Newmont Earnings: Solid Start to 2026, Which We Think Will Mark a Trough in Production

Analyst Note Jon Mills, CFA, Equity Analyst, 29 Apr 2026

Newmont's first-quarter 2026 earnings were very strong, with realized gold prices 66% higher. Lower unit cash costs more than offset reduced sales volumes, with adjusted NPAT of USD 3.2 billion or USD 2.90 per share, up 125% on a year ago. It declared a 4% higher USD 0.26 quarterly dividend.

Why it matters: Guidance was maintained. We lower our unit cash cost estimates given the strong start to the year in cost control, and we also raise our dividend and share repurchase forecasts.

The bottom line: We reiterate our USD 72-per-share fair value estimate for no-moat Newmont. Shares trade in 1-star territory as spot gold of USD 4,600 per ounce remains more than double our USD 2,050 midcycle assumption based on our estimate of the long-run marginal cost of production.

Big picture: It is a solid start to a year that we think will mark a trough before production rises in the coming years. Attributable sales of 1.3 million ounces are around 25% of our full-year estimate for 5.3 million, down from 5.7 million in 2025 pro forma for the sale of six smaller, higher-cost mines.

- We forecast sales volumes to rise to around 6.2 million ounces in 2030. Increased production from its 38.5% and 40% stakes in the Nevada Gold Mines, or NGM, and Pueblo Viejo joint ventures with no-moat Barrick, respectively, and Lihir, Tanami, and Boddington drive the increase.
- In turn, this should lead to some improvement in unit cash costs and in its position around the middle of the gold industry cost curve.

Industry Gold

Business Description

Newmont is the world's largest gold miner. It bought Goldcorp in 2019, combined its Nevada mines in a joint venture with competitor Barrick later that year, and also purchased competitor Newcrest in November 2023. Its portfolio includes 11 mines and interests in two joint ventures in the Americas, Africa, Australia, and Papua New Guinea. The company is expected to sell roughly 5.3 million ounces of gold in 2026 from its continuing mines after selling six higher-cost, smaller mines following the Newcrest acquisition. Newmont also produces material amounts of copper, silver, zinc, and lead as byproducts. It had about two decades of gold reserves, along with significant byproduct reserves at the end of December 2025.

Between the lines: We think its focus on organic investment is sensible and more likely to create value for shareholders than a merger or acquisition.

- Along with a very strong balance sheet—net cash was about USD 3.2 billion at the end of March 2026—and share buybacks that are only somewhat dilutive, we maintain a Standard Capital Allocation Rating for now.

Business Strategy & Outlook Jon Mills, CFA, Equity Analyst, 29 Apr 2026

Newmont is the world's largest gold miner, with a portfolio reflecting three major deals in recent years. First, it acquired fellow gold producer Goldcorp for a relatively mild premium in 2019. Not only did it avoid paying a high price, Newmont also extracted better performance at mines where Goldcorp struggled.

Second, it combined its crown jewel Nevada assets with Barrick Gold's in a joint venture called Nevada Gold Mines, also in 2019. With Barrick as the operator, Newmont owns 38.5% of the partnership. It also acquired Australian-based gold miner Newcrest in 2023.

We forecast Newmont to increase attributable gold sales volumes from its continuing portfolio to around 6.2 million ounces in 2030, up from roughly 5.7 million in 2025 and 5.3 million in 2026. The increase is driven by higher gold production from its 38.5% and 40% stakes in the NGM and Pueblo Viejo joint ventures with Barrick, respectively, Lihir, Tanami, and Boddington. As part of bedding down the Newcrest acquisition, Newmont sold a number of its higher-cost, smaller mines in 2024 and 2025. These mines accounted for around 20% of total volumes in 2024.

It also produces material amounts of copper, silver, zinc, and lead as byproducts from its various gold mines. Newmont had about two decades of gold reserves along with significant byproduct reserves at end December 2025.

In aggregate, the company sits around the middle of the cost curve but we expect some improvement.

Bulls Say Jon Mills, CFA, Equity Analyst, 15 Apr 2026

- Newmont is the world's largest gold miner, with copper and other byproducts providing some diversification, representing around 15% of forecast midcycle revenue from 2030.
- The Nevada joint venture with Barrick is the largest gold producing area in the world, and will likely see even higher production in coming years.
- Gold companies tend not to follow general economic cycles. They can also provide a hedge to inflation risk.

Bears Say Jon Mills, CFA, Equity Analyst, 15 Apr 2026

- Bigger is not always better in gold mining. Newmont's operations span four continents, increasing

complexity and difficulty managing the assets.

- Newmont's unit cash costs are around the industry average, meaning it is more affected by falling gold prices than its lower-cost competitors.
- Gold is subject to the whims of investors, who can move as a herd and affect the gold price.

