile range, or the middle 50% of potential outcomes, covering the 25th percentile–75th percentile. This means that when a stock hits 5 stars, we expect there is a 75% chance that the intrinsic value of that stock lies above the current market price. Similarly, when a stock hits 1 star, we expect there is a 75% chance that the intrinsic value of that stock lies below the current market price.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more details about our methodology, please go to https://shareholders.morningstar.com

Morningstar Equity Research Star Rating Methodology

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

★★★★★ We believe appreciation beyond a fair risk adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

★★★★ We believe appreciation beyond a fair risk-adjusted return is likely.

★★★ Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

★★ We believe investors are likely to receive a less than fair risk-adjusted return.

★ Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments,

MORNINGSTAR®

Research Methodology for Valuing Companies

and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments, and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Sustainalytics ESG Risk Rating Assessment: The ESG Risk Rating Assessment is provided by Sustainalytics; a Morningstar company.

Sustainalytics' ESG Risk Ratings measure the degree to which company's economic value at risk is driven by environment, social and governance (ESG) factors.

Sustainalytics analyzes over 1,300 data points to assess a company's exposure to and management of ESG risks. In other words, ESG Risk Ratings measures a company's unmanaged ESG Risks represented as a quantitative score. Unmanaged Risk is measured on an open-ended scale starting at zero (no risk) with lower scores representing less unmanaged risk and, for 95% of cases, the unmanaged ESG Risk score is below 50.

Based on their quantitative scores, companies are grouped into one of five Risk Categories (negligible, low, medium, high, severe). These risk categories are absolute, meaning that a 'high risk' assessment reflects a comparable degree of unmanaged ESG risk across all subindustries covered.

The ESG Risk Rating Assessment is a visual representation of Sustainalytics ESG Risk Categories on a 1 to 5 scale. Companies with Negligible Risk = 5 Globes, Low Risk = 4, Medium Risk = 3 Globes, High Risk = 2 Globes, Severe Risk = 1 Globe. For more information, please visit sustainalytics.com/esg-ratings/

Ratings should not be used as the sole basis in evaluating a company or security. Ratings involve unknown risks and uncertainties which may cause our expectations not to occur or to differ significantly from what was expected and should not be considered an offer or solicitation to buy or sell a security.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

MORNINGSTAR®

Research Methodology for Valuing Companies

by local and/or regional regulatory bodies, including laws in connection with the distribution third-party research reports.

Conflicts of Interest

- No interests are held by the analyst with respect to the security subject of this investment research report.
- Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com
- Analysts' compensation is derived from Morningstar, Inc.'s overall earnings and consists of salary, bonus and in some cases restricted stock.
- Neither Morningstar, Inc. or the Equity Research Group receives commissions for providing research nor do they charge companies to be rated.
- Morningstar's overall earnings are generated in part by the activities of the Investment Management and Research groups, and other affiliates, who provide services to product issuers.
- Morningstar employees may not pursue business and employment opportunities outside Morningstar within the investment industry (including but not limited to, working as a financial planner, an investment professional or investment professional representative, a broker-dealer or broker-dealer agent, a financial writer, reporter, or analyst) without the approval of Morningstar's Legal and if applicable, Compliance teams.
- Neither Morningstar, Inc. or the Equity Research Group is a market maker or a liquidity provider of the security noted within this report.
- Neither Morningstar, Inc. or the Equity Research Group has been a lead manager or co-lead manager over the previous 12-months of any publicly disclosed offer of financial instruments of the issuer.
- Morningstar, Inc.'s investment management group does have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them.
- Morningstar, Inc. is a publicly traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section https://shareholders.morningstar.com/investor-relations/financials/sec-filings/default.aspx
- Morningstar, Inc. may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar, Inc.'s conflict of interest policies is available from http://global.morningstar.com/equitydisclosures. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

Risk Warning Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security's investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions.

For a list of securities which the Equity Research Group currently covers and provides written analysis on please contact your local Morningstar office. In addition, for historical analysis of securities covered, including their fair value estimate, please contact your local office.

For recipients in Australia: This Report has been issued and distributed in Australia by Morningstar Australasia Pty Ltd (ABN: 95 090 665 544; ASFL: 240892). Morningstar Australasia Pty Ltd is the provider of the general advice ('the Service') and takes responsibility for the production of this report. The Service is provided through the research of investment products.

To the extent the Report contains general advice it has been prepared without reference to an investor's objectives, financial situation or needs. Investors should consider the advice in light of these matters and, if applicable, the relevant Product Disclosure Statement before making any decision to invest. Refer to our Financial Services Guide (FSG) for more information at http://www.morningstar.com.au/fsg.pdf

For recipients in New Zealand: This report has been issued and distributed by Morningstar Australasia Pty Ltd and/or Morningstar Research Ltd (together 'Morningstar'). This report has been prepared and is intended for distribution in New Zealand to wholesale clients only and has not been prepared for use by New Zealand retail clients (as those terms are defined in the Financial Markets Conduct Act 2013).The information, views and any recommendations in this material are provided for general information purposes only, and solely relate to the companies and investment opportunities specified within. Our reports do not take into account any particular investor's financial situation, objectives or appetite for risk, meaning no representation may be implied as to the suitability of any financial product mentioned for any particular investor. We recommend seeking financial advice before making any investment decision.

For recipients in Hong Kong: The Report is distributed by Morningstar Investment Management Asia Limited, which is regulated by the Hong Kong Securities and Futures Commission to provide services to professional investors only. Neither Morningstar Investment Management Asia Limited, nor its representatives, are acting or will be deemed to be acting as an investment professional to any recipients of this information unless expressly agreed to by Morningstar Investment Management Asia Limited.

For recipients in India: This investment research is issued by Morningstar Investment Adviser India Private Limited. Morningstar Investment Adviser India Private Limited is registered with SEBI as a Portfolio Manager (registration number INP000006156) and as a Research Entity (registration number INH000008686). Morningstar Investment Adviser India Private Limited has not been the subject of any disciplinary action by SEBI or any other legal/regulatory body. Morningstar Investment Adviser India Private Limited is a wholly owned subsidiary of Morningstar Investment Management LLC. In India, Morningstar Investment Adviser India Private Limited has one associate, Morningstar India Private Limited, which provides data-related services, financial data analysis, and software development. The research analyst has not served as an officer, director, or employee of the fund company within the last 12 months, nor have they or their associates engaged in market-making activity for the fund company.The ESG-related information, methodologies, tool, ratings, data and opinions contained or reflected herein are not directed to or intended for use or distribution to India-based clients or users and their distribution to Indian resident individuals or entities is not permitted, and Morningstar/Sustainalytics accepts no responsibility or liability whatsoever for the actions of third parties in this respect.