Economic Moat Jon Mills, CFA, Equity Analyst, 29 Apr 2026

As a commodity producer, Newmont is a price-taker and needs low-cost mines with long lives and a low installed capital base to support the longer-term excess returns needed to justify an economic moat.

We assign a no-moat rating to Newmont. It is placed around the middle of the curve for the gold industry's all-in sustaining costs. Due to the flatness of the industry cost curve, only miners in the lowest quartile tend to enjoy a material operating cost advantage. And that would need to be paired with an efficiently invested capital base and long reserve life to warrant a moat. Newmont's costs are

Newmont Corp NEM ★★ 15 May 2026 21:23, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
116.33 USD 14 May 2026	72.00 USD 15 Apr 2026 10:57, UTC	1.62	116.43 USD Bil 15 May 2026	None	Large Value	High	Standard	14 May 2026 05:00, UTC

not low enough to justify a moat, so we don't think Newmont exhibits a low-cost advantage.

Newmont's adjusted return on invested capital is similar to its weighted average cost of capital. We have included around USD 8.3 billion in asset and intangibles write-downs on the basis that the impairments relate to assets developed or acquired in the ordinary course of business and so should be included when calculating ROIC, as they are a normal part of doing business as a gold miner. Newmont's large invested capital base makes it unlikely that the firm will continue to generate economic returns in excess of its cost of capital, even if its operating costs were to materially fall. However, if the company were able to move into the lowest quartile of the cost curve, we would consider revisiting its moat rating.

The company averaged ROIC in the 10 years ended Dec. 31, 2025, of about 8%, while ROIC also averaged around 9.5% in the five years ended Dec. 31, 2025. We estimate that Newmont will generate a ROIC midcycle in 2030 similar to its WACC of about 8.5%. As such, we don't assign a moat to Newmont.

In terms of commodity prices used for our forecasts, our respective midcycle assumptions for gold and copper are about USD 2,050 per ounce and USD 3.80 per pound from 2030, based on our estimate of the marginal costs of production. We also assume silver prices of about USD 37 per ounce midcycle from 2030, being 1/55 of our assumed midcycle gold price. We assume zinc and lead average about USD 1.55 and USD 0.90 per pound, respectively, from 2027 based on spot prices.

Fair Value and Profit Drivers Jon Mills, CFA, Equity Analyst, 15 Apr 2026

We raise our fair value estimate for no-moat Newmont to USD 72 per share, up from USD 70, driven by higher gold prices.

We now assume gold averages around USD 4,900 per ounce from 2026 to 2028 based on the futures curve, up from about USD 4,700. Our assumed midcycle price is about USD 2,050 per ounce from 2030. This is based on our estimate of the long run marginal cost of production.

Cuing off the futures curve, our assumed average copper price from 2026 to 2028 falls to about USD 5.65 per pound, from around USD 5.85. Based on our estimate of the long run marginal cost of production, we assume a midcycle price of about USD 3.80 per pound from 2030.

We also assume silver averages about USD 65 per ounce from 2027 based on spot, reverting to around USD 37 per ounce midcycle from 2030, 1/55th of our assumed midcycle gold price.

We assume zinc and lead average about USD 1.55 and USD 0.90 per pound, respectively, from 2027 based on spot.

Cash flow is discounted at a weighted average cost of capital of 8.6%, based on a long-term capital

MORNINGSTAR®

Newmont Corp NEM ★★ 15 May 2026 21:23, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
116.33 USD 14 May 2026	72.00 USD 15 Apr 2026 10:57, UTC	1.62	116.43 USD Bil 15 May 2026	None	Large Value	High	Standard	14 May 2026 05:00, UTC

structure comprising 25% debt and 75% equity. We assume a 10.3% long-term cost of equity, reflecting gold's lack of systematic risk and correlation to GDP, with the company's higher exposure to sovereign risk meaning we think shareholders require additional return commensurate with this risk. We apply a 5.4% pretax cost of debt, reflecting what we expect Newmont's long-term cost of debt will be in a normalized interest-rate environment. Our implied terminal multiple of 8 times enterprise value/EBITDA is similar to the average we apply to other senior gold mining companies under our coverage.

Risk and Uncertainty Jon Mills, CFA, Equity Analyst, 29 Apr 2026

Our Morningstar Uncertainty Rating is High, reflecting cyclical gold prices, operating leverage, and high capital intensity, partly offset by a strong balance sheet. Newmont is highly leveraged to gold prices, which are a key determinant of future returns for shareholders. Another key driver is likely to be the company's investments, given the capital-intensive nature of the industry and the challenges of investing with a backdrop of cyclical gold prices.

All-in sustaining costs are around the industry average. The company faces less difficulty generating free cash flow than some of its higher-cost competitors, and its strong balance sheet provides further support as gold prices fluctuate.

Gold prices tend to be relatively uncorrelated to the broader economic cycle. Investment and jewelry make up most of global gold demand and a demand slowdown is the key risk to cash flows. A reduction in Chinese fixed-asset investment, lowering demand for copper, would also have some impact.

Gold has perceived countercyclical, safe-haven investment attributes and is seen as an inflation hedge. The key risk for gold is that, unlike most commodities that are consumed, virtually all the gold ever mined still exists. This makes gold subject to the whims of investors, who can move as a herd.

With much of its exposure in stable, mining-friendly jurisdictions, we think Newmont's overall portfolio carries only a moderate amount of geopolitical risk. In addition, its production is spread across four continents, providing some diversification to any specific country's geopolitical risk.

Gold mining carries many environmental, social, and governance risks, including risks from labor strikes, disagreements with local governments and communities, and the ever-present risk of mine accidents. In the longer term, the threat of environmental and community groups to new mining approvals could risk Newmont's social licence. This threat appears greatest in first-world countries.

Capital Allocation Jon Mills, CFA, Equity Analyst, 29 Apr 2026

Our Capital Allocation Rating for Newmont is Standard based on our framework that assesses the balance sheet, investment decisions, and shareholder distributions.

We view Newmont's balance sheet as strong, with net cash of USD 2.1 billion at the end of December 2025. We forecast the company to remain in a net cash position over our five-year forecast period.

MORNINGSTAR®

Newmont Corp NEM ★★ 15 May 2026 21:23, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
116.33 USD 14 May 2026	72.00 USD 15 Apr 2026 10:57, UTC	1.62	116.43 USD Bil 15 May 2026	None	Large Value	High	Standard	14 May 2026 05:00, UTC

We see Newmont's investments as fair. We view the 2019 acquisition of Goldcorp as an example of a good investment, as we think Newmont acquired Goldcorp below its fair value estimate, with Goldcorp's struggles in recent years weighing on its price. However, operating in an industry where companies struggle to create moats weighs on Newmont's ability to strengthen its competitive advantage through investment.

We think distributions are appropriate, comprising a quarterly dividend to USD 26 cents from early 2026 and a share-repurchase program, which had USD 2.4 billion remaining then. We think this means it can pay reasonable distributions without sacrificing investments or balance sheet health. We favor further cash returns to shareholders in the absence of value-creating acquisitions or extensions and expansions of existing mines.

Natascha Viljoen replaced Tom Palmer as Newmont's CEO in January 2026 and we don't expect major changes to the company's strategy under her leadership.

Analyst Notes Archive

Gold Miners: Our Coverage Is Expensive Despite Raising Our Near-Term Gold Price Assumptions Again Jon Mills, CFA,Equity Analyst,15 Apr 2026

After reaching another historical high around USD 5,400 per ounce in January, gold belied its safe haven status by falling 20% in response to the Iran war, before recovering to around USD 4,800 now. The fall was driven by ETF outflows: ETFs tend to be procyclical and the marginal buyers or sellers. Why it matters: But gold is still up since we last updated our assumed prices. We now assume it averages USD 4,900 to 2028, from USD 4,700, based on the futures curve. Our assumed midcycle price remains about USD 2,050 from 2030 based on our estimate of the marginal cost of production. We also raise our Uncertainty Ratings for no-moat Newmont, Barrick, and Agnico Eagle to High, from Medium, consistent with our High ratings for no-moat Kinross, Northern Star, Evolution, and Perseus. All are highly leveraged to the gold price, which is the biggest driver of their fair values. The bottom line: Increased near-term gold price assumptions drive no-moat Kinross's fair value estimate up 5% to USD 10 per share. Our fair value estimates for no-moat Newmont, Barrick, and Agnico Eagle each rise 3% to USD 72, USD 31, and USD 93 per share, respectively. But foreign-exchange movements since our last update have broadly offset higher near-term gold prices for no-moat Northern Star and Evolution. Their fair values are unchanged at AUD 15 and AUD 4.70, respectively. Perseus's estimate rises by 7% to AUD 3.20 per share after it surprised us by selling its troubled Meyas Sand project in Sudan for more than double our valuation, despite the ongoing civil war in the country. Big picture: Our gold coverage is materially overvalued by about 40% to 240% as the market projects the very strong gold bull market in recent years to continue. Spot gold has tripled since September 2022, and is more than double our assumed long-term or midcycle price of around USD 2,050. It is also significantly above both historical prices and cost support.

MORNINGSTAR®

Newmont Corp NEM ★★ 15 May 2026 21:23, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
116.33 USD 14 May 2026	72.00 USD 15 Apr 2026 10:57, UTC	1.62	116.43 USD Bil 15 May 2026	None	Large Value	High	Standard	14 May 2026 05:00, UTC

Newmont Earnings: Very Strong Due to the Soaring Gold Price Jon Mills, CFA,Equity Analyst,27 Feb 2026

Higher gold prices more than offset lower volumes on flat unit cash costs in Newmont's 2025 fourth-quarter result. Adjusted NPAT rose 73% to USD 2.8 billion or USD 2.52 per share. Full-year adjusted NPAT of USD 7.6 billion—EPS of USD 6.89—is up 91%, with the gold bull market the main driver.Why it matters: While shares closed tad lower on the day, results were broadly in line with our estimate, as was guidance. However, Newmont lifted its quarterly dividend by 4% to USD 0.26, above our USD 0.25 forecast. The bottom line: Shares for no-moat Newmont screen as expensive against our unchanged USD 70 per share fair value estimate, with the gold bull market showing no sign of ending. At about USD 5,200 per ounce, spot gold is more than double our assumed midcycle price of USD 2,050 from 2030 based on our estimate of the long-run marginal cost of production. Long view: We expect sales volumes from its continuing portfolio to increase to around 6.2 million ounces in 2030, from about 5.7 million in 2025 and 5.3 million in 2026. It sold six smaller, higher-cost mines after its acquisition of Newcrest in 2023. Volumes were driven by higher production from its 38.5% and 40% stakes in the Nevada Gold Mines and Pueblo Viejo joint ventures with Barrick, respectively, and Lihir, Tanami, and Boddington. Bulls say: The gold price will stay elevated, and the midcycle gold price is materially higher than our USD 2,050 assumption. But shares still trade about one-third above our bull-case fair value of USD 95. Our bull scenario assumes gold averages about USD 5,700 per ounce from 2026-28 and around USD 2,450 midcycle, about 20% above our base -ccase assumptions. Key stats: The balance sheet is pristine, with net cash of USD 2.1 billion at end-December 2025, and we think the increased quarterly dividend is sensible, albeit modest. However, given we think it is overearning due to the incredible gold bull market, continued procyclical share buybacks seem value-decretive to us.

Gold Miners: We Raise Our Near-Term Gold Price Assumptions, but Our Coverage Is Overvalued Jon Mills, CFA,Equity Analyst,13 Jan 2026

After a brief pullback in October, the gold price resumed its relentless rise and is now trading at yet another historical high of around USD 4,600 per ounce. Concerns over the Fed's independence add to strong ETF and central bank purchases and ongoing US fiscal deficits as major tailwinds. Why it matters: Based on the futures curve, we now assume average prices of about USD 4,700 per ounce from 2026 to 2028, up from USD 4,000. We also roll forward our assumed midcycle price to 2030, from 2029, being about USD 2,050 based on our estimate of the long-run marginal cost of production. The bottom line: Higher assumed near-term gold prices see the fair value estimates for our gold coverage rise by between 9% and 14%. But the higher gold price is more than reflected in the shares, and our coverage is materially overvalued by between 60% and 265%. Our fair value estimate for no-moat Agnico Eagle rises 14% to USD 80 per share. Our fair value estimates for no-moat Newmont, Kinross, and Evolution increase 13% to USD 70, USD 9, and AUD 4.50, respectively. Our updated estimate for no-moat Barrick is

Newmont Corp NEM ★★ 15 May 2026 21:23, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
116.33 USD 14 May 2026	72.00 USD 15 Apr 2026 10:57, UTC	1.62	116.43 USD Bil 15 May 2026	None	Large Value	High	Standard	14 May 2026 05:00, UTC

now USD 30, up 11%, while no-moat Northern Star's and Perseus' estimates rise 9% to AUD 15 and AUD 3, respectively. Between the lines: Even with unit cash costs increasing across the industry in recent years due to inflation, the historically high gold price means we forecast higher near-term margins across our coverage compared to their historical averages. However, we assume margins return to around their historical averages midcycle, albeit adjusted where applicable for forecast changes in production volumes of existing mines and the company's mine portfolio. Along with our assumption that the gold price returns to being driven by fundamentals based on supply and demand rather than by price-insensitive central bank purchases and pro-cyclical ETF flows, this accounts for the material overvaluation of our gold coverage.

Newmont Earnings: Higher Gold Prices Drive Higher Earnings Jon Mills, CFA,Equity Analyst,24 Oct 2025

Newmont's third-quarter earnings were once again strong. Higher gold prices and reduced unit cash costs more than offset lower sales volume. Adjusted EBITDA rose about 70% to USD 3.3 billion, and the USD 0.25 quarterly dividend is unchanged. Shares were down 5% after the release.Why it matters: While Newmont reiterated 2025 volume and unit cash cost guidance, we think investors were disappointed by moderately lower 2026 volume guidance due to mine plan sequencing. Also, 2026 capital expenditure will be higher as a portion is deferred from this year. We still expect around 5.8 million attributable ounces in 2025, or 5.6 million excluding volume from six smaller, higher-cost mines that are now sold. But we now forecast 5.4 million attributable ounces in 2026, down from 5.6 million previously, with 2027 and 2028 volume also down slightly. Lower near-term volume is offset by our reduced forecast for near-term all-in sustaining costs before byproduct credits, which are tracking lower than we expected so far in 2025. Our longer-term volume and unit cash cost forecasts are broadly unchanged.The bottom line: We reiterate our USD 62/AUD 95 fair value estimate for no-moat Newmont. The shares appear materially overvalued, thanks to euphoria in the gold markets. At about USD 4,100 per ounce, the spot gold price is double our assumed midcycle price of USD 2,000 based on our estimate of the long-run marginal cost of production.Long view: We expect sales volume to rise to around 6.3 million ounces in 2029. The increase is driven by higher production from Newmont's 38.5% and 40% stakes in the Nevada Gold Mines and Pueblo Viejo joint ventures with Barrick as well as Lihir, Tanami, and Boddington. Between the lines: The balance sheet is very strong, with essentially no net debt at Sept. 30. However, we think the company should consider hedging a portion of future sales volume to take advantage of gold prices rising about 55% in 2025 to near historical highs.

Spot Gold Price Pulls Back, Sending Shares of Miners Materially Lower Jon Mills, CFA,Equity Analyst,22 Oct 2025

The gold price has been surging in 2025, reaching about USD 4,380 per ounce recently, another historical high, and up almost 70% this year. However, prices have pulled back and are now down 6%, to

Newmont Corp NEM ★★ 15 May 2026 21:23, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
116.33 USD 14 May 2026	72.00 USD 15 Apr 2026 10:57, UTC	1.62	116.43 USD Bil 15 May 2026	None	Large Value	High	Standard	14 May 2026 05:00, UTC

about USD 4,100 at the time of writing. Silver and platinum prices are also materially lower. Why it matters: Lower spot gold sees our gold mining coverage shares down by between 9% and 11%. Due to operating leverage, miner share prices tend to move around more on the upside and downside than changes in commodity prices. The bottom line: Our gold miner fair value estimates are unchanged, with shares still overvalued between 20% and almost 200%. Spot gold is still more than double our assumed midcycle or long-term price of about USD 2,000 based on our estimate of the marginal cost of production. We can't predict changes in near-term gold prices nor when they will occur. However, given the extremely bullish sentiment driving the gold price, odds are well in investors' favor that it will come down further over the long term, and there will likely be better opportunities to buy gold miners. On the other hand, sentiment drives near-term gold prices. As such, euphoria could well carry on for a while yet, sending gold prices back higher in the short term. Big picture: Neither clients nor the media were very interested in gold when we recommenced coverage of no-moat Newmont, Barrick, Agnico Eagle, and Kinross Gold in April 2023, with gold around USD 2,000 then. Yet now investor interest in gold has reached a fever pitch, showing the cyclicality in sentiment. Other contra indicators include people lining up to buy gold and exchange-traded funds receiving large inflows. Fear of missing out can be a powerful force, particularly manifesting in demand for ETFs, which tend to be the marginal buyers of gold and often key drivers of near-term prices.

Our Coverage of Miners Is Expensive Despite Increasing Our Near-Term Gold Price Assumptions Jon Mills, CFA,Equity Analyst,3 Oct 2025

The gold bull market continues. Now around USD 3,850 per ounce, gold is up 47% so far in 2025 and near historical highs. Safe-haven buying is a major driver, led by strong ETF and central bank purchases, with ongoing US fiscal deficits, a weaker US dollar, and lower real interest rates assisting. Why it matters: We now assume gold averages about USD 3,700 per ounce from 2025 to 2027 based on the futures curve, up from around USD 3,450. However, our assumed midcycle gold price is unchanged, at about USD 2,000 per ounce from 2029, based on our estimate of the marginal cost of production. The bottom line: Despite increases to our fair value estimates driven by higher near-term gold price assumptions, our gold miners' coverage is materially overvalued. We raise our fair value for no-moat Newmont to USD 62 and for no-moat Kinross Gold to USD 8 per share, both up 7%. Our updated estimates for no-moat Agnico Eagle, Barrick, and Perseus Mining are USD 70, USD 27, and AUD 2.75, respectively, up 6%. We also increase our fair value estimates for no-moat Evolution Mining and Northern Star by 5% to AUD 4.00 and AUD 13.70 per share, respectively. Big picture: After generally lagging the rising gold price, miner shares have risen dramatically in 2025, from 55% for Northern Star to 175% for Kinross as investors project historically high gold prices far into the future. We acknowledge that the short-term tailwinds supporting prices, exacerbated by exchange-traded fund purchases, tend to be procyclical, and central banks are generally not price-sensitive. We also acknowledge gold's other attributes of being a store of value and medium of exchange, unlike most other commodities. However,

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment[1]
116.33 USD 14 May 2026	72.00 USD 15 Apr 2026 10:57, UTC	1.62	116.43 USD Bil 15 May 2026	None	Large Value	High	Standard	14 May 2026 05:00, UTC

in the longer term, we expect the price of gold to return to its fundamentals, based on supply/demand. Higher prices incentivize new supply and dampen demand, pushing gold toward the long-run marginal cost of production, which we view as about USD 2,000 per ounce midcycle from 2029.

ESG Risk Rating Breakdown

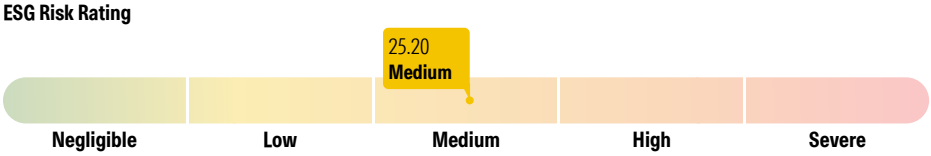

Exposure	
Company Exposure[1]	72.0
– Manageable Risk	65.1
Unmanageable Risk[2]	**6.9**
Management	
Manageable Risk	65.1
– Managed Risk[3]	46.7
Management Gap[4]	**18.4**
Overall Unmanaged Risk	**25.2**

- Exposure represents a company's vulnerability to ESG risks driven by their business model
- Exposure is assessed at the Subindustry level and then specified at the company level
- Scoring ranges from 0-55+ with categories of low, medium, and high-risk exposure

- Management measures a company's ability to manage ESG risks through its commitments and actions
- Management assesses a company's efficiency on ESG programs, practices, and policies
- Management score ranges from 0-100% showing how much manageable risk a company is managing

ESG Risk Rating

ESG Risk Ratings measure the degree to which a company's value is impacted by environmental, social, and governance risks, by evaluating the company's ability to manage the ESG risks it faces.

1. A company's Exposure to material ESG issues 2. Unmanageable Risk refers to risks that are inherent to a particular business model that cannot be managed by programs or initiatives 3. Managed Risk = Manageable Risk multiplied by a Management score of 71.8% 4. Management Gap assesses risks that are not managed, but are considered manageable 5. ESG Risk Rating Assessment = Overall Unmanaged Risk = Management Gap plus Unmanageable Risk

ESG Risk Rating Assessment[5]

ESG Risk Rating is of May 14, 2026. Highest Controversy Level is as of May 08, 2026. Sustainalytics Subindustry: Gold. Sustainalytics provides Morningstar with company ESG ratings and metrics on a monthly basis and as such, the ratings in Morningstar may not necessarily reflect current Sustainalytics' scores for the company. For the most up to date rating and more information, please visit: sustainalytics.com/esg-ratings/.

Peer Analysis 14 May 2026

Peers are selected from the company's Sustainalytics-defined Subindustry and are displayed based on the closest market cap values

MORNINGSTAR®

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, indepth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss shortterm market-price movements), but we believe these negatives are mitigated by deep analysis and our longterm approach.

Morningstar's equity research group ("we," "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our singlepoint star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

When considering a company's moat, we also assess whether there is a substantial threat of value destruction, stemming from risks related to ESG, industry disruption, financial health, or other idiosyncratic issues. In this context, a risk is considered potentially value destructive if its occurrence would eliminate a firm's economic profit on a cumulative or midcycle basis. If we deem the probability of occurrence sufficiently high, we would not characterize the company as possessing an economic moat.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in workingcapital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

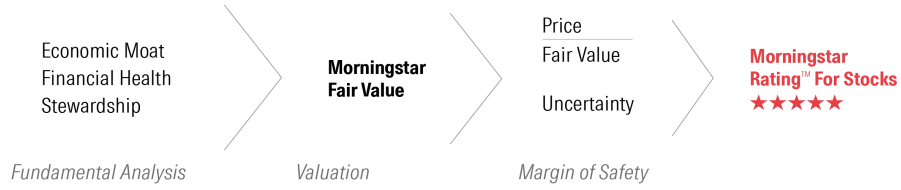

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total present value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty Around That Fair Value Estimate

Morningstar's Uncertainty Rating is designed to capture the range of potential outcomes for a company's intrinsic value. This rating is used to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating is aimed at identifying the confidence we should have in assigning a fair value estimate for a given stock.

Our Uncertainty Rating is meant to take into account anything that can increase the potential dispersion of future

MORNINGSTAR®

Research Methodology for Valuing Companies

outcomes for the intrinsic value of a company, and anything that can affect our ability to accurately predict these outcomes. The rating begins with a suggested rating produced by a quantitative process based on the trailing 12-month standard deviation of daily stock returns. An analyst overlay is then applied, with analysts using the suggested rating, historical rating data, and their own knowledge of the company to inform them as they make the final Uncertainty Rating decision. Ultimately, the rating decision rests with the analyst. Analysts take into account many characteristics when making their final decision, including cyclical factors, operational and financial factors such as leverage, company-specific events, ESG risks, and anything else that might increase the potential dispersion of future outcomes and our ability to estimate those outcomes.

Our recommended margin of safety—the discount to fair value demanded before we'd recommend buying or selling the stock—widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the potential dispersion of outcomes, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the Uncertainty Rating provides guidance in portfolio construction based on risk tolerance.

Our Uncertainty Ratings are: Low, Medium, High, Very High, and Extreme.

	Margin of Safety	
Qualitative Analysis Uncertainty Ratings	★★★★★Rating	★Rating
Low	20% Discount	25% Premium
Medium	30% Discount	35% Premium
High	40% Discount	55% Premium
Very High	50% Discount	75% Premium
Extreme	75% Discount	300% Premium

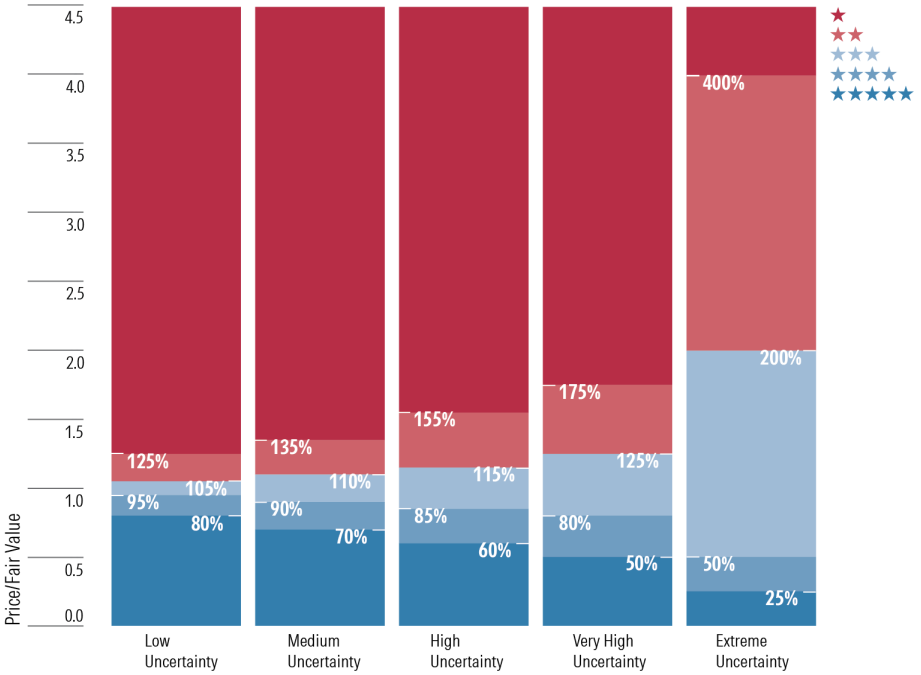

Our uncertainty rating is based on the interquartile range, or the middle 50% of potential outcomes, covering the 25th percentile–75th percentile. This means that when a stock hits 5 stars, we expect there is a 75% chance that the intrinsic value of that stock lies above the current market price. Similarly, when a stock hits 1 star, we expect there is a 75% chance that the intrinsic value of that stock lies below the current market price.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more details about our methodology, please go to https://shareholders.morningstar.com

Morningstar Equity Research Star Rating Methodology

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

★★★★★ We believe appreciation beyond a fair risk adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

★★★★ We believe appreciation beyond a fair risk-adjusted return is likely.

★★★ Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

★★ We believe investors are likely to receive a less than fair risk-adjusted return.

★ Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments,

Research Methodology for Valuing Companies

and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments, and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Sustainalytics ESG Risk Rating Assessment: The ESG Risk Rating Assessment is provided by Sustainalytics; a Morningstar company.

Sustainalytics' ESG Risk Ratings measure the degree to which company's economic value at risk is driven by environment, social and governance (ESG) factors.

Sustainalytics analyzes over 1,300 data points to assess a company's exposure to and management of ESG risks. In other words, ESG Risk Ratings measures a company's unmanaged ESG Risks represented as a quantitative score. Unmanaged Risk is measured on an open-ended scale starting at zero (no risk) with lower scores representing less unmanaged risk and, for 95% of cases, the unmanaged ESG Risk score is below 50.

Based on their quantitative scores, companies are grouped into one of five Risk Categories (negligible, low, medium, high, severe). These risk categories are absolute, meaning that a 'high risk' assessment reflects a comparable degree of unmanaged ESG risk across all subindustries covered.

The ESG Risk Rating Assessment is a visual representation of Sustainalytics ESG Risk Categories on a 1 to 5 scale. Companies with Negligible Risk = 5 Globes, Low Risk = 4, Medium Risk = 3 Globes, High Risk = 2 Globes, Severe Risk = 1 Globe. For more information, please visit sustainalytics.com/esg-ratings/

Ratings should not be used as the sole basis in evaluating a company or security. Ratings involve unknown risks and uncertainties which may cause our expectations not to occur or to differ significantly from what was expected and should not be considered an offer or solicitation to buy or sell a security.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of the report is Morningstar Research Services LLC, a U.S.A. domiciled financial institution.

This Report is for informational purposes, should not be the sole piece of information used in making an investment decision, and has no regard to the specific investment objectives, financial situation or particular needs of any specific recipient. This publication is intended to provide information to assist investors in making their own investment decisions, not to provide investment advice to any specific investor. Therefore, investments discussed herein may not be suitable for all investors; investors must exercise their own independent judgment as to the suitability of such investments and recommendations in the light of their own investment objectives, experience, taxation status and financial position. Morningstar encourages Report recipients to read all relevant issue documents (e.g., prospectus) pertaining to the security concerned, including without limitation, information relevant to its investment objectives, risks, and costs before making an investment decision and when deemed necessary, to seek the advice of a financial, legal, tax, and/or accounting professional. The information, data, analyses and opinions presented herein are not warranted to be accurate, correct, complete or timely. Unless otherwise provided in a separate agreement, neither Morningstar, Inc. or the Equity Research Group represents that the report contents meet all of the presentation and/or disclosure standards applicable in the jurisdiction the recipient is located.

Except as otherwise required by law or provided for in a separate agreement, the analyst, Morningstar, Inc. and the Equity Research Group and their officers, directors and employees shall not be responsible or liable for any trading decisions, damages or other losses resulting from, or related to, the information, data, analyses or opinions within the report.

The Report and its contents are not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Morningstar, Inc. or its affiliates to any registration or licensing requirements in such jurisdiction.

Where this report is made available in a language other than English and in the case of inconsistencies between the English and translated versions of the report, the English version will control and supersede any ambiguities associated with any part or section of a report that has been issued in a foreign language. Neither the analyst, Morningstar, Inc., or the Equity Research Group guarantees the accuracy of the translations.

This report may be distributed in certain localities, countries and/or jurisdictions ("Territories") by independent third parties or independent intermediaries and/or distributors ("Distributors"). Such Distributors are not acting as agents or representatives of the analyst, Morningstar, Inc. or the Equity Research Group. In Territories where a Distributor distributes our report, the Distributor is solely responsible for complying with all applicable regulations, laws, rules, circulars, codes and guidelines established

Research Methodology for Valuing Companies

by local and/or regional regulatory bodies, including laws in connection with the distribution third-party research reports.

Conflicts of Interest

- No interests are held by the analyst with respect to the security subject of this investment research report.
- Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com
- Analysts' compensation is derived from Morningstar, Inc.'s overall earnings and consists of salary, bonus and in some cases restricted stock.
- Neither Morningstar, Inc. or the Equity Research Group receives commissions for providing research nor do they charge companies to be rated.
- Morningstar's overall earnings are generated in part by the activities of the Investment Management and Research groups, and other affiliates, who provide services to product issuers.
- Morningstar employees may not pursue business and employment opportunities outside Morningstar within the investment industry (including but not limited to, working as a financial planner, an investment professional or investment professional representative, a broker-dealer or broker-dealer agent, a financial writer, reporter, or analyst) without the approval of Morningstar's Legal and if applicable, Compliance teams.
- Neither Morningstar, Inc. or the Equity Research Group is a market maker or a liquidity provider of the security noted within this report.
- Neither Morningstar, Inc. or the Equity Research Group has been a lead manager or co-lead manager over the previous 12-months of any publicly disclosed offer of financial instruments of the issuer.
- Morningstar, Inc.'s investment management group does have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them.
- Morningstar, Inc. is a publicly traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section https://shareholders.morningstar.com/investor-relations/financials/sec-filings/default.aspx
- Morningstar, Inc. may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar, Inc.'s conflict of interest policies is available from http://global.morningstar.com/equitydisclosures. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

Risk Warning Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security's investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions.
